THE MONEY OUTLOOK.

THERE is practically no change to report in the Money market. Short loans remain at about 4 to 4½%, while discount rates are still at about 5¼-5⅜%, for three months' bills, 5⅛% for four months', and 5⅛%-5⅜% for six months' drafts. The rates for Treasury Bills of all currencies are unchanged at 5%. The main factor in the situation is the strength of the American Exchange and the preparations that are being made to provide all the money needed to meet our foreign purchases in the next few months.

Gold continues to be exported in moderate amount even to the United States, although the exports are nearly balanced by imports. The countries to which gold has been sent in the past week include the United States, Canada, Spain, Egypt, Uruguay, Holland, and South America generally. It is possible, however, that the new Exchequer bonds, which are free of income tax to foreign holders, will very materially

assist in checking the gold shipments to those miscellaneous countries. Hitherto it has been somewhat difficult to find securities which other countries would take in payment of their trade balances, but now that they can buy British Exchequer bonds to give them a return of 5% over and above the great profits they are making on our purchases, no very great difficulty should be experienced in meeting the adverse balance of trade.

Obviously, if all countries which are selling goods to us in such large amounts at the present time were to ask for payment in gold, the British people would immediately reduce their purchases of foreign goods, as they very easily could do, and if other nations wish to sell goods as freely to this country in the future as they are now doing, it is obvious they must take payment for a large part of them in securities. Hence the new Exchequer bonds or British Treasury bills, which are also free of income tax, are specially adapted for this purpose. Of course it will be realised that large amounts of gold are being produced in South Africa, Australia, and elsewhere, and are available for the payment of foreign goods bought by this country, that Great Britain still possesses a large amount of gold, and that further supplies can be obtained from France and Russia. Nevertheless, the purchases of goods by the Allied nations from foreign countries are so large that the amount cannot possibly be maintained at the present level unless those countries are willing to take payment in securities after the manner of the United States.

In the current year America's favourable trade balance will probably reach £350,000,000, and, allowing for foreign payments for interest, shipping, gold imports, &c., a balance of nearly £200,000,000 has been settled in securities by this and other countries. Probably next year the balance in favour of the States will be still greater, and this again will be settled in securities. It will be obvious that the Allied nations cannot continue to purchase the great quantity of goods they are now buying unless they pay mainly in securities. Having regard to this well-known fact, we anticipate that the new issue of 5% Five-Year Exchequer bonds at par will have a very substantial effect in strengthening the foreign exchanges not only with the United States but with other countries also.

BANK OF ENGLAND.

On balance for the week ended Wednesday £445,000 in gold was withdrawn from the Bank of England for export, but against this £453,000 came in from the country, and the total gold held thus showed an increase of £8,000 for the week. The amount is now £50,281,000. The reserve declined £103,000 to £34,464 000 in consequence of an expansion of £112,000 in the note circulation. There was an increase of £4,150,000 in the "other" deposits in consequence of an addition of £3,955,000 to the "other" securities, and the public deposits declined £308,000. The amount of the public deposits is now £52,136,000, of "other" deposits £94,169,000, and "other" securities £96,865,000. The proportion of reserve to liabilities is slightly lower at 24·55%.

MONEY IN NEW YORK.

The exchange is firm, and is now about 4 72, after having fallen during the week to 4 71⅜. The strength of the exchange arises from the substantial sales in New York of British-owned American securities and from the payment of American goods bought by the British Government out of the proceeds of the Anglo-French loan. The bankers' credit of £10,000,000, which was drawn by eight of the largest London banks, four of whom are each good for $7,500,000 of the credit, and the other four for $5,000,000 each, is also instrumental in maintaining the exchange. Beyond this bankers' credit of £10,000,000 it is understood that two further credits of £10,000,000 each, making £30,000,000 in all, will be created if necessary by the Exchange Committee, so that at the present moment, what with the Anglo-French loan, of £100,000,000, the bankers' credits of £30,000,000, and the sales of American securities, both direct to America and to the Treasury, the amount of money available for purchase of American goods is very large, and will take care of the situation for some time to come. It should, however, be recognised that this country is practically responsible for America's entire trade balance, and that the amount of exchange needed to supply the balance during the coming few months will be very large. The reserves of the New York banks last week showed very little change, but inasmuch as their loans increased £3,500,000, and their deposits increased £3,000,000, the surplus reserves were reduced over £400,000 to £35,604,000. Money in New York is practically a drug, and loans for the day are obtainable at 2% and under.

The Irving National Bank of New York notify us by cable that the following rates of exchange are current in New York:—

SILVER.

The price of Silver has fallen sharply this week from 26⅞*d.* to 25⅛*d.* in consequence of heavy selling from China, supplemented by offerings from India. Apparently the selling from China is due to the political situation in that country and to the decision of the President to accept the title of Emperor. It would appear, however, that China desires this change, and that, inasmuch as the ceremony is to be postponed until a favourable opportunity occurs, the change will be effected without serious opposition.

	Dec. 10	11	13	14	15	16	17
London ...	26⅞	26⅝	26 1/16	26 1/16	26⅛	25 15/16	25 15/16

Exchange ...	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32

POSITION IN INDIA.

Exchange from India remains firm at 1*s.* 4 3/32*d.*, and the applications for the 50 lacs of Council drafts offered on Wednesday amounted to nearly 451 lacs. The trade balance in favour of India under normal circumstances would call for very much larger remittances than are now being made, but evidently a large part of the money realised from the sale of Indian goods in this country is being retained here. In October the imports of goods into India were valued at 11½ crores, while exports were worth nearly 18 crores, so that there was an excess of 6½ crores of exports over imports. Last year in October the imports were over 12 crores and the exports no more than 10 crores. A favourable balance of over 6 crores of rupees in one month indicates that India is in a position to import a very large amount of treasure. In the seven months to the end of October the value of the net imports was only 74 crores, against 84 crores last year, while the exports were nearly 110 crores, or half a crore larger than last year. Hence this year the excess of exports was no less than 35 crores, against 24 crores in the corresponding months of last year. With this movement of trade the net imports of treasure amounted this year in the seven months to only 9 crores, against 17 crores last year. All this indicates that the withdrawal of British floating capital from India in the current year has been very substantial, and that when a normal situation is resumed and a great outward movement of British capital

occurs, the imports into India will show great increase, and that probably the imports of treasure, both gold and silver, may be substantial. The stock of silver in the Currency Department fell 173 lacs last week to 3,187 lacs. On the other hand, the gold held increased 200 lacs to 1,037 lacs. At this time last year the stock of coined silver was 3,006 lacs and the stock of gold 874 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) | Bengal ... 6 per cent. (Sept. 24, '15)

Stock Exchange.

Settlement Days	Ticket Day.	Pay Day.	Consols.
	Wed., Dec. 29	Thurs., Dec. 30	Wed., Jan. 5

We believe the fixing of a Stock Exchange holiday upon December 24 is an unprecedented occurrence. Usually the day before Christmas has been one of the three days given to the completion of the Settlement; especially has this been so when Christmas has fallen upon a Saturday. But there is no occasion this year to fix up matters regarding a date which usually falls on a day when contangos are arranged.

There are two points in connection with the American department. One is the desire that the rate of exchange shall be steadied and strengthened by the sale to the Americans of their securities. Shares and bonds of railway, industrial, &c., companies are in great request in the United States, consequent on the prosperity of the country as a whole. This has not been confined to the manufacturers both directly and indirectly engaged in the supply of European munition, food, &c., requirements, but has also been enjoyed by the farming community, which, in addition to securing enormous crops, has the ability to sell them at very good prices indeed.

The pourparlers as between the British Government and the big institutions, such as insurance companies and trusts, holding American securities, especially bonds, are conducted by men who understand exactly what they are doing and who need no advice; but there is a large class of investors who do not enter into direct negotiations, but to whom the advice may be given that they will assist this country if they dispose of their American investments and so contribute to the strengthening of the exchange rate between the United States and this country.

The Stock Exchange Committee, in accordance with arrangements made with the Treasury, have relaxed the hard-and-fast rule hitherto existent as to "physical possession," and it is now permissible for inhabitants of neutral and Allied countries to effect realisations of American securities through the London Stock Exchange. This relaxation is to apply comprehensively to "North American" securities; consequently, besides the mass of American railway and industrial shares and bonds, it also applies to some large Canadian issues in which there are free international transactions. It also applies to Mexican securities, but here there is little likelihood of any appreciable business being conducted. Those who hold Mexican securities at the current range of prices will be indisposed to cut losses.

What is tersely known as the mobilisation plan in connection with American securities has been much discussed in the Stock Exchange. We have ourselves in the past dealt with this subject, and recur again to it elsewhere this week, but it will be of interest to a great number of persons to take note of how prices of representative American shares and bonds stand now in contrast with what prices were immediately before the declaration of war. We give the table below:—

	July 1914	Dec. 1915
Atchison Common	97	112

,, ,, 4% Conv. Bonds	90½	100

URUGUAY EAST COAST RAILWAY.

Like other parts of Uruguay, the district served by the Uruguay East Coast Railway has suffered in the past two years from the adverse trade conditions as well as from bad weather, and the European War has naturally accentuated the depression. In 1913-14 the gross receipts of the line declined $18,678, or 9.6%; and in the past twelve months there has been a further diminution of $31,256, or 17.9%. By the exercise of the strictest economy a considerable saving in working expenses has been effected; nevertheless, the net earnings at $19,327 show a loss of no less than $21,662, of 52.8%, compared with 1913-14, and of over $20,000 compared with two years ago. In sterling, the net receipts amount to £4,112, as against £8,721 last year, and £8,384 in 1912-13. Including the Government guarantee and sundry other items, the total net income for the year reaches £24,226, which is some £2,680 short of the sum needed for interest charges, taxes, &c. Moreover, no amount has been set aside for sinking fund purposes during the year, and the directors, after consultation with some of the larger bond and stock holders, are preparing a scheme of arrangement which, it is hoped, will meet with the approval of all concerned.

Mining Topics.

For the better part of the week the market for Rand mining descriptions presented a heavy appearance, and the feature we last week called attention to—of realisations of profits, in Eastern Rand shares in particular, was this week again noticeable. Subsequently, however, there were rallies in this section, though not to the extent of the previous falls. Shares of mining companies operating in the Central Rand have also been dull; City Deep momentarily descending to a trifle under 3½. In part this may have been due to the reduction in the City and Suburban dividend from 7½% December last year to 6¼% this. The City Deep itself earned considerably more than the dividend of 20% which it declared, which contrasts with 12½% last year. Both the Modderfontein and the Modder B have increased their dividends; the Modderfontein declaring 16¼%, making 32½% for the twelve months to December 31, against 30% for the corresponding period last year; the financial year, however, ends June 30. The Modder B distributes 35%, against 30% a year ago. The Modder Deep 25%, added to 10% in June, makes the first year's dividend 35%. Geduld conservatively distributes only 5%, making 10% for the year. In June last the Crown Mines increased its dividend rate from 30% in December 1914 to 35%, and it now announces for December a 30% distribution. As the Rand Mines has a very large holding in the Crown Mines its dividend is necessarily affected, being 80% against 90% last year. Another descent in dividend is that of the Robinson G.M. Co., which distributes only 6% against 9% last year, making 14% for the whole of 1915, against 28% (including bonus) for 1914. This is a Company owning a mine with a very short life. Much disappointment has been felt at the drastic cutting down of the Van Ryn dividend from 22½% December last year to its present declaration of 17½%. Witwatersrand Deep has also reduced its dividend, being 13¾%, against 17½%. An improvement is shown by the Brakpan dividend, which is 22½% against 17½% last year. The record of dividends in contrast with the three previous half-years, and giving also the total dividends for 1913 and 1914, is set out below:—

Dividends.—In the following table we contrast the South African dividends so far announced in 1915 with the distributions of each half of and full year 1914 and year 1913:—

	1913	1914			1915

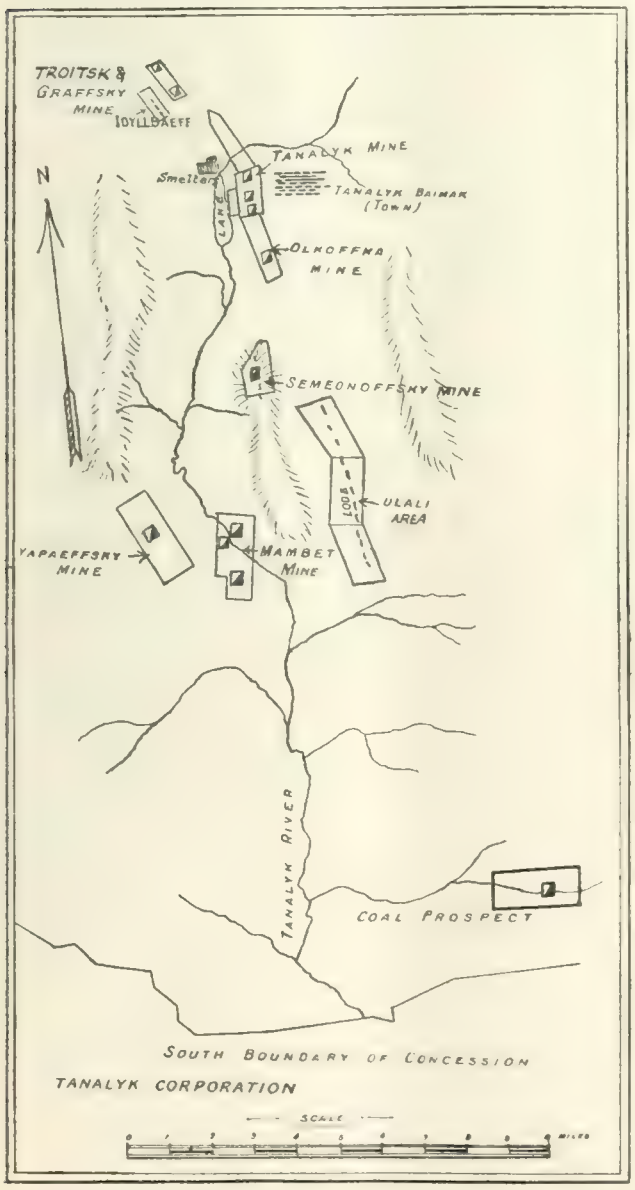
‡ 10% bonus included.

The May distributes a 1s. dividend. This is derived from the Company's shareholding in Modder Deep.

Nothing of import has occurred in the Rhodesian market. The Shamva has declared another dividend of 7½%, making a total so far for the current year of 27½%.

There have been few features in the Miscellaneous departments. Copper descriptions have varied but slightly; the movement in the price of the metal does not affect the market to the extent it used to do in normal days, the reason being that the price for

"standard" copper is not such a criterion of the state of the industry as it used to be, as explained in THE STATIST of December 11.



Broken Hill shares have reacted after their recent fairly protracted spell of strength.

A feature of the week has been the rise in Alaska United shares to 4⅜ on reported buying from America. We dealt fully with the Company's improved prospects on August 7, when the price of the shares was 3⅛, and explained an important new development discovery on September 25.

TANALYK CORPORATION.

WHILE it is true this Company in the past year has progressed in production, the War discomforts notwithstanding, much has yet to be ascertained as to the nature of the various ore deposits opened upon. In a direction from north to south lode matter has been attacked from Graffsky to Mambet and Ulali, the deposits covering a distance of about 13 miles, the approximate relative positions being indicated in the plan given herewith.

It is to be noted disappointment has been experienced regarding the coal deposit about 10 miles south-east of Mambet, which it was hoped would be so useful to the Company. It is now stated, however, that the dangerous character of the ground in the region of such deposit necessitates its abandonment, and investigation is being conducted in another region, about 30 miles distant from the mines.

From the financial point of view the report is a disappointing one. As regards income and expenditure there is about an equilibrium, but the disappointment comes in when the balance sheet is referred to and it is found the Company has a floating debt of some £90,000. The Company's accounts are made up to January 13, 1915.

There are two outstanding favourable features: (1) the satisfactory emergence of the Ulali from what was a mere "prospect" to what is now developing into a mine with a good grade of copper and some gold contents; (2) the quite new discovery, termed the Tuba, about 25 miles to the north of the Tanalyk mine. From the development work done the Tuba deposit seems to be a very rich discovery. It is made up of baritic sands and gossan; the outcrop is a thousand feet in length, and the deposit is being attacked by shaft sinking, and driving at a depth of about 60 feet below surface. So far, apparently, of 270 feet driven, samples have been received in respect of 160 feet; for the 6-feet width of the drive the assays in respect of 160 feet of driving averaged 76 dwt. gold contents. Opposite one of the shafts the width of the deposit was found to be 40 feet, and at another point a cross-cut proved 12 feet of width. The original copper contents in the present oxidised zone have been leached out, leaving gold and silver and a little copper. The centrally situated Semeonoffsky outcrop gossan, it may be recalled, is utilised as a flux in smelting the pyritic ore of the copper mines. The Semeonoffsky outcrop is barren of copper contents, but, according to the ore reserves statement, 140,000 tons brought into sight averages 12 dwt. gold contents to the ton.

It had been hoped that for 1916 there might have been the attainment of an output of 1,000 tons of copper, but circumstances are such that it is considered prudent to reduce this estimate of 1916 output to 600 tons. With the war conditions there is delay in effecting desired extension of plant. The output for the past year is returned as 573 tons of blister copper, and the detail of developments, &c., above referred to is set out below:—

Mambet.

At 327-foot level of drive, 100 feet long, 80 feet averaged, for width 5.3 feet—copper, 2.3%; gold, 4.6 dwt.; silver, 4.8 oz.

The ore channel followed in depth for a distance of 100 feet.

Tanaly's

At 274-foot level ore body exposed for 240 feet length, width of 2.3 feet—copper, 4.3%; gold, 3.2 dwt.; silver, 3.2 oz.

Graffsky.

At 247-foot level, Troitsk section, ore exposed for 100 feet length, width 3.2 feet—copper, 2%; gold, 7 dwt.; silver, 3.7 oz.

Ulali.

At 140-foot level of drive, 525 feet length, assays taken in respect of 485 feet for width 4.6 feet—copper, 7.2%; gold, 2.8 dwt.; silver, .8 oz.

The main cross-cut disclosed 15 feet width of ore—copper, 7.5%; gold, 3.5 dwt.; silver, 1.2 oz.

At 210-foot level assay returns for 43 feet length for width averaging 7 feet—copper, 3.5%; gold, 1.2 dwt.; silver, 1.2 oz.

Semeonoffsky.

Gossan outcrop deposit used as auriferous flux for smelter. 140,000 tons in sight, averaging 12 dwt. gold per ton.

Tuba (25 miles north of Tanalyk).

Outcrop over 1,000 feet long.

At 60-foot level, 270 feet driven in baritic sands and gossan (oxidised form of pyritic vein). Samples received for 160 feet of such distance for 6 feet width of drive showed—copper, 1.1%; gold, 76 dwt.; silver, 23 oz.

Opposite one of the shafts 40 feet width of deposit proved, and at another point cross-cut proved 12 feet width.

In twelve months to October 1915—period of construction—the smelter produced 573 tons of

blister copper from 32,000 tons of sulphide ore and gold-bearing gossan flux. Each ton of copper contained 21 oz. gold and 186 oz. silver. Recently two small blast furnaces have been added to plant for treatment of Ulali ore, but shortage of coke has prevented continuous operation.

CANADIAN MINING INDUSTRY.

After proof had been afforded of the richness of the Cobalt silver deposits, surprise was expressed at the absence of investment of British capital in the field, and it is known that but a comparatively small amount of such capital has been embarked in the various gold-mining enterprises that have since been formed in different regions of Ontario. An explanation of the indifference of English investors to Canadian mining enterprises, even to those of distinct promise, is that in the initial stages of companies for dealing with Canadian properties, the English investor, where he had been induced to take an interest, found he had been "had." Companies formed for the purpose of manufacturing scrip and disposing of it to a credulous public were momentarily successful in the nefarious aims of obtaining good money for the output of the printing press, or, at best, the public was induced to secure an interest at extravagant prices in what were called mines, but which were only prospects. The same features in respect of Klondyke, Canadian, and American concerns were repeated as to Cobalt, and sought to be repeated in respect of some recent gold-bearing regions. Yet companies honestly conceived and soberly-working gold and silver properties are making rapid strides, and much is likely to be heard in the not far off future as to the increase of production of both gold and silver in Northern Ontario.

We dealt very fully with the position and outlook of the Hollinger Gold Mine in The Statist of February 27, 1915. This mine, which shows a gross profit of $184,768 for the four weeks period ending November 4 from 28,401 tons of $10.34 per ton, is still the largest producer in the Porcupine Gold Area of Northern Ontario, and will probably continue to hold its position for some considerable time, although many persons are of the opinion that the recent developments at the Dome Mine must eventually make the Dome the most important mine. On both properties new main working shafts, with an average daily capacity of 5,000 tons, are being put down, and elaborate plans to increase the milling capacity have been made.

The success of these properties, more particularly the Hollinger, which in 1910 was a mere prospect, has attracted considerable attention to the district, with the result that several properties have now been opened up with profit; the Porcupine Crown, the Schumacher, and Acme are already on a dividend-paying basis, while it is anticipated that the Porcupine Vipond and McIntyre Companies will each pay a first dividend in 1916.

With all these undertakings underground development work has been pushed forward, so that their ore supplies are far ahead of mill requirements. In many cases veins have been opened up in depth which do not apex at surface—this is particularly remarkable at the Dome, Hollinger and McIntyre Mines, where important ore bodies, ascertained by diamond drilling, have been found.

Development work is going on at the Dixon, North Thompson, Dome Lake, Dome Extension, and several other properties, details of which are not available.

Further considerable areas of promise have been taken up in this district on which practically no development has been or is being done. The Bewick Moreing interests control several such locations. Capital for these properties will no doubt gradually be found either in America or Canada, where the bulk of the money already invested in Porcupine has been raised.

With increasing returns from mines already producing, and the steady addition to the producing list of properties presently being developed, Porcupine promises to be a district of great importance.

The results so far attained, and the future prospects, should be particularly gratifying to the Ontario Government, that made the development of Porcupine possible by its far-sighted policy in extending a branch from its main line at Porquois Junction to Timmins, thus affording the necessary facilities for the introduction of labour and supplies to the different mining camps. Spurs from this branch line have already been extended to the Hollinger and Dome properties; the McIntyre and Schumacher mines are served by the branch line itself.

At Kirkland Lake progress has been slow, due principally to lack of capital, except at the Tough-Oakes, where satisfactory development has been steadily proceeded with. The latest reports from this property are to the effect that on the 400 feet level a vein has been opened up, which it is stated is five feet in width carrying an average value of £14 per ton. The new mill is almost completed, and the Canadian Company paid its first dividend of 12½ cents in November; a further similar dividend is to be paid on January 3 next.

New goldfields are being prospected near Kowkash, Boston Creek and Matheson. Remarkably rich ore was found on the Dobie Claim near the latter point, while most interesting developments are reported at Boston Creek. It is too soon yet to judge whether any of these districts will prove big producers.

Cobalt Silver Mining Companies have taken considerable interest in gold-mining properties lately. The Porcupine Crown Mines are practically owned by the Crown Reserve Silver Mining Company. The Nipissing Company has examined a number of properties and is interested in several. The Buffalo Company is presently developing the Teck-Hughes and other properties in the Kirkland Lake district, while the Dobie Claim already referred to has been taken over by interests connected with the Dominion Reduction Company of Cobalt.

Respecting some of the Kirkland Lake propositions, there is a lamentable state of indefiniteness as to what are the interests of London-formed companies initiated on supposition of their having secured a controlling interest in Canadian-formed companies, such as Tough-Oakes and Burnside, both having what are believed to be good properties. The English shareholders in these and associated companies ought to bestir themselves and have an inquiry to ascertain how they stand.

RHODESIA BROKEN HILL.

Those who have taken an interest in Rhodesian affairs will be aware that years ago an immense deposit of zinc-lead ore formation in two kopjes or hills was discovered. It has remained fallow for years pending investigation as to the proper process for profitably extracting the metal. Preparations were made last year, and have been brought to maturity, as to a first unit of plant for concentrating and smelting. The smelter was started in June 1915, and the remaining plant, designed to be capable of treating 50 tons of ore per day, was reported as completed in September 1915. To the end of November 354 tons of lead had been produced. It is to be hoped that the process the Company has taken up will prove satisfactory in view of the quantities of metals reported to be in sight. At No. 1 kopje 140,000 tons of ore are exposed of about 26% lead and 22% zinc contents. In No. 2 kopje, mainly composed of zinc with iron ores and limestone, 300,000 to 320,000 tons are reported as

exposed, containing 32% zinc. The Company's consulting engineer, Mr. Speak, of Messrs. Hooper, Speak and Company, left this country for South Africa on September 4, and is "now due" to arrive in London. It is hoped that at the annual meeting on Monday, December 20, Mr. Speak will be present and will report fully and give his impressions of what he has inspected. The present issued capital of the Rhodesia Broken Hill Development Company, Limited, is 641,083 5*s.* shares; say £160,270, the capital having been scaled down in 1910 by the giving of one new 5*s.* share for each former £1 share. On August 31, 1915, the end of the Company's financial year, the Company had a floating debt of about £18,000, and since that date further money must have been spent, an arrangement having been made for borrowing further resources.

SULPHIDE CORPORATION.

The Sulphide Corporation having, like the Broken Hill Proprietary, its own smelting works, has been able, by producing an easily marketable product, to reap great advantage from the high prices ruling for lead and zinc since the commencement of the War. The Company has its own Broken Hill mine, containing a large body of silver-lead-zinc ore. Its lead and zinc concentrating plants, from treatment of the mine ore and tailings residues, respectively produce lead and zinc concentrates in much the same way as do all the Broken Hill companies. But the Sulphide Corporation, in addition, is able at its own smelting works to smelt the lead concentrates as well as purchased ores, and produce lead bullion containing gold, silver, and lead in easily marketable form. The zinc concentrates the Company is not able to treat itself; but luckily it has been found possible, the directors' report just issued states, to find new markets for the sale of a substantial part of the zinc concentrates produced in the past year to June 30, 1915. Thus it comes to pass that the high prices of lead and zinc during the period have enabled the Company to earn a larger profit than ever before.

The quantity of mined ore milled during the past year was slightly less than in the preceding twelve months, but the lead and silver contents were appreciably higher, as shown below:—

Year to June 30	Tons Raised	Assay Value Lead %	Assay Value Silver Oz.	Assay Value Zinc %	Tons Treated	Products in Lead-Concentrates per Ton of Crudes— Lead %	Silver Oz.	Lead Recovery %
1910 ...	231,748	18·5	11·6	18·4	231,339	13·7	6·3	74·2
1911 ...	222,483	16·3	11·1	17·3	226,768	11·8	5·3	72·2
1912 ...	220,450	15·7	11·8	17·7	218,365	12·1(*a*)	6·1(*a*)	77·0(*a*)

(*a*) Including results from de-leading plant.

The increased lead values in the ore milled enabled the Company, despite the slightly smaller quantity of ore dealt with, to produce a larger tonnage of lead concentrates, and, party as a consequence, the cost of production declined considerably. In addition, the average price of lead for the year at £19⅞ per ton was higher than for very many years past, and the same applies to the average price of over £40 per ton for zinc. Largely as a result of these very high metal prices the value of the Company's produce in the past year rose to £1,312,940, against £1,060,178 for the previous twelve months:—

Year ended June 30	Lead Section Concentrates Produced Tons	Total Zinc Concentrates Produced Tons	Lead Bullion Produced Tons	Value of Produce £	Av. Metal Prices— Lead per Ton £	Silver per Oz. *d.*	Zinc per Ton £	Cost of Lead-Concentrates Per Ton £ *s.* *d.*

* Includes zincy-lead concentrates.
† Output of emergency plant to May 11, 1907, and from new plant thereafter.

Naturally, having regard to the very large increase in the value of the produce and the reduction in the cost of producing lead concentrates, the gross working profit was very appreciably benefited, rising to £435,161 for the past year, in comparison with £245,735 for the previous twelve months. After deduction of amortisation, the net working profit for the year comes out as £401,689, in comparison with £208,493 in the year to June 30, 1914. Allowing for general, office, and other charges, including £96,000 for taxes and reserve for excess profits duty, the net profit of the past year is shown in the accounts as £286,000, in comparison with £165,227 for the previous year, when, however, taxes only figured for £22,153. Dividends of 20% for the past year have been declared on both the Preference and Ordinary shares—the issued capital being £962,500, comprising 550,000 Preference £1 shares and 550,000 Ordinary 15*s.* shares—in comparison with 10% for the year 1913-14. In addition, the carry-forward is increased by nearly £60,000 to £287,463:—

Year to June 30	1915 £	1914 £	1913 £	1912 £	1911 £	1910 £

* Products in transit [illegible] "Investments".

The latest figure of surplus liquid assets is before allowance for payment of excess profits duty, but seeing that very good results were obtained by the Company in 1911-12 and 1912-13, the duty payable should not be a very onerous one. On the other hand, taxes in Australia have been rising rapidly recently.

As regards the position of the Company's mine, the quantity of ore in sight is very large, amounting to over 2,000,000 tons, representing about 10 years' supply for the recent rate of consumption. It has to be noted, however, that there has been a steady decline in the ore reserves tonnage since 1909. In his report for the year to June 30, 1909, the General Manager said:—

Future developments are not expected to balance the extraction for some considerable time, owing to the contraction of the lode at depth; nevertheless, from both the appearance of the walls and the general formation of the lode, there are strong indications that a further mass of ore may be discovered below the present workings.

The lowest level then was the 1,100-foot. The 1,200-foot and 1,300-foot levels have since opened up a considerable quantity of ore, but not nearly so much as the levels above. Another level at 1,400 feet is now to be commenced. In 1896 the ore reserves amounted to 2,690,620 tons, and in the 19 years since 3,683,777 tons have been extracted from the mine, and still the ore in sight is 2,039,200 tons.

Ore Reserves.

Year Ends June 30	Development Footage	Ore Developed Tons	Ore Mined Tons	Ore Reserves at June 30 Tons	Lowest Level ft.
1896	--	-	-	2,690,620	600
13 years, 1896–1909	—	2,496,186	2,382,886	2,803,920	1,100
1910	6,303	129,828	231,748	2,702,000	1,200
1911	4,566	182,883	228,483	2,656,400	1,200
1912 . .	3,828	63,600	220,450	2,499,600	1,200
1913	4,725	64,100	211,593	2,352,400	1,200
1914 . .	1,958	67,738	208,538	2,211,600	1,300
1915	4,074	27,679	260,079	2,039,200	1,300

As to the future, it has to be borne in mind that prices of the metals exert a very great influence on the Company's profits. During the War it is probable that high quotations will continue to rule, but what will happen thereafter is an unknown quantity. Still, at the present time the £1 Preference shares, at the market price of about 32*s.* *cum* 2*s.* dividend, return the investor about 13¼% on the basis of the past year's dividend of 20%, and the 15*s.* Ordinary shares at, say, 21*s.* 6*d.* xd give a yield of about 14%. The Preference are the better purchase, consequent on their preferential 10% dividend, after payment of which the Ordinary receive 10% and then both classes share alike. The manner in which the shares have fluctuated in the past few years should be noted from the following:—

Highest and Lowest Prices.

		1915*	1914	1913	1912	1911	1910	1909	Present Price

* To mid-November.

RAND GOLD OUTPUT.

Although at first sight it looks as if the gold output for November showed a decrease compared with October, when the difference in days is taken into account, it will be found that for October the output was £104,587 per day; whereas for November, with 30 days, it amounted to slightly more than in October—namely £106,073 per day. In other words, when allowance is made for the reduced number of days in November, the gold output was at a greater rate than for a very long time past.

The returns of natives recently employed in gold mining are as follows:—

1915							
Nov.	Oct.	Sept.	Aug.	July	June	May	April
210,068	210,017	204,833	196,866	190,026	184,155	183,961	186,941

American Copper Companies.—Last week, dealing with the positions of the Utah, Ray, and Chino Companies, we mentioned that the Utah, for the December quarter, had increased its dividend from $1, paid for the two previous quarters, to a distribution of $1½. On the day our remarks appeared, the Ray and Chino Companies also announced increased dividends; in the case of the Ray from 37½ cents to 50 cents, and Chino from 75 cents, paid in each of the two previous quarters, to $1 for the December quarter. Assuming ability to maintain the increased rates of dividends now declared, the yields on the quotations given last week will be Utah 7½%, Ray about 7¾%, and a little over 7¼% in the case of Chino.

Burma Corporation.—The internal shaft has now reached the desired depth—*i.e.*, the random of the Tiger Tunnel at 500 feet below the 171-foot level. From 491 feet to 496 feet the values average 14 oz. silver, 17% lead, and 26% zinc. Extraordinarily high metal contents continue to be reported at nearly all points, especially at the 300-foot and 430-foot levels. For instance, at the 430-foot level, in rise 1,292 feet south, from 35 feet to 40 feet, averages 40 oz. silver, 50% lead, and 40% zinc. This is surely the superlative of richness for a base-metal bearing ore.

El Oro.—The directors' report issued this week covers the two years ended June 30, 1914 and 1915. For the year 1913-14 the profit and loss account shows a profit of £103,690 after writing off £25,000 for depreciation and £23,242 loss on exchange. The year to June 30, 1915, was a very bad one indeed, owing to the revolutionary conditions. The Company was compelled by the party in power to restart its mill on October 1, 1914—it had been shut down since April 28, 1914—and to continue operations till February 27, 1915, when work once more ceased on account of invasion of the camp by revolutionaries. No work has been done since except maintenance of workings and the keeping of them free from water and the property generally undamaged. In the circumstances a loss of £78,397, after writing off £46,343 for depreciation and £20,444 for loss on exchange, is not surprising. It is satisfactory to note the strength of the balance sheet at June 30, 1915, cash, Treasury bills and bullion exceeding current liabilities by £98,554. The report states that economic conditions in Mexico as yet show no improvement, and present advices do not justify optimism in this direction for the immediate future. It is to be noted, however, that no damage has been done to the mine or works; but the railway has suffered some damage, as some of the locomotives and other rolling-stock which were commandeered are in a bad state of repair.

Witwatersrand (Knight's).—£469,625, in £1 shares. Sundry revenue, say £2,000 a month, included in profits below. Mill 225 stamps; five tubes added October 1913; total capacity about 45,000 tons per month.

CHRISTMAS HOLIDAY ARRANGEMENT.

"THE STATIST" will be published on Friday next, December 24, instead of on Saturday.

The Statist.
LONDON, SATURDAY, DECEMBER 18, 1915.

FINANCING THE WAR.

ANOTHER ATTRACTIVE ISSUE.

SINCE the 4½% War Loan was paid up in full at the end of October the War has been financed by sales of Treasury bills and by the creation of Ways and Means advances. The demand for Treasury bills has been very large, and on Saturday last the amount outstanding was as much as £358,394,000. From the extent of the demand for Treasury bills it became evident that many people were anxious to invest money for short periods, and would be prepared to subscribe for short-dated obligations. To meet this demand the Lords of the Treasury have authorised the Bank of England to receive until further notice applications for Exchequer bonds bearing interest from the date of purchase at 5% per annum, payable half-yearly on June 1 and December 1, and repayable on December 1, 1920. Beyond the attractiveness of a bond repayable in five years, and which cannot, therefore, depreciate in value, the holders, in the event of future loans (other than issues made abroad or issues of Exchequer bonds, Treasury bills, or similar short-dated securities raised for the purpose of carrying on the war), will have the right to convert the bonds at their face value. Furthermore, the bonds will be exempt from all British taxation, present or future, if it is shown in the manner directed by the Treasury that they are in the beneficial ownership of a person who is neither domiciled, nor ordinarily resident, in the United Kingdom. Where a bond belongs to such a holder the coupons will be paid without deduction for income tax, or other taxes, if accompanied by a declaration of ownership in such form as may be required by the Treasury. The bonds are to be in amounts to £100, £200, £500, £1,000, and £5,000, and it will be possible to register the holdings in order that warrants may be transmitted by post. Intending subscribers can obtain prospectuses from any post-office, bank, or stock exchange throughout the country.

It is quite unnecessary to dilate upon the attractiveness of these bonds. It will be sufficient for us to point out to our readers that the country needs all the money that can be subscribed, and that it is of the highest importance for every citizen to endeavour to make the new issue a very great success, not only by subscribing immediately as large a sum as possible, but by endeavouring to make repeated subscriptions from month to month as profits or savings are accumulated, or other capital becomes liquid, as well as by encouraging neighbours and friends to act in a similar manner. Moreover, no one will have any difficulty in securing bankers' loans for the purpose of subscription. Yet another and a new method of making subscription for the bonds has been opened up by the plan placed before Parliament this week by the Chancellor of the Exchequer to request holders of American securities throughout the country to sell their securities to him and to invest the proceeds in these 5% Exchequer bonds. The amount of American securities held by British investors is large, and the request of the Chancellor of the Exchequer will undoubtedly cause a very large amount of American securities to be exchanged for Exchequer bonds.

Moreover, the proposal of the Chancellor of the Exchequer with regard to American securities is intended not merely to provide money for the War by assisting persons who hold American bonds to sell them in order to subscribe for Exchequer bonds, but also to provide the exchange needed to meet our great payments to the United States. And to effect this purpose the Chancellor is prepared to borrow American securities [illegible] to issue a marketable certificate entitling the owners not only to the interest which their securities give, but to one-half per cent. interest over and above such return. The deposited securities would be used as collateral for temporary loans raised in the United States.

It is obvious that of the two methods the sale of the securities and the investment of the proceeds in the new issue of Exchequer bonds is much to be preferred, as this will prevent the creation of floating debt in the United States, and any problems that might arise from such creation.

As the measure for mobilising British investments in American securities is a very important one, and specially appeals to the readers of THE STATIST who possess large amounts of bonds and stocks, we reproduce the essential portions of the speech of the Chancellor of the Exchequer, in which he explained the measure to the House of Commons:—

"The scheme divides itself into two parts. We primarily propose under the scheme to purchase all the securities held in this country which are suitable for the Government. I may say at once the kind of securities which we have in view are American and Canadian securities. In our opinion the simplest and best course to pursue is to purchase. Accordingly, where the holder of Canadian and American securities is in a position to sell his securities outright, the Treasury desire to purchase such of them as are in their opinion suitable for the purpose in view at the current market price, the purchase money to be paid in five-year 5% Exchequer bonds at par.

"In the case of securities reported on the New York Stock Exchange, the middle price of the closing New York Stock Exchange quotation of the day on which the securities are purchased will normally be taken at the current market price for the purpose. In the case of unquoted securities, or in the case of quoted securities in respect of which the current quotation may not be regarded as representing the true market value, the price will be fixed by agreement with the person tendering the securities. The Exchequer bonds will carry interest from the day following that on which the purchase is made. Where a quotation does not include accrued interest or dividend to date, such accrued interest or dividend will be added to the price. The price being payable in sterling, the New York dollar price will be reckoned in sterling at the exchange of to-day. That is the purchase scheme.

"We offer to any holder to buy such American and Canadian dollar securities as are suitable for our purpose at the market price of the day, without commission, without brokerage, for middle market price of the day, and to pay in 5% five-year Exchequer bonds. Hon. members will realise what that means when I say we are giving British credit—the market price of the day of American securities—we are giving British credit of 5%. Anyone will appreciate at the present moment American securities are at a good price. British securities, on the other hand, owing to the War, not owing to any failure of credit, but owing to our having to make such large payments—British securities are comparatively very low, consequently, when we offer 5% Exchequer bonds in exchange for American and Canadian dollar securities at the prices of the day, we are making an offer which would only be justified by the absolute necessity for us to mobilise our American securities and to make them of the utmost value to the nation as a whole.

"We recognise that there are some holders of the securities I have named who, however anxious they might be to assist the Government by selling, are not in a position to sell their securities outright. In order to meet their position, an alternative scheme is suggested. Where a person is unable or unwilling to sell, the Treasury are willing to accept securities on deposit, subject to the right of purchase by the Treasury in certain contingencies on the following terms:—

"1. These securities are to be transferred to the Treasury for a period of two years from the date of transfer.

"2. While securities are on deposit under this arrangement, the lender is to receive from the Treasury all interests and dividends paid in respect of them, and also, by way of consideration for the loan, payment at the rate of half of 1% per annum, calculated on the face of the securities.

"3. The Treasury is to undertake, at the request of the depositor at any time during the currency of the loan, to sell the securities on his behalf in New York and pay over to him the proceeds in sterling at the exchange of the day without deduction for brokerage or commission; or, if the depositor prefers it, to allow him to make his own arrangements for sale on condition that the proceeds are remitted to the United Kingdom through the Treasury agents in New York.

"4. The Treasury, if they find it necessary to sell all or any of the securities deposited, is to have the right at any time, when such necessity may arise during the currency of the loan by sending a notification to the depositor of their intention to do so, to purchase the securities from the depositor for the purpose of such sale. In the event of this right being exercised, the Treasury is to pay to the depositor the value of the security in question calculated at the middle price of the New York Stock Exchange closing quotation of the day, on which the notification is sent, with the addition of 2½% on the value so calculated, payment to be made in London in sterling at the exchange of the day without any deduction for brokerage and commission against the surrender of the Treasury certificate of deposit. That fourth condition is a condition about which I shall have something to say in a moment. Fifthly, at the end of two years from the date of the deposit the remaining securities are to be returned to the depositor in exchange for the Treasury certificate. It is intended to make arrangements for dealing on the Stock Exchange in Treasury certificates of deposit, and to set up a Treasury register for transferring the deposited securities from one holder to another. Lastly, this arrangement will not involve any additional liability for Stamp Duties."

"Shortly summarised, the conditions are that the holder of any securities which the Government may consider useful for the purpose in view may lend those securities upon the condition that he receives all the interest or dividend ordinarily payable upon the securities, together with ½%. He may at any time sell his securities and receive the full market value of the day. So far, of course, the arrangement would be one which would be altogether favourable to the holder of the securities. He would have complete control of the security, and he would have the complete benefit of the security. He would have perfect freedom to sell, and would receive the whole of the dividends and interest, and, in addition, the ½%. Therefore, so far, the bargain would be one, I will not say exclusively, but very much, to the benefit of the holder of the securities. There is, however, this further condition that we are bound to import, although it is a condition which, in my judgment, as long as it is there, would never in fact have to be taken advantage of. It is a condition which, in the last resort, gives the Treasury the power to sell. I think hon. Members will very quickly realise why a condition of that kind is indispensable.

"Unless a condition of the kind exists, the British Government might find itself very awkwardly placed. These securities will, or may be, used, if not by the Government itself—it may not be the Government at all—by institutions over here as collateral security in borrowing money in the United States. If the lender knew that the borrower in no circumstances would consent to the realisation of the security, the borrower might find himself in great difficulties in dealing with the lender; at any rate, the borrower could not deal with the lender upon a footing of equality. It is really essential to put the two parties to the bargain on the same footing, so that the borrower should be in the position, if needs must, to sell the securities. I do not think the borrower will ever want to sell, and he would not be authorised under this condition to sell merely because he desired to sell. He could only sell if necessity arose. I do not think either that the lender ever would really want the borrower to sell. On the contrary, it would be most undesirable in many respects to put upon the American market a very large number of these securities in too short a time. Therefore, both parties, in the last resort, are of the same mind, that they do not want the sale to take place. Nevertheless, it is necessary for the borrower to be in a position to defend himself, and he can only defend himself if he is in a position to sell. Consequently, we have to have a condition of this kind. Then it is argued that if you have a condition of this kind you ought to have the condition upon terms more favourable to the British holder of the security. But if the terms are more favourable to the British holder of the security, the borrower in the United States is not really independent. These terms bind him, and the lender in the United States knows that the borrower is bound by these terms. The borrower in the United States must have freedom. That is in the public interest.

"I now come to the last point—namely, how far is the lender in this country injured? If we notify the lender of the security that we are going to sell, the lender can himself buy the security back. If the British Government—I will not say the British Government, but the borrower over here is going to sell this security in New York, or wherever it may be, nothing stands in the way of the original owner of the security himself buying it back, and if it is at a depreciated price he buys it back very much cheaper. We allow 2½% margin, and we think that that margin would be more than sufficient to cover any difficulties which might arise with regard to the exchange. If there be critics of the scheme, if there be those who do not think the second part of the scheme good for themselves—personally, I do not agree with them—I should unhesitatingly work under that second part of the scheme myself; but if there be those who feel that, I would remind them that primarily we put forward purchase as our main object, and the whole is voluntary."

THE SITUATION IN THE BALKANS.

The Balkan policy of the Entente Powers is gradually developing. It is reported from Rome, for example, that an Italian expedition has actually landed in Albania intended to protect Serbia; that it proceeded safely to its destination; and that everything worked like clockwork. It will be recollected that M. Vivianni, while still French Premier, intimated that he had good reasons for expecting that Italy would co-operate in the defence of Serbia. Therefore the present announcement comes as a surprise to none of us. It is not for that reason, however, the less welcome, for it is an intimation that before very long the Central European Empires will have cause to regret the rashness of their strategy. Furthermore, it is reported that, with the approval of the two Central European Empires, an agreement has been entered into between Bulgaria and Greece, in accordance with which the Bulgarians pledge themselves not to invade Greek territory. The agreement, of course, does not bind either Germany or Austria-Hungary. Therefore we must wait and see how they will act in regard to it. Much, no doubt, will depend upon the strength which the Entente Allies will in the immediate future be able to show, and especially upon the more or less rapid action of Russia. Reinforcements, we are told, are steadily reaching the British and the French, who clearly for the moment have taken up a position which they are strong enough to hold. Respecting Russia, it is always to be borne in mind that, though she has an immense superiority of men over her antagonists, she yet has been, up to the present, hopelessly outmatched by the immense supplies of munitions possessed by her opponents. On the other hand, we must never forget that Russia is working with might and main to make up for past delays; that she has entered into important engagements with Japan for the supply from the latter of munitions needed by her; and that she is likewise being furnished with such both by our own country and by the United States. Therefore we have every reason to expect that Russia, if not already, will at a very early date be in a position to take decisive action. Whether she will approach by land or by sea is not yet known, or whether she may adopt both courses. But whenever she does move it is reasonably certain that the Balkan Question will be settled without serious delay in a satisfactory manner for the Entente Powers.

HOW WE STAND.

The discussion on peace in the Reichstag last week had not very much apparent significance, for the Government affected full confidence, and there was no movement throughout the country to indicate regret because something had not been agreed upon to hasten peace. Still, the fact that Germany hurried on the War, leaving neither her Ally, Austria-Hungary, nor her opponent Russia an opportunity to exchange views lest the determination upon war might be defeated, must not be forgotten when we see that, in spite of the whole influence of the Government, there is a party in Germany strong enough to compel a discussion upon peace at such a time. A little while ago a discussion upon peace would have been impossible. The Government would not have listened to it. The people would have supported the Government in its determination to stop a discussion which might encourage the enemy, and the whole matter would have been closed without a serious debate. Now we find that though the Government expresses itself so hopefully it is incapable of preventing discussion. It is worth while, then, to consider how the several parties to this great struggle stand when we are approaching the end of the first seventeen months of it. The great value in war of preparation is being distinctly proved by the strong position that the two Central European Empires hold even after nearly seventeen months of the conflict. Practically Poland is in their hands—both Russian and Austrian Poland, as well as Prussian. Practically, also, the whole of Belgium is under their heels. And a considerable portion of France is, likewise, held. In addition to this, the two Central European Empires have been able to persuade a man like the King of Bulgaria, who certainly would not risk his own objects for love of any man in the world, that they will win, and that his best chance, therefore, of obtaining Macedonia is to fight for them. Furthermore, they have not merely attached Turkey to them, but they are apparently rallying a considerable Mohammedan feeling in their support. It would be childish to affect to despise this long catalogue of successes, or to deny that the two Central European Empires did not merely brag when they preached that they could dominate the world. Nevertheless, it would be faint-hearted in the extreme, as well as blind and fatuous, to conclude that the Central European Empires have not been defeated, and that their ultimate decisive defeat is not as certain now as anything which has not been finished can be considered in this world.

The first point to appreciate is that preparation is of immense assistance to those who make it carefully and thoroughly before they venture upon a great risk; but that preparation is only one of the ingredients of success in war. Preparation has very strict limits, and one of those limits is marked out by the numbers which a prepared belligerent can bring to bear upon unprepared opponents. Now if there is anything certain in this world it is that the populations of Germany, Austria-Hungary, Turkey, and Bulgaria are hopelessly inferior to the populations of the enemies arrayed against them; that the preparations made by the two Central European Empires have now nearly exhausted themselves; while the preparations made by the British Empire and Russia are only now coming to the form when they can be used with full effect. Germany, if she had been able to throw another half-million, or possibly even a quarter of a million, of men into the field, would probably have succeeded in capturing Paris. As it was, she found France unprepared; and she found England with practically nothing to resist her, only the small Expeditionary Force. Had she been able to throw upon the Expeditionary Force double the number of men that she actually did throw, she would probably have cut it to pieces. And if the British Army had been broken up completely, the reasonable conjecture is that Paris would have fallen, or, at all events, that the German Army would have reached Paris, whatever the French Government and General Joffre had decided with regard to the employment of the French Army. Germany, then, though she had prepared upon a great scale, though she had blinded the Magyars, and convinced them that it was their interest to join her, and though for months together Italy did not declare war upon her, yet failed. Great as her preparations were, they were not great enough. France, luckily for herself, found in 1914 what, unfortunately, she failed to find in 1870—a capable general; and the incapable commanders of Corps and Divisions were quickly got rid of; competent men were put in their places, and the whole fighting male population of France was called out, and answered to a man. France since has been slowly but steadily forcing back her enemy.

It is true that just now there are signs that Germany recognises that her adventure in the Balkans is a reckless one, and may lead to disaster. Therefore she appears to be preparing for another great offensive movement either in France or in Belgium. But France is fully prepared. She has a larger force than Germany, while we, who had only a few divisions at the beginning of the conflict, have now in France alone over a million of men. If, then, Germany

decides upon a great offensive movement in the middle of the winter, either in France or in Belgium, the Entente Allies can wish for nothing better. It will wear away what troops she still has. It will weaken her power to assist the Bulgarians. And, if Russia finds enough of munitions to begin operations in Poland, the position of the Germans in that country will be critical indeed. The Entente Allies are now happily in the closest communication with one another, and we may be very sure, therefore, that they are exceedingly well informed as to the movements and the numbers of the enemy both in France and in Belgium. We may conclude, therefore, that they are prepared for an offensive movement should it take place. There is an impression that the Entente Powers are purposely delaying the offensive movement upon which they have decided until the spring, and that then it will be undertaken upon such a scale as in all reasonable probability to bring the great conflict to an early and a satisfactory conclusion. All these impressions are, of course, intangible things. Who sets them going is not known, and how far they represent the real intentions of those to whom they are attributed, it would be difficult indeed to say. Therefore we do not put them forward as more than mere rumours. At the same time, everybody must see that spring would be a more favourable time for a great offensive movement than the present so far as the Entente Allies are concerned. It is quite easy to understand that the two Central European Empires having to guard a front altogether extending over 1,200 miles, may be extremely anxious lest their manhood should fade away too rapidly during the winter, and that in the spring they should no longer be in a position to act with vigour. But if it be true that the Entente Allies dispose of the immense numbers now attributed to them, and if it be further true that the outturn of munitions is upon such a scale that Russia in a very short time will be able to put in the field overwhelming numbers, then it clearly would be an advantage to the Entente Allies if they could put off the offensive for a few months more and only begin when the roads are favourable for moving great armies.

Apparently, then, it is the interest of the Entente Powers not to assume the offensive, while it is clearly the interest of the two Central European Empires if the thing is practicable. Whether it is practicable will depend, of course, upon a great many circumstances. In the first place, the Entente Allies are, or at all events ought to be, well acquainted with the ability of Turkey and Bulgaria to play a formidable part in the Balkans or in Mesopotamia. If the Entente Allies can checkmate both, or can decisively defeat both, then it ought to be easy either to postpone or to undertake at once the offensive elsewhere. Still more, it is plain that if Italy is prepared to assist the Entente Allies effectively in the Balkans the whole aspect of things there will be changed. Lastly, it is clear that if Russia has now sufficient munitions to fit out an expedition capable of dealing effectively with the Bulgarians, one of the serious difficulties of the position of the Entente Allies will be removed, and they will have ample opportunity for considering the course they ought to pursue in all its aspects, and either waiting or hurrying on an offensive movement. The public is so ill-informed respecting all the aspects of the case that it is not in a position to decide what ought to be done; and therefore we may satisfy ourselves with saying that, although Germany has not lost any very considerable hold upon the portions of the disputed territories which she seized during the course of the War up to the present, her power of maintaining her position is growing less and less every day; that her fighting manhood is being utterly wasted; and that, so far as Austria-Hungary is concerned, more than half the Empire is hostile to its policy, and would welcome an invasion by the Entente Allies if it were undertaken in sufficient force. In their turn the Allies are growing in strength every day. Last week's enlistments exhibit this to us unmistakably. Even at the end of nearly seventeen months the eagerness to enlist was almost indescribable, and we have now a force greater than anybody thought likely would have to be raised by England, while we have practically not touched our great dependency, India. The power of the Entente Allies, then, will not really be exerted until the spring, and in the spring the reader who studies the matter for himself can easily determine whether Germany will be in a position to act as she would have acted in August and September of last year.

SIR G. REID ON IMPERIAL UNION.

At a dinner given to him at Claridge's Hotel on Tuesday evening Sir George Reid referred to a question which must occupy a prominent place in the minds of all British statesmen, and which we congratulate Sir George upon having taken so favourable an opportunity to bring at this notable time prominently to the notice of the whole public of the Empire. Sir George has filled the office of High Commissioner for Australia with great efficiency. His term is nearly expiring, and, as he expressed it himself, he will very soon be in a position of freedom, in which he can fully, frankly, and legitimately discuss all great questions of British policy. Reminding his hearers of the loyalty, as well as the gallantry, with which the portions of the Empire which have not yet acquired full self-government have acted during the great War, Sir George expressed the opinion that every statesman must recognise that there were many cognate questions which must be discussed and settled before long; and he left very little doubt in the minds of any of his hearers respecting his own opinion of what the solution ought to be. We ourselves have long advocated the extension of self-government at the earliest possible occasion to every portion of the Empire. We have even sometimes incurred the danger of giving offence to the self-governing Dominions, Commonwealths, and Unions by the attitude which we took up. We need hardly say to readers of The Statist that nothing was farther from our mind than in any way to give offence to the self-governing portions of the Empire. Our object was to reason with them; to persuade them if we could; to put before them plainly, at all events, what seemed to us the strong arguments in favour of change. But offence was the last thing we had intended to give. We welcome, therefore, as the first beneficent sign of a really important change the statement of Sir George Reid on Tuesday evening. He has occupied a great position in Australia. He has discharged his Australian functions in London with exemplary success and ability. He will, therefore, be able to speak with an authority that no mere Britisher can pretend to. Therefore we hail his announcement, and we cannot doubt that he will carry with him the majority of his people. The time is most favourable. In the first place, this War, whatever else it has taught, has convinced every man who is capable of conviction that the only way for founding and maintaining a great Empire is by extending to the whole people the blessings of self-government. We have seen Ireland, which for so many centuries has been a danger in time of war, as eager as England herself to put down the aggressor on this occasion. We have seen India, which has been connected with us only about a century and a half, offering her sons and her wealth with lavish patriotism to maintain the honour and the dignity of the Empire. And, most convincing sign of all, we have seen those gallant Dutchmen who fought so valiantly against us during the wars which ended 13 years ago fighting by our side with equal gallantry. No man who is not a slave to his prejudices can shut his mind to the teaching of these great examples. Everybody must see that generous treatment begets generous feeling, and ultimately, loyalty. In the case of Australia, the

desire for a more friendly attitude towards the people of India is perhaps more desirable than anywhere else. The great Island Continent is, it may be said without much exaggeration, capable of maintaining a population not far short of that of the whole British Empire at present. Yet to-day its inhabitants are only about equal to those of Greater London. At the present rate of growth it will take, no man can say how long, for Australia to be really self-dependent. And yet by a wiser and more generous policy she might imitate the United States, and in little more than a century perhaps have a population of one hundred millions of souls. We do not care, however, to dwell upon either the figures or the needs. If Sir George Reid, as his speech on Tuesday evening seems to promise, has really made up his mind to take up this question in real earnest, we are satisfied that we can leave it to him, in full confidence that he will be able easily to bring over to his own view the great majority of his people.

JAPANESE FINANCE.

Mr. Taketomi, Finance Minister of Japan, presented his Budget statement for the year 1916-17 to the House of Representatives on the 7th instant. The total revenue is estimated at about £55,350,000, of which the amount of the ordinary is £52,302,000 and that of the extraordinary £3,047,000. The expenditure balances the revenue at the same total figure, of which the amount of the ordinary expenditure is £39,745,000 and that of the extraordinary £15,605,000. So far, therefore, as the ordinary revenue and expenditure are concerned the excess of revenue will amount to £12,557,000. As compared with the Budget in force for the year 1915-16 there is a decrease of £3,407,000 in both the revenue and expenditure. In the revenue there is a decrease of £490,000 in Customs duties, due to the effects of the present War, while, on the other hand, the receipts from public undertakings and State property are increased by £497,000. An alteration of the naval programme is intended, so that, in addition to the amount previously sanctioned, a further sum of £4,532,000 will be devoted, spread over four financial years. The instalment of this sum applied to the year 1916-17 is £588,000. The revenue has not yet returned to a normal figure and it is impossible to foresee the future of the present War. The Japanese Government, therefore, considering the situation, has taken precautions in order to curtail the expenditure. The economic conditions this year, though still feeling the influence of the War, are gradually on the way to amelioration. In some industries, especially those concerned in shipbuilding, navigation, the manufacture of munitions, and other goods hitherto imported, there have been revealed signs of prosperity. The cheerful tone, too, in the American market has produced a recovery in the silk exports. As regards foreign trade, the exports during the eleven months of the current year amounted to £63,600,000, and the imports to £48,800,000, the excess in the exports therefore amounting to £14,800,000. As compared with the corresponding period of the preceding year, the gross total of the imports and exports shows an increase of £3,200,000, the imports decreasing by £6,500,000, while the exports increased by £9,700,000. As a result of the favourable trade balance, Japan is in the position to command a considerable quantity of gold. While it is the intention of the Government to strengthen the gold reserve, at the same time it is felt advisable to avail itself of the opportunity for reducing the external debt so far as circumstances may allow.

The Royal Mail Steam Packet Company are sending out a useful case for holding Treasury notes neatly bound in leather. The device for securing the notes in their place is both simple and ingenious.

THE SUPPLY OF SUGAR.

Singularly little attention in 1915 has been devoted to the sugar question. It has been regarded as in the hands of the Government, and, therefore, beyond discussion. The rise in the price has been treated as inevitable under such circumstances, and interest has been largely directed to doing without the staple, except for human consumption. This, however, is not a treatment of the matter which can serve the nation or even the market. We must face the effect of Government intervention first. With that Government a coalition the result when opinions differ must be a policy of *quieta non movere*, which with regard to sugar-growing is rather, unfortunately, a policy in itself. Mr. Asquith and Mr. Lloyd George, when the Liberals were in sole power, laid down a perfectly intelligible line of action. It gave us cheap beet-sugar at the price of making us practically tributary to Germany and Austria-Hungary. Mr. Balfour and Mr. Bonar Law, when the Unionists were in Opposition, specifically adopted the Chamber of Agriculture policy as laid before Parliament by Mr. Courthope, M.P., the then Chairman of the Chamber. This policy would have given to sugar-beet growing in England that margin of advantage required by those who, on being assured it, were prepared to put up the requisite factories. For sugar-beet growing is a form of agricultural industry which requires a big industrial industry to precede it. The factories which convert the beets into sugar, feeding-mash, fibre, &c., are costly; £100,000 is about the sum. Now it is clear that when the four statesmen named are all in the same Cabinet those govern whose policy is in possession. No effort has been made to get sugar-beet growing encouraged in this country, and so long as the Coalition holds together it is fairly obvious that no effort can be set on foot. The Government may fall over other matters, but there will be no critical division over sugar-beet.

Because this fact is unpalatable in agricultural circles it has been in effect tabooed therein. Motions over sugar-beet have not been tabled at county or other gatherings. We have to acquiesce, it has been said, in war conditions during war time. Commerce however, is compelled to see where the sugar supply as a whole is to come from. The farmer, if prevented from growing it, has no further concern than to see how best he can replace the cheap foods with a sugar basis which, for want of that basis, have disappeared.

Now, commercially there is, in the first place, the actual effect of the price advanced on the consumption of sugar. Whatever the reduction in the sale of the by-products may have been, whatever the falling-off in the use of liquid sugar as a mere saturant, the ordinary consumption of sugar itself has not been reduced. It is likely to work out at about 35 million cwt., an almost entirely normal figure, for the year. The stocks are likely to be about 2½ million cwt. smaller this Christmas than last, but this is only because the use of the sugar has not been checked even by occasional periods of short arrivals. One way and another about 8 million cwt. extra supply of cane-sugar has been secured, and this has gone by far the greatest part of the way in balancing the loss of the beet-sugar usually derived from the Continent. The rise in sugar prices may be sufficiently indicated in a brief table in which *A* column gives the price of ordinary cheapest feeding sugar; *B* that of fine table sugar; and *C* the ratio of *B* to *C*. All prices per cwt.

	A	B	C
	s. d.	s. d.	
November 1915	18 6	40 6	1 : 2·18
„ 1914	18 0	31 0	1 : 1·72
„ 1913	11 0	18 0	1 : 1·65
Ten Years Ago 1905	11 6	19 0	1 : 1·65

It will be seen that the rise in luxury sugar is much steeper than that in feeding and utility sugar. This has happened despite an increased supply of the cane-sugar, which, speaking broadly, may be called the luxury type.

This maintenance of the total consumption throughout fifteen months of the most expensive of wars is a very remarkable circumstance, with which economists will later on have to concern themselves, but in the meanwhile it gives us a somewhat unexpected element of stability, and enables us to look to the sources of supply with some confidence in their being duly drawn upon. In the first place it will be useful to note the production of alien enemy countries, and as such withdrawn from our sources of supply. They are set forth in the following table, the average of the last five years' production in cwt. being given:—

Beet.—Germany	45,600,000	cwt. Raw Sugar
,, Austria-Hungary	29,260,000	,, ,, ,,
,, Bulgaria	5,100,000	,, ,, ,,
Total	79,960,000	

The 80 million cwt. lost to us as a fund or stock on which to draw consists exclusively of low quality sugar. The second group is of friendly or neutral but war-hindered countries, regions whence sugar reaches us hardly, if at all. This group is composed as follows:—

Beet.—Belgium	5,200,000	cwt. Raw Sugar
,, Roumania	75,000	,, ,, ,,
,, Russia	30,000,000	,, ,, ,,
Cane.—Mexico	2,000,000	,, ,, ,,
Total	37,350,000	

Mexican supply is cut off by civil war, Russia and Roumania by geographical position and war blockade, unhappy Belgium by direct ravages of war. Serbia, we fear, must be held this year to have lost her beet-crop, which gave as a rule 200,000 cwt. of raw sugar. The French production must be held to have been reduced by war; the extent cannot yet be estimated.

France produces in an ordinary year about 15,000,000 cwt. of raw sugar from beet. After a good yield like that of 1912-13 she is an exporter, but for the next twelve months we shall not expect her to be more than self-supporting.

We now come to the Allied and neutral countries on which we can draw, and there it will be useful to consider not only their mean but their maximum and minimum production. It will be sufficient on this very broad view to indicate totals in millions of cwt. The 10 years are 1904-14 inclusive:—

		Maximum	Average	Minimum
Raw Beet Sugar.—Spain		3·4	2·0	1·2
,, ,, ,, Italy		6·0	3·0	1·6
,, ,, ,, Holland		4·8	4·0	2·5
,, ,, ,, U.S.A.		15·0	10·0	5·0
,, Cane ,, ,, ...		22·0	20·8	17·0
,, ,, ,, Cuba		52·0	34·0	27·0
,, ,, ,, India		52·5	44·0	35·0
,, ,, ,, Philippines ...		4·5	2·9	2·3
,, ,, ,, Egypt		1·5	1·0	·5
,, ,, ,, Mauritius ...		5·0	4·0	2·8
,, ,, ,, Java		29·3	24·0	19·0
,, ,, ,, Australia ...		4·6	3·7	2·6

While these remarkable crop fluctuations between the different seasons make it impossible to grow beet-sugar in England without some provision against dumping, they show possibilities of surplus production, of which it is to be hoped the Government in the present crisis is taking advantage wherever there is an opening for early purchase. The British Guiana cane fields are spoken of as well worthy of special development; and if with improved agriculture Indian average production could be raised to the maximum attained of a recent year the situation would obviously be much improved on those best of all lines, production within the Empire. On December 10 there was great official rejoicing in India over the opening up to agriculture of 2,250,000 acres of land which for want of water had been desert for ages. The irrigation works represent years of labour. It has been assumed that this important accession of agricultural area would be devoted to wheat, but with the large Canadian and Australian wheat surpluses at our disposal the application of the bulk of the additional area to growth of sugar has serious claims. Sugar is much more above a peace price than is wheat.

Financial Notes.

MR. VANDERLIP, President of the National City Bank of New York, describing the business condition of the United States as "running at a speed and with a power never exceeded," attributed to the War much of the activity, but warned his hearers that when the War ends the problem of the United States will be to get themselves independent of the War business as quickly as possible. With the country's widely diversified resources, and its products and industries so well balanced that they are more nearly mutually supporting than those of any other country of the world, Mr. Vanderlip looks to Europe for capital to finance every great movement in her development. If, he argued, conditions can be created that will give confidence to capital, so that the owners of it will be disposed to invest it freely, both in internal development and in granting external credits, the country will become quite independent of war orders.

A good deal of this is no doubt true. The United States already has a population of over 100 millions of souls. The population, or at all events a large proportion of it, is exceptionally devoted to peace, to trade, and to business. Great as the population is, it is still small compared with the extent of the country, and, consequently, there is much room remaining for further settlement. The United States, therefore, will continue to grow rapidly for a considerable time to come. But Mr. Vanderlip, we venture to think, is over-sanguine in looking for large investments of capital from Europe in the United States, at least for some years after the War. The War, conducted as it has been by Germany, has been exceptionally destructive, and Europe will need a vast amount of its own savings to replace what has been destroyed. The United States, therefore, will have to look more to her own savings than in the past, while it is to be hoped that Europe will take a more correct view of its own interests than it has done hitherto.

Mr. J. E. Rovensky, Assistant Cashier of the National Bank of Commerce in New York, takes a

much more hopeful view of the new banking system of the United States than is generally taken by close observes. He affirms that though there are twelve District Banks, they are practically governed by a single board; and that, therefore, to all intents and purposes they perform the functions which would be performed by one great central institution. It is worth while quoting the opinion, not because any single individual can yet be in a position to pronounce confidently upon a new experiment, but because there is so much doubt in the United States regarding the experiment that it is well to find one confident observer, and one, moreover, who is engaged in banking business himself. Our own inclination is to regard the experiment as entirely in its very early stage as yet; that, therefore, it is impossible for any cautious man to form a definite opinion respecting it; and that it will be much more useful, and much more instructive, to learn what is thought when the War not only has come to a conclusion, but the revulsion in all forms of business that will follow the end of the War has had time to reveal itself.

All high-grade wheat stored in elevators in Canada, from Fort William to the Atlantic Coast, was taken possession of by the Dominion Government on November 28. The wheat so taken consisted of grades 1, 2, and 3 Northern. It is estimated that the quantity taken over was about 17 million bushels, and was owned by grain shippers and millers. According to a Montreal paper of the following day, the grain-growers in Canada still hold nearly 200 million bushels of wheat. The portion taken possession of by the Canadian Government, therefore, is only a small fraction of the whole growth of the Dominion, and probably will not have very much influence upon the condition of the country.

INTERNATIONAL MERCANTILE MARINE COMPANY.

A COMMITTEE consisting of James N. Wallace, Henry Evans, Harry Bronner, Frederick W. Scott, and Charles H. Sabin has been constituted, and is acting under a deposit agreement dated September 21, 1915. It asks for the deposit of Preferred stock in order that the interests of the Preferred stockholders may be protected through concert of action. The committee is firm in its opinion that the Preferred stockholders are entitled in any reorganisation to a very much larger interest than the present plan accords. There has been deposited under said agreement in New York over 66% of the outstanding Preferred stock.

The Guaranty Trust Company of New York, 33 Lombard Street, London, E.C., has been appointed Sub-Depositary under the deposit agreement of September 21, 1915, and holders of Preferred stock desiring to share in the benefits of said deposit agreement may deposit their stock certificates with said Sub-Depositary at its said office in London on or before the close of business on January 3, 1916. All stock certificates must be endorsed in blank for transfer or be accompanied by appropriate transfers in blank. At the time of deposit there must be paid to said Sub-Depositary on account of American taxes for transfers of stock the sum of 4 cents for each share deposited, and in addition depositors will at the same time be required to pay any English tax imposed upon such deposit and the insurance of certificates of deposit therefor.

GLENSHIEL.—Rubber harvested for the eleven months ended November 30, 1915, approximately 197,120 lb., of which 136,086 lb. have been sold at a gross average of 2*s*. 2½*d*. per lb., and approximately 36,960 lb. remain to be delivered at a gross average of 2*s*. 1*d*. per lb. Of next year's crop, approximately 115,360 lb. have been sold to date at a gross average of 2*s*. 2·28*d*. per lb.

PENNSYLVANIA RAILROAD.

No better guide exists as to the trend of business in the United States than is afforded by the course of the earnings of the Pennsylvania Railroad, which not only serves most of the important centres of industry —mining and manufacturing—lying between the Atlantic coast and Chicago, but also conveys vast quantities of agricultural products both to local markets and to the seaboard. Whereas during 1914 the volume of traffic declined considerably, the position now has completely changed and the railways have such a tremendous quantity of business to deal with that in the case of several of the companies embargoes have had to be imposed upon certain classes of traffic. At the present time the United States is enjoying great prosperity from the unprecedented volume and exceedingly high value of the cereal crops gathered this year, as well as from the unprecedented expansion in exports to all the world. This, of course, is helping the general trade of the country very considerably. Probably the most noteworthy instance of activity now prevailing is in the coal, iron and steel trades. Of course, in a large measure the busier conditions here are the result of the immense orders for manufactured materials of almost every kind for use in belligerent countries; but in no small degree the activity has been aided by the increased demands for domestic purposes, more particularly on behalf of the railways, who ordinarily are the chief customers of the great iron, steel and equipment concerns. During the period of doubt that existed as to whether or not the Interstate Commerce Commission would grant higher freight rates, and the industrial depression of 1913-14 the railways bought but sparingly of rails, new equipment, &c., but with the marked improvement in economic conditions, and with the still greater business that is anticipated in future, it has become imperative for the great railroads again to purchase freely all kinds of materials and supplies. The position of the railways has also been helped by the rise in freight rates and by the more reasonable attitude of the authorities towards the transportation industry.

The unfavourable conditions experienced by the Pennsylvania Railroad in 1914 continued well into the present year, and for the first five months of the

year to May gross earnings showed a decline of $4,224,000. Owing, however, to increased skill in operating the traffic this loss was slightly more than offset and net earnings showed the small gain of $268,000. Commencing with June the pendulum as far as gross earnings were concerned began to swing forward; and this movement has become more pronounced from month to month, the gross receipts having expanded nearly $6,000,000 in the second five months of the year. For the ten months to October the gain in gross receipts was thus $1,732,000, and by means of a saving of $4,056,000 in expenses an expansion of as much as $5,788,000, or 16%, was brought about in net earnings. This increase in net earnings does not, however, represent the addition to the net profit of the Company in the current year, for account has to be taken of the large amount of new bonded indebtedness recently created. Hitherto the Pennsylvania has not published monthly figures of miscellaneous income and interest charges, but, commencing with October, these data have been given, and the stockholders will now be informed month by month, not only as to the gross and net earnings, but as to the net profit also. This action of the Pennsylvania will be very highly appreciated by stockholders. While the trend of gross earnings is of interest to the general community, as indicating the course of trade, the course of the net profit, after meeting all expenses and interest charges, is of special interest both to stockholders and to investors generally.

Miscellaneous income for the ten months to October was $1,689,000 higher, while taxes were $121,000 less than in 1914. The expansion in net income for the period was thus almost $7,600,000. The issue of $49,000,000 of 4½% First Mortgage Bonds in January last and of $65,000,000 of 4½% General Mortgage Bonds in May last was mainly for the purpose of redeeming $87,000,000 of Convertible Bonds maturing on October 1. Nevertheless the interest charges for the ten months showed an increase of $5,117,000. The gain in net profit for the ten months to October was thus $2,481,000. The net profit earned by the Railroad for the year 1914 amounted to $32,306,000, so that, apart from any further addition to net profit in the last two months of this year, the net profit for 1915 will be $34,787,000, a sum equal to 7·3% upon the $500,000,000 of Common stock. This is after allowing for the same appropriation as last year, namely $1,785,000, to sinking funds.

For the relatively satisfactory net results secured for the current year the officers of the road are deserving of high praise, the whole of the reduction in expenses having been due to their successful efforts to economise in the matter of conducting transportation. Doubtless this achievement is the result of cutting down the freight-train mileage and of adding still further to the average load of freight trains. Outlays upon maintenance of way, etc., were $455,000 higher than a year ago, but the proportion of these expenses showed little variation. Conducting transportation outlays, however, were reduced as much as $4,549,000, with the result that the ratio of this item of expenditure to gross receipts was brought down from 39·4% to 36·1%. In no year since 1901, with the single exception of 1909, has the conducting transportation ratio been lower than for 1915, although in the current twelve months the rate of wages is higher than ever before. How the earnings, expenses, charges and profits for the ten months to October last compare with those for the corresponding period of 1914 will be apparent from the following Income Statement:—

Results of Pennsylvania RR. 10 Months to October.

	1915. $	1915. % of Gross.	1914. $	1914. % of Gross.	Inc. or Dec. $
Gross receipts ...	159,859,000	—	158,107,000	—	+1,732,000
Oper. Expenses:					
Maint. of way ...	24,772,000	15·6	20,956,000	13·2	− 178,000
Do. equipment ...	31,552,000	19·7	30,899,000	19·6	+ 633,000
Cond. transportation ...	57,784,000	36·1	62,333,000	39·4	−4,549,000
Gen. & Misc. expenses ...	6,111,000	4·0	6,373,000	4·0	+ 38,000
Total	116,433,000	72·8	120,555,000	76·2	−4,056,000
Net earnings ...	43,540,000	—	37,552,000	—	+5,788,000
Misc. income ...	15,467,000	—	13,778,000	—	+1,689,000
Less taxes	6,515,000	—	6,454,000	—	− 121,000
Net income ...	52,494,000	—	44,896,000	—	+7,598,000
Int. and other charges ...	21,458,000	—	16,341,000	—	+5,117,000
Net profit	31,036,000	—	28,555,000	—	+2,481,000

For the year 1914, owing to a variety of adverse factors, the profits of the Pennsylvania *Company* declined to $2,816,000, after allowing for sinking funds. This sum was equal to 3·5% on the stock, but the *Company* distributed two dividends aggregating 4%, 3% having been paid in June 1914 and 1% in December last. In the current calendar year the *Company* is doing very much better, and for the ten months to October has secured an additional $2,050,000 of profit, making a net profit of $4,866,000 for 1915, irrespective of further gain in November and December. This indicated profit is equal to a dividend of over 6% upon the stock of the *Company*, the whole of which is owned by the Pennsylvania Railroad. The only dividend received this year by the *Railroad* upon the Pennsylvania *Company's* stock was 2% in June last, which brought in $2,400,000, against $3,200,000 received in June 1914. In view of the improved results of the *Company*, another dividend of 2% is likely to be forthcoming at the end of this month, and the additional income that will thus be derived by the *Railroad* will go a long way towards offsetting the increase in interest charges for the last two months of 1915, so that it may reasonably be assumed that the increase in net earnings for November and December will practically represent the increase in net profit for the period, and it would not be surprising if for the whole of 1915 the profit earned is equal to about 8% on the stock.

Then, again, the Pittsburg, Cincinnati, Chicago and St. Louis, commonly known as the "Panhandle," the majority of whose Preferred and Common stocks is held by the Pennsylvania *Company*, is likewise benefiting very considerably from the greater activity prevailing in the iron, steel, and coal industries. Whereas for 1914 the profit of the line amounted to only $1,434,000, which was equal to 4% on the Preferred and to less than 1% on the Common stock, for 1915, ignoring improvement in November and December, the profit amounts to $2,476,000. This latter sum is equal to 4% on the Preferred and to almost 3½% on the Common stock.

How the present indicated profits for 1915, that is without allowing for any further improvement in November and December, compare with those for 1914 will be evident from the following statement:—

	Profit 1914* $	= % on Stock. %	Inc. in Profit 10 Mos. to Oct. 1915 $	Profit 1915 apart from Gain in Nov. and Dec. $	= % on Stock %
Penn. RR. ...	32,306,000	= 6·5	+2,481,000	34,787,000	= 7·0
Penn. Co. ...	2,816,000	= 3·5	+2,050,000	4,866,000	= 6·1
"Panhandle"	1,434,000	= (4 Prefd.) (0·4 Com.)	+1,042,000	2,476,000	= (4 Prefd. (3·4 Com.

* After appropriations for sinking funds as follows: Penn. RR. $1,785,000; Penn. Co. $1,912,000; "Panhandle" $880,000.

The course of earnings and expenses in recent months and the results with which comparison will

Business transacted by the Company:—

(1) **Life Insurance,** with and without Profits, with special Provisions for the payment of **Estate Duties** and for **Children's Education.**

(2) **Fire Insurance** of every description.

(3) **Insurances to cover Loss of Rent, Interest, and Profit** consequent upon Fire damage to property.

(4) **Marine Insurance.**

(5) **Burglary, Theft, and Plate Glass Insurance.**

(6) **Accident,** including Personal Accident, Motor Car, and Employers' Liability Insurance.

Fidelity Guarantee and Sinking Fund Policies are also granted.

Applications for Agencies are entertained, and Prospectuses with other papers may be had on written or personal application.

ROBERT LEWIS, General Manager.

INSURANCE AND THE WAR.

Never have the advantages and benefits of insurance been so apparent and so widely recognised as during the present War, and it is evident that one of the many consequences of the War will be a great extension of insurance in all its branches. At the beginning of the War, when a part of the enemy's fleet was still at large, and when ocean transit presented unknown dangers, no merchant ships would leave port or harbour until a scheme of insurance had been arranged to provide against war risks. And even when the plan was arranged, few vessels would venture forth until the war-risk premiums on hull and cargo had been reduced to rates that were not too burdensome. In this way the British people are indebted in no small measure to the system of insurance which the Government introduced for the regular supply during the War of the food and raw material upon which their welfare so completely rests. But what is so apparent in war, and is less obvious in peace, is equally effective both in peace and war. The British people would have been unable to build up their great commerce and to obtain so large a part of their supplies of food and material from countries over the seas had not the present system of maritime insurance enabled shipowners to pool their risks and to reduce individual losses to relatively small payments for insurance.

Another object-lesson in the value of insurance has been given by the damage from Zeppelin raids, and by the peace of mind enjoyed by persons whose property is insured against injury from this method of warfare.

Furthermore, the advantages of life assurance have been more keenly recognised than ever by insured persons who never expected to become soldiers, and who, at their country's call, have volunteered for the fighting-line.

The events that have followed one upon the other so rapidly since the summer of last year have brought home to the world the uncertainties of life as they were never realised before, and have elevated into great prominence the value of insurance as a safeguard against the monetary consequences of the major and infrequent evils, as well as of the minor misfortunes of life of everyday occurrence. And the wide recognition of the benefit of insurance during the present War cannot fail to bring about a much greater and more rapid extension of its principles in the coming years. Indeed, even greater benefits may yet be conferred upon the country by means of insurance in the present crisis. For instance, it may be possible to induce the greater part of our people, now that they are enjoying exceptionally large incomes, to insure against unemployment, which cannot fail to come after peace is concluded and the Army is disbanded, and by so doing not only provide themselves with the great sum of money they will need in order to get through the period of severe trade depression, but to supply the country immediately with a large amount of funds for the prosecution of the War. Roughly speaking, there are about 21,000,000 persons employed in this country in one form of industry or another, and of this total only about 2½ millions are assured against unemployment under the State scheme, while the total number of members of trade unions which receive unemployment allowances is under 4,000,000, including those insured against unemployment by the State. In view of the chances of a large amount of unemployment when the War is over, it should not be difficult to induce a great many persons to pay, in this period of full employment, substantial sums of money for insurance premiums against the risk of unemployment after the War. The payment of 1*s.* per employed person per week would, in a single twelve months, provide after the War an additional sum of about £44,000,000 for unemployment pay or other benefits to the wage-earning classes.

Thus insurance has already settled some of the problems which the country has had to face, and it may well be that its beneficent action may again be brought into play in order to overcome further difficulties, which otherwise may prove to be insurmountable.

While the immediate action of insurance has enabled the country to meet some of the difficulties arising out of this great War, and may render still greater assistance to it in future, one must not overlook the part that insurance has played in the work of building up the wealth and income of the country, and in thus enabling it to meet its present vast expenditures.

The wealth accumulated and held by our life offices alone now reaches the great sum of £551,000,000; but this is only a very small part of the wealth accumulated by means of assurance. The total sum saved annually by means of life insurance premiums by individual insurants in British offices is £50,536,000, and to this should be added the income derived from interest on investments, which now amounts annually to £17,325,000, so that the total sum saved is £67,861,000 per annum. From this amount must be deducted expenses of management and commissions, which reach £12,185,000. This leaves a net annual sum of no less than £55,676,000 accumulated by means of life assurance in the course of the year. Of this amount about £15,000,000 was employed by the companies in the purchase of new securities, and this sum was the direct contribution to the wealth of the nation in the past year through assurance. But beyond this sum a large part of the remaining £40,000,000, which was paid away to assurants in claims, was invested by the recipients of the money in one way or another, and, without running the risk of over-statement, it is obvious that for every £1 of wealth accumulated directly by the insurance offices £2 of wealth has been amassed through them by insurants whose policies have matured, and who reinvest a large part of the great sums they receive each year. Hence the total wealth accumulated in this country by means of life assurance, and that exists in one form or another to-day, is not only the £551,000,000 of funds possessed by the life offices, but something like £1,000,000,000 of additional wealth possessed by persons, or the heirs of such persons, to whom the sums assured have been paid since life insurance was introduced. In other words, the country is probably indebted to insurance for something like £1,500,000,000 of the great wealth it possesses to-day. The investment of this great sum of capital has, moreover, added largely to the national income, and has thus contributed in no small degree to the ability of the nation to meet its existing enormous war expenditures. Moreover, beyond the powerful assistance thus indirectly afforded by our insurance offices to the country at this time, they are directly assisting it to meet its expenditures by investing not only the new funds they accumulate from day to day in various kinds of Government loans, but also a substantial part of their old funds, which were previously placed in American and other securities, and which they can realise abroad, and reinvest at home to the great advantage of themselves and of the country.

In no small measure the ability of the country to pay for the goods bought from America in the past year arises from the transfer of the funds of our insurance offices from American to British securities.

Thus our insurance offices are playing a great part

in assisting the country to solve the unprecedented financial and economic problems with which it is faced at the present time, and it is evident that the wider experience now being gained of the advantages of insurance will bring about its still more rapid extension in future. Indeed, not improbably the principles of insurance will be applied in a much fuller manner than hitherto, as a precaution against unavoidable misfortunes, the effect of which can be largely neutralised by foresight and by prudent preparation.

No one can doubt the country's power to pay out of its income year by year much greater sums for assurance than it is now doing. Indeed, it is remarkable that the nation devotes so little of its income to assurance. True, the amount has shown enormous expansion in the past generation, for in 1885 the premiums paid for life assurance were only £16,000,000, whereas in 1915 they are £51,000,000, an expansion in 30 years of as much as 220%. But when one recollects that the national income has nearly doubled since 1885, and that it is now about £2,400,000,000 a year, one realises that the nation is still devoting only about 2% of its great income to assurance, and that the amount ought to be much greater. It is interesting to note that persons with an aggregate taxable income of £907,000,000 in 1912-13 only claimed allowances in respect of £12,500,000 of life assurance premiums, this sum representing no more than 1½% of their incomes. We imagine, however, that many people were either ignorant of the concession which the Government allows in respect of life-assurance premiums when assessing income to taxation, or were too lazy to claim the allowance, and that the total sum paid in insurance premiums by payers of income tax was a great deal more than £12,500,000. If, however, we assume that all the premiums paid for ordinary assurance, amounting to £32,300,000, come from persons with incomes of over £160 a year the proportion would be only about 3% of the income existing prior to the War. Inasmuch as a large number of persons with incomes below the income-tax level are insured in the "ordinary" section, it is obvious that even among the well-to-do less than £3 per cent. per annum of income is on the average devoted to assurance.

Of course many persons devote a much larger percentage of their income to assurance, and it follows that a large section even of the persons that pay income tax are not assured at all, or are assured for very inadequate sums. The number of persons with incomes of over £160 a year and liable to income tax is calculated to be about 1,250,000, and, including the very large number of persons who do not pay income tax and who are insured in the ordinary section, it is doubtful if the number of "ordinary" policyholders is over 1,500,000. It is true that the number of "ordinary" policies issued is about 3,200,000, but most people have several policies, and the actual number of persons insured in the ordinary section is less than half the number of policies issued.

In brief, the sum devoted to assurance even by the relatively wealthy is extraordinarily small, being substantially less than 3% of their incomes.

When we come to the working classes the situation is in some respects more satisfactory, although in others there is abundant scope for improvement. Roughly speaking, the number of persons—men, women, and children—with incomes below the income-tax level is about 40,000,000, and of this great total nearly 38,000,000 are assured in the "industrial" section. Doubtless some persons have more than one "industrial" policy; nevertheless, substantially the whole of the working classes of this country are insured for small sums. As regards recognition of the value of insurance, therefore, the situation is highly satisfactory. But when one comes to the average sum assured the situation is far from satisfactory. The total sum paid for life assurance by the working and lower-middle classes is no more than £18,000,000 per annum, or less than 1½% of their incomes, while the average amount assured per policy is less than £10. This situation shows wonderful improvement since 1885, for in that year the premiums paid for industrial assurance reached only £3,289,000, so that in 30 years there has been a growth of nearly 500%, with an increase of less than 100% in income. Nevertheless, hitherto there has been practically no life assurance among the working classes at all. Assurance to them still merely means assurance of burial expenses for each member of the family—there is no provision for wife or family if the breadwinner dies. There are thousands, indeed millions, of working men, whose incomes are now large enough to enable them to insure their lives for substantial sums, who devote no more than a few pence a week to assurance, and who are merely waiting for some society to create a form of assurance that will meet their special needs in order to provide substantial sums for assurance. Would it not be possible to create a sort of omnibus policy, by means of which a working man would be insured against sickness, accident, unemployment, death and old age, and all the overlapping and expense which now come from separate organisations and separate commissions for each of these purposes would be avoided? For such a policy a working man would be warranted in paying away a substantial percentage of his income. But at present, if he takes out a life policy he may run into illness or unemployment and be unable to maintain the premiums, and possibly may have to surrender his policy. Already a working man is actually assured in one way or another against these things, either by the State, his employer, or himself, and the only step that needs to be taken is to consolidate, to simplify, to cheapen, and to extend, the extension being for the purpose of inducing the whole of the working classes to assure against unemployment and death in a much more comprehensive manner than hitherto. The work of inducing the working classes with incomes over the poverty line to devote 10% of their wages to insurance with all these objects in view should not be an impossible one, especially as such a payment would be supplemented by the contributions of employers and of the State in respect of accidents, unemployment, ill-health, and old age, and would assure them very substantial sums against all the greater misfortunes of life. If such a plan were adopted the sums devoted to life assurance premiums each year would be substantially greater than £51,000,000, or a little over £1 1*s.* 9*d.* per head of population, and only a little over 2% of the nation's income.

Not only from the individual, but from the national, standpoint, is a great increase of assurance desirable both among the wealthier and the working classes. The money saved by means of assurance will not only bring the individual insurants themselves very great advantage, but it will be of immense benefit to the State. During the current crisis the insurance offices have rendered the country valuable service by selling their investments in American railway and other foreign and colonial securities, and lending the proceeds to the Government to meet the war payments, and before the War is won they may render still greater assistance in this manner. It is very desirable that during the War insurance offices should increase their business to the greatest extent possible, and so not only help to provide the Government with the loans it needs for the War, but at the same time place themselves in a position to buy back from the United States after the War the securities they are now selling, or to lend money to the Government to pay off any temporary loans it may raise in the United States or elsewhere. Moreover, it is essential to remember that the nation as a whole is spending upon war the £400,000,000 per annum of savings which otherwise it would use for reproductive purposes, and

that after the War is over much greater savings should be made for a number of years in order to recover the savings thus expended. If after the War the nation were to save £600,000,000 a year instead of £400,000,000—and such saving could easily be effected if the need for it were recognised—the savings spent upon war in two years would be recovered in four years; while if the War were to last three years, and to involve the expenditure of £1,200,000,000 of money that otherwise would have been saved, the whole of the loss would be recovered in six years. In other words, at the end of six years the nation would be as wealthy as if there had been no war. It is of very great importance that such savings should be effected, and that the economic consequences of the War should be obliterated at the earliest moment possible. A survey of the field of insurance reveals clearly that the insurance offices, by inducing both the wealthy and the working classes to make greater provision than hitherto for wives, children, or old age, can greatly assist the nation to save much larger sums in future than it has in the past, and so to replace the savings now being expended upon war. The growth in the premium income of life offices in the last 30 years has been 220%. Such a rate of growth in future would carry the premium income of our offices from £50,500,000 at present to £162,000,000 in 1945. If, however, the offices were to realise the importance of inducing the community to save by insurance much greater sums in future, the amount of insurance would speedily be doubled, and the extra premiums would provide a substantial part of the extra saving of £200,000,000 a year which the country needs to make not only during, but after, the War.

In the past the growth of insurance was in some measure checked by the constant fall in the rate of interest up to about 1889. This meant that the new funds accumulated had to be invested at lower rates of interest than old funds, and that, the greater the increase of business, the smaller the rate of bonus distribution. This situation is now completely reversed, for new business and an expanding premium income mean the investment of even greater sums at the high and profitable rates of interest now current, and that new business will mean not reduced, but increased, bonuses. Moreover, not only will the rate of interest be profitable, but there is the prospect of a great rise in the values of the investments after the close of the War.

The substantial rate of growth in assurance since 1885, when the advantages of the nation's new system of universal education began to be reaped, will be evident from the following contrast:—

	1915.	1885.	Increase.	
	£	£	£	%
Premium income of life offices	50,536,000	15,845,000	+34,691,000	+220
Population ...	46,450,000	36,016,000	+10,434,000	+ 29
Per head ...	£1.09	£0.44	+ £0.65	+148

The reduction in the rate of interest on insurance investments between 1895 and 1905, and the recovery up to last year, are shown by the following:—

	Mean Life and Annuity Funds.	Interest and Dividends.*	Rate per Cent.
	£	£	
1915	448,848,000	17,326,000	3.86
1905	313,078,000	11,391,000	3.64
1895	203,391,000	7,791,000	3.83

* After deducting income tax.

The reinvestment of a large amount of money realised from the sale of American funds and the investment of new money should shortly bring the average rate of interest to over 4%. Of course, beyond the advantage derived from the safety of money invested in insurance policies is the fact that insurance premiums are free of income tax—an important consideration with the rate of tax now 3*s.* 6*d.* in the £, and with the tax likely to be maintained at a high figure for many years to come.

The following statement will show very clearly how greatly the popularity of endowment assurance among the middle and working classes has contributed to the growth of "ordinary" insurance in the last 20 years:—

*"Ordinary" Business.**

Year.	Whole Term of Life.	Endowment Assurances.	Miscellaneous.	Total.
	£	£	£	£
1915 ...	**483,259,436**	**331,251,864**	**57,602,276**	**872,113,576**

1909 ...	249,683,108	7,998,353	28,126,158	285,807,599
1908 ...	243,516,968	7,735,417	27,192,116	278,444,501
1907 ...	234,571,308	6,276,904	26,621.401	267,469.613
1906 ...	220.706,385	6.088,817	24,758,747	251,553,949
1905 ...	**213,087,579**	**5,321,787**	**23,457,615**	**241,866,981**
1895 ...	**137,090,222**	**1,612,181**	**5,440,166**	**144,142,569**
20 yrs.	**+181,329,500**	**+13,723,541**	**+40.006.681**	**+235.059,722**
per cent.	**+149%**	**+839%**	**+840%**	**+183%**

* The above figures are based on returns deposited for the most part during five years prior to the years given, and are, therefore, merely an approximation to the amount of contracts in force. Those for 1915 are our own computations, based on the valuation returns issued up to date. Those for 1914 are also partly computed, owing to the official statement for the year being, as regards endowment a ces, in a new form, not comparable with previous figures.

The immense increase since 1895 in the number of policies issued by the industrial companies for sums of about £10 per policy is shown in the following statement:—

Industrial Companies.

Year.	Number of Policies.	Amount Insured. £	Average per Policy. £
1915	37,579,905	363,326,789	9·67
1905	24 668,532	241,869,649	9.80
1895	14,990,581	144,142,569	9.61
Increase, 20 years ...	+22,589,324	+219,184,220	+0.06
Do. per cent. ...	+151%	+152%	+00.6%

The rapidity with which the funds of the offices are accumulating is shown in the following comparison covering a period of 30 years:—

*Accumulated Balances.**

Returns.	Total Balance. £	Addition for Year. £
1915	**449,916,465**	**12,261,783**
1914	437,654,682	14,956,271
1913	422,698,411	13,682,372
1912	409,016,039	13,972,734
1911	395,043,305	11.023.872
1910	384,014,433	13,646,773
1909	370.367,660	12,047.626
1908	358,320,034	13,172,483
1907	345,147,551	14,032,401
1906	331.115,150	14,026.207
1905	**317,088,943**	**12,440,691**
1895	**209,300,435**	**9,052,476**
1885	148,351,762	4,653,705

* Includes capital of companies whose business is limited to life assurance.
† But for the removal of capital from life account in the case of two companies transacting other business in the return for 1900 the accumulated balances would have been £251,818,506, and the addition for the year would have been £10,476,718. This is the real addition for comparative purposes.

The nature of the securities in which the great funds of the insurance offices are placed is shown by the following statement of the investments according to the latest reports, in comparison with those published last year, in 1905, and in 1895:—

Insurance Fund Investments.

	Year—1915. £	1914. £	1905. £	1895. £	Inc. or Dec. 10 Years. £
Mortgages ...	113,891,928	113,878,037	96,094,511	84,837,431	+ 17,797,417
Loans on rates, &c.	30,766,742	31,399,788	42,636,310	27,945,482	− 11,869,568
Loans on policies & personal security	32,621,554	31,518,305	19,364,110	12,141,048	+ 13,257,444
British Gov. securities	6,067,472	5,314,421	9,365,537	5,716,926	− 3,298,065
Indian & Colonial Gov.securities, &c.	45,291,138	42,242,016	19,856,348	17,112,534	+ 25,434,790

Cash, stamps, &c.	11,104.189	8.321,616	5,904.354	7,987,462	+ 5,199,835
Miscellaneous ...	1,647,934	1,696,181	1,098,764	567,209	+ 549,170
Total ...	551,150.362	530,647,085	366,717,138	240,397,866	+184,433,224

The changes in the form of investments made by life assurance undertakings are indicated by the following table, based on the above figures. It shows the percentage of the funds invested now and 10 years ago in various categories of securities. The outstanding features are the decline in low interest-bearing investments and the increase in Debentures, on which excellent yields are now obtainable:—

	Per Cent. of Total Investments. 1915. %	1905. %	Change, 10 Years. %
Mortgages and loans	34·2	45·3	−11·1
British and Indian Govt. loans	9·9	8 3	+1·6
Foreign Government securities	8·7	3 0	+5·7
Debentures	26·1	18·7	+7·4
Stocks and shares	9·7	11·8	−2·1
Land, property, &c.	9·2	10·2	−1·0
Life interests and reversions ...	2·2	2·7	−0·5
	100·0	100·0	

To show the proprietary capital invested in life assurance business, the life and annuity funds, the fire and marine funds of the companies transacting life business, the reserve and other funds, &c., we set out the liabilities of insurance companies, according to the latest reports, in contrast with the liabilities according to the returns for 1914, 1905, and 1895, and we add the increase for the past 10 years:—

Liabilities of Insurance Companies.

	Year—1915. £	1914. £	1905. £	1895. £	Inc. or Dec. 10 Years. £
Capital	19,202,818	19,381,993	13,702,531	12,227,006	+ 5,500,287
Life and annuity funds	448,827,971	436,702,389	313,078,233	203,391.610	+135,749,738
Fire insurance funds	22,261,673	22,159,674	14,422.783	9,753,995	+ 7,838,890

The accumulation of funds by the "industrial" offices will be seen from the following contrast of their income and outgo for the past two years, for 1905, and for 1895:—

"Industrial" Companies.—Income and Outgo.

	Year—1915. £	1914. £	1905. £	1895. £	Increase 10 Years. £	%
Income ...	20,449,860	19,653,978	12,255,257	6,938,354	+ 8,194,603	+66
Outgo ...	17,565,085	16.923,247	9,935,661	5,523,725	+ 7,629,424	+77
Balance ...	2,884,775	2,730.731	2,319,596	1,414,629	+ 565,179	+20
Brought forwd.	55,780,939	53,050,208	27,069.983	11,875,423	+28,710,956	—
Carried forwd.	58,665,714	55,780,939	29,389,579	13,290,052	+29,276,135	—

The economy of the "ordinary" offices becomes greater year by year, and in the past twelve months the percentage of expenses and commission to premium income has been only 13.3 per cent., in comparison with 13.5 per cent. 10 years ago and 14.2 per cent. 20 years ago.

To show the relatively small proportion of the premium income of "ordinary" companies absorbed for commission, expenses of management, and interest and dividends on proprietors' capital, according to the latest reports, in comparison with those of 10 years and 20 years ago, we give the following statement:—

"ORDINARY" COMPANIES.

Proportions of Premium Income Absorbed by Commission, Expenses, and Interest on Capital.

Year.	Commission. %	Expenses of Management. %	Interest and Dividends on Capital. %	Total. %
1915 ...	5·4	7·9	1·6	14·9
1905 ...	5·2	8·3	1·9	15·4
1895 ...	5·2	9·0	3·5	17·7

We would point out that the above is merely the percentage of the premium income absorbed for expenses, commission, and interest. The proportion of the expenses to the total income, including income from investments and consideration for annuities, is only 9.5 per cent.—a very low figure. How small is the proportion of the total income of the "ordinary"

life offices absorbed for expenses will be evident from the following statement:—

Economy of "Ordinary" Assurance.

Income.	£	£
Premium income	32,314,000	
Consideration for annuities ...	1,993,000	
Interest and dividends, less tax ...	15,209,000	
Total income		49,513,000
Expenses.		
Commission	1,641,000	
Expenses	2,555,000	
Interest and dividends on capital ...	528,000	
Total expenses...		4,724,000
Proportion of expenses to income ...		9·5 %

For the purpose of showing the total sums annually received by the "ordinary" companies as premium income, interest, and also for annuities, we contrast beneath the details of their income for the past two years and for 1905 and 1895:—

"Ordinary" Companies.—Income.

	Year—1915.	1914.	1905.	1895.	Inc. or Dec. 10 Years. £	Inc. or Dec. 10 Years. %

The growth of the premium income of the "industrial" offices in the last 10 and 20 years has been enormous. This will be apparent from the following contrast:—

"Industrial" Companies.—Income.

	Year—1915.	1914.	1905.	1895.	Inc. or Dec. 10 Years. £	Inc. or Dec. 10 Years. %
	£	£	£	£

Capital paid up ...	—	—	102,986	104,48 ·	– 102.986	—
Miscellaneous ...	359 085	360.674	120 451	43,53 ·	+ 238,634	—
Total	20,449,860	19,653,978	12,255,257	6,938 354	+8,194,603	+66

The cost of "industrial" assurance is, of course, very heavy. In the following table we set out in detail the sums paid by the "industrial" companies for claims, cash bonuses, commission, expenses of management, dividends on capital, &c., according to the reports published in the present year, in 1914, 1905, and 1895:—

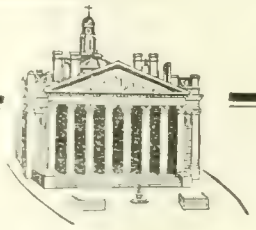
"Industrial" Companies.—Outgo.

	Year—1915.	1914.	1905.	1895.	Inc. or Dec. 10 Years. £	Inc. or Dec. 10 Years. %
	£	£	£	£		
Claims	7,798,878	7.248.056	4,255,966	2,418,754	+3,542.912	+83
Surrenders	271,739	274,224	79,775	25,220	+ 191 964	—
Annuities	—	—	12 690	3,806	– 12,690	—
Commission ...	4 619,168	4,512,005	2,788,315	1,708,887	+1,830 853	+70
Do. % of premium income	(25·7)	(26·0)	(25·1)	(26·7)	+ (0·6)	—
Expenses of management	3,369,838	3,463,577	2,039,335	1,080,028	+1,33·,503	+65
Do. % of premium income	(18·7)	(20·0)	(18·4)	(17·0)	+ (0·3)	—
Shareholders' dividends and profits	728.662	758,784	557.282	286,119	+ 171 380	+30
Do. % of premium income	(4·0)	(4·4)	(5·0)	(4·5)	+ (1·0)	—
Miscellaneous ...	776,800	666,601	202,298	911	+ 574,502	—
Total	17,565,085	16,923,247	9,935,661	5,523,725	+7,629,424	+77

The proportion of expenses for commission, management, and interest on capital to the premium income amounts to no less than 48.4 per cent. This will be seen from the statement appended:—

COST OF "INDUSTRIAL" ASSURANCE.

Ratio of Premium Income paid for Commission, Expenses, and Interest.



Year.	Commission. %	Expenses of Management. %	Int. & Divs. on Capital. %	Total. %
1915 ...	25·7	18·7	4·0	48·4
1905 ...	25·1	18·4	5·0	48·5
1895 ...	26·7	17·0	4·5	48·2

Including the whole of the income from premiums, annuities, and interest, the proportion of expenses of all kinds to the income is as high as 43.3 per cent.

The expensiveness of "industrial" assurance will be apparent from the following statement:—

Expensiveness of "Industrial" Assurance.

Income.	£	£
Premium income	17,974,000	
Interest and dividends...	2,117,000	
Total Income		20,091,000
Expenses.		
Commission	4,619,000	
Expenses of management	3,370,000	
Interest and dividends on capital to shareholders	728,000	
Total expenses		8,717,000
Proportion of expenses to income ..		43·3 %

Incorporated A.D. 1720.

West End Office—44 PALL MALL, LONDON, S.W.

INDIVIDUAL COMPANIES.

HOW A DECADE'S GROWTH OF BUSINESS WAS DISTRIBUTED.

In the succeeding sections we analyse from various points of view the position of various companies transacting life assurance business, with the object of affording useful information in a classified form to assurants and would-be assurants. Here, by way of preliminary, we consider them only from the broad point of view of showing how the steady and satisfactory increase in the volume of business has been distributed during the last decade, the object being to show which undertakings most attract the assuring public, and on what lines future developments may be expected. Reference to former Supplements will show that for many years past certain institutions have been prominently in favour.

It is necessary, however, at the outset to emphasise the fact that increase in premium income alone is by no means a safe criterion in making choice of an office likely to give the best ultimate results. In this, as in all other directions, mere expansion of business does not necessarily mean corresponding profits. Sometimes such an increase is secured by extravagant expenditure, or by lack of due scrutiny of risks, and both of these tend to reduce, and not to augment, the sources from which bonuses are derived. Indeed, expansion of premium income is only necessary and beneficial so long as it is fully to counterbalance the wastage from deaths, surrenders and lapses. Any increase beyond this point is only desirable so far as it can safely be obtained without undue cost. It is therefore clear that rapid expansion in business is no determining test in the selection of an office. From the general economic point of view, however, it is interesting to see which companies secure the greatest proportion of the growth in income.

In order to show the growth of income and its distribution between the various offices we have classified them under various categories, according to the increase in premium income which has occurred during the past 10 years, a time which is, in the majority of cases, sufficiently long to eliminate exceptional fluctuations from year to year. It is, however, necessary to point out again that mere comparison of figures over a decade may present any particular company in too favourable or unfavourable a light. Contraction after a long period of heavy outlay may be not only prudent but necessary, and a decline in premium income in such a case is a sign of health, and not of weakness. On the other hand, as events have often proved in the past, a very rapid increase in premium income may be bought too dearly, and may lead in the long run to the weakening of the financial position.

The principle on which the following tables are constructed is to contrast in the case of each office the premium income in 1914 with that earned in 1904, columns being appended to show the actual percentage increase or decrease. These are followed by a similar comparison of the sums earned in the way of interest on the accumulated funds. This is, of course, a matter of great importance. Most of the leading offices which have been working over a lengthened period have managed their affairs so prudently that out of the premiums they have received in the past they have accumulated funds so considerable that in some cases they amount to from 50 to 100 per cent. of the annual premium income. It is obvious, of course, that earnings from interest are altogether to the good from the policyholder's point of view, because, as we show later, the premiums are based upon calculations which provide for the return of the sum stipulated at the outset, and also for expenses and contingencies. Clearly, therefore, if as much as, or even a considerable proportion of, the amount of the premium income is earned yearly from outside sources, not only is the financial stability very much greater, but bonus prospects may be regarded as extremely satisfactory. From this point of view the aggregate figures given below are decidedly interesting and welcome.

They show that 61 companies had an aggregate premium income in 1914 of no less than 38,037,000 millions sterling, which was nearly 41 per cent. larger than 10 years earlier. Further, the total aggregate net interest which they earned was £17,830,000, or a gain of nearly 57 per cent. on 1904. Thus both financial stability and bonus prospects are, speaking broadly, much better than they were 10 years ago, apart altogether from the fact that the rate of interest which the companies can obtain on new investments has for some years past been very much higher than it was in 1904.

The companies are divided into sections according to the amount of their growth of net premium income during the past 10 years. It will be noticed that in the first and most important category the increase has been more than twice as much as in any other, and it is worthy of remark that four of the companies included therein are Colonial offices, and that, for the most part, the working expenses are on a moderate basis. The second section also contains a Colonial office and various other companies of the highest rank; while in the third, fourth, and fifth sections many excellent companies are placed. In the sixth section there is a certain proportion of what may be described as special offices: that is, those which cater principally for certain categories of the community, or conduct their business in particular ways; while the seventh is the only instance of companies which record decreases. The following summary of the tables dealt with enables a bird's-eye view to be taken of the growth of income and funds:—

		Premium Income. (000's omitted.)				Interest Earned (Less Tax). (000's omitted.)

THE GROWTH OF ENDOWMENT ASSURANCE.

In the earlier portion of this Supplement we have given aggregate figures which show very clearly the enormous growth of endowment assurance during the past 20 years, and in succeeding pages we explain the various ends which it can be made to serve. At this stage it is desirable to point out, by means of statistics obtained from the valuation returns of the various offices, what the developments of individual companies have been in this direction. The method we adopt is to set out with regard to each undertaking the comparative position of the policies in force at the last valuation and 10 years previously, separating endowment assurances from whole-life and miscellaneous policies. The latter are given first, with the actual and percentage increase or decrease, followed by similar figures with regard to the former and statistics on the same basis relative to the total policies in force. The total figures show, as in previous years, a considerable increase, but the figures relating to endowment assurance are specially striking. While there was an increase of 28 per cent. in whole-life and miscellaneous assurance, which is an adequate and satisfactory improvement, the growth in endowment assurances was much more rapid. A gain is recorded of no less than 77 per cent., or more than two and-a-half times the rate of increase in other kinds of policies. The value of the endowment assurances in force at the date of the latest valuations is nearly 41 per cent. of that of whole-life and miscellaneous policies issued, and it seems probable that within a comparatively short time it will reach 50 per cent.

We draw attention elsewhere to the fact that the great growth of life assurance during recent years is mainly due to the success which has attended systematic efforts to cater for the small policyholder, who formerly was considered hardly worth attention. From this point of view it is significant that assurants for relatively small amounts are contributing largely to swell endowment assurance figures, an important indication of the extent to which habits of thrift are increasing among those with very limited means. Those acquainted with the character of the business done by the various offices will readily discern this from a perusal of the full statistics given below, but, for the sake of others less familiar with the individual connections of the companies, we extract the following particulars of offices which in the 10 years preceding the last valuation secured an increase in the amount of endowment assurance at risk of over two millions sterling.

Twenty-two offices, or about a third of those with regard to whom particulars are given below, fall into this category. The actual and percentage increases recorded during the past decade are as follows, the companies being ranged according to their individual expansion in endowment assurance business:—

	Increase. Actual. £	Per Cent.
Prudential (Ordinary)	27,214 000	55
Australian Mutual Prov. (Ord)...	10,623,000	48
Norwich Union	9,477,000	296
Refuge (Ordinary)	8,458,000	229
National Mutual of Australia ...	7,828,000	157½
Scottish Widows'...	6,510.000	98
Pearl (Ordinary)...	6.374.000	472
Standard	6,209,000	173
Sun	4,715.000	138½
Colonial Mutual	4,069,000	127
Alliance	3 862.000	113½
Legal and General	3,755.000	469
North British and Mercantile ...	3,643,000	68
Commercial Union	3,617,000	252
National Provident	3,373,000	63½
Royal	3,026,000	46
Gresham	2,427,000	19½
Law Union and Rock	2,236,000	60¾
United Kingdom Provident ...	2 236.000	43
Wesleyan and General (Ord.) ...	2,155,000	326
Scottish Amicable	2,024,000	208
Royal Exchange	2,005,000	139
Total	125,836,000	

The 22 offices just specified secured more than 80 per cent. of the total aggregate increase in endowment assurances as recorded in the grand total figures below. It is, moreover, noteworthy that four of the five offices which head the list have important industrial departments, and cater in their ordinary branches largely for small policyholders. These are responsible for about 54 millions of the total increase registered. The remaining 71 millions are more equally divided among companies providing for the requirements of different classes of the community; but attention may be directed to the fact that considerable increases in endowment assurances are shown by the Sun, the National Provident, the Gresham, the United Kingdom Provident, and the Wesleyan and General, all offices which largely cater for persons of moderate means. The distribution of this form of assurance, therefore, as well as its actual growth, is on very satisfactory lines and clearly indicates the wise and increasing thrift of all classes.

THE
BRITISH EQUITABLE
ASSURANCE COMPANY, LTD.

WAS founded in 1854, and has therefore been in existence for over half a century. The Company transacts the following classes of business:—

1. LIFE ASSURANCE of every description, including the grant of Investment Policies securing guaranteed benefits.
2. INSURANCES for the REPLACEMENT OF CAPITAL on the expiry of a term certain.
3. FIRE INSURANCE.
4. BURGLARY INSURANCE.
5. DOMESTIC SERVANTS' INSURANCE.
6. PERSONAL ACCIDENT INSURANCE.
7. INSURANCE AGAINST SICKNESS.
8. WORKMEN'S COMPENSATION.
9. THIRD PARTY INSURANCE.

SECURITY.

The British Equitable offers Ample Security, namely:—

SUBSCRIBED CAPITAL (of which £34,500 has been paid up)	£300,000
LIFE ASSURANCE FUND	£1,559,544
FIRE, ACCIDENT AND GENERAL FUND	£45,763
EMPLOYERS' LIABILITY FUND	£2,511
REVENUE	£199,751
CLAIMS PAID	exceed £4,614,659

The Company will be pleased to quote Special Terms for all classes of Insurance and Investments.
Write for Free Copy of our fully explanatory Prospectus.

Head Office: 1, 2 & 3 QUEEN STREET PLACE, LONDON, E.C.

Branches at Birmingham, Bristol, Leeds, Liverpool, Manchester and Nottingham.

WHY TAKE RISKS

when an assured income at very liberal rates can be secured from a first-class

BRITISH COMPANY

by purchasing an Annuity with

THE

LEGAL & GENERAL

Life Assurance Society.

Head Office:

10 FLEET STREET, LONDON, E.C.

A STRONG PROPRIETARY OFFICE.

Established in 1836 and Valuing at 2½%.

CAPITAL, £1,000,000, fully subscribed, with £160,000 paid up and £840,000 uncalled.

Assets exceed £10,600,000.

The Society pays the Government Stamp Duty, and the Annuities can be paid in Half-yearly or Quarterly Instalments without extra charge.

SEND FOR TABLE OF REVISED RATES.

BENEFITS OF OFFICES COMPARED.

WHAT AN ANNUAL PAYMENT OF £10 WILL PRODUCE.

The great expansion during the last decade has been already set out and emphasised, but there is one point in connection with it which remains to be noticed. This is that the growth which has been and is still taking place has occurred in the face of the existence of considerable practical difficulties in the way of obtaining a policy on the most desirable terms. It is in large measure for the purpose of explaining and removing such difficulties that we annually deal so fully with every phase of life assurance, and furnish a large mass of varied data from which sound conclusions can be formed. We are glad also to recognise that the offices themselves are making increasing efforts to educate the public. Formerly it was too much the rule for prospectuses to contain little more than tabular matter and vague general statements, affording but little assistance to the inquiring novice, but nowadays such and kindred documents are much more attractive and informative. This is the more necessary because the difficulties of a would-be life assurer are very real and very complicated, even when he has got over the preliminary decision, and has wisely determined that life assurance is a profitable investment. These difficulties are enhanced by the fact, universally admitted by those who understand the matter, that the earlier a policy is taken out the better. This means in the majority of cases that an office has to be determined upon when business experience is limited, and consequently when the difficulty of making a wise choice is at its greatest. Then, too, the nature of a life assurance contract is not one which makes a strong appeal in an early period of life, when old age is regarded as belonging to an indefinite future, and when vague hopes predominate over sound apprehension of business principles. The benefits to be obtained are remote and contingent, while the outlay is immediate and continuous. It needs no small amount of resolution under such circumstances to undertake to pay a fixed sum for a long period, from which no benefit can be expected except in the distant future. Hence it generally happens that while the ideal time for beginning the life assurance is when a young person is earning an income amply sufficient for his immediate wants, and while he has no one dependent upon him, it is usually deferred until approaching marriage brings home to him new responsibilities. The former point is mostly reached among the middle classes at about the age of 25, while the usual age for marriage is not until about 30. Hence it is very desirable that policies should be taken out earlier than they are at present, because the annual charge which they involve will be thereby lessened. Moreover, it conduces to the early formation of habits of thrift, which for every year they are deferred become more difficult. We would therefore again urge, alike upon the public and upon the various offices, that economies might profitably be effected by antedating the average age at which policies are taken out. The latter especially might do much by organised effort to get into touch with younger people, through parents and employers. It would be well also if the two latter classes realised their responsibilities in this matter to a greater extent than they do at present. Though many large employers are increasingly encouraging thrift, particularly under the stringent conditions now existing, it would be easily possible for them to do more than they accomplish at present in the direction of pointing out the advantages of life assurance to the attention of those they employ, and in directing their attention to the most suitable offices. They might even in many cases secure agencies and, by deducting the commission from the premiums payable, not only lessen the annual cost to those in their service, but also do much to prevent policies lapsing through extravagance or carelessness, as so often happens, to the detriment of the assured. By pursuing such a course they would not only be studying the best interests of those for whom they are, at any rate to some extent, morally responsible, but furthering the efficiency of their business. Thrifty servants are for the most part more valuable than those who live from hand to mouth, if only because they are less free from the monetary worries which so often sap energy and perseverance.

Parents have an even greater incentive to use their power and influence in the same direction, but too often fail to do their duty in this respect. Apart altogether from the ordinary methods of saving for children and encouraging them to handle money wisely, there are now special methods of utilising assurance from a child's very early years. Many offices will now issue policies on the lives of children from birth onwards on terms which secure the repayment of premiums if death should occur during legal infancy, and which provide, further, for the continuance of the policy at the commencing low rate. Thus it is easily possible for almost every parent to insure his children on very low terms while he is responsible for them, and to hand over the policy to the beneficiary when he or she reaches years of discretion. This is an important encouragement of thrift.

We may now consider the question from the point of view of the person who has decided to take out a policy on his own account. Such an one finds the matter of considerable difficulty without a good deal of what may be described as expert assistance. He perhaps obtains prospectuses from the principal offices, only to find complications which, to his inexperienced mind, are most formidable. The first point which probably strikes him is that premiums differ; but if he points out this fact to the agent of an office which charges comparatively high rates, he is told, with perfect truth, that premium rates must not be considered alone, but taken in connection with expected bonuses. The latter vary greatly, not only in amount, but in the method of allotment; and thus further bewilderment ensues. Of course, financial strength is an important matter, but he finds great difficulty in determining which offices are sound and which are otherwise. Confused further with a mass of technical and unfamiliar detail, many find it impossible to reduce the claims of the different offices to a common denominator, and finally make a choice on the advice of a glib agent or from the experience of a private friend. Such a person will find this Supplement of considerable value. It applies a number of tests to the principal offices by means of a varied range of statistics.

The nature of this portion of the Supplement is indicated by the sub-heading, "What an Annual Payment of £10 will Produce," thus in a great measure furnishing a common denominator for the various offices. Before, however, giving details it is desirable to point out that a would-be assurer has the choice between a policy which is not entitled to any share in the profits, and one which will so participate. The former description is, of course, cheaper, but the latter is in the bulk of instances more remunerative in the long run. The share in the profits, when given, is in the form of bonuses, that is, a sum allocated either in the shape of an addition to the amount to be ultimately paid in cash or in the reduction of premiums.

It will conduce to a clearer understanding of the matter if we consider how premiums are fixed. They are divided into two parts: one of these is what is known as the net premium, or the annual sum actuarially calculated to cover the risks involved, on the basis of the mortality figures used. If that mortality proves more favourable than the figures indi-

cated, this net premium may be in itself a source of profit. In fixing it allowance is made for the probable amount of interest which the annual sum will earn during the currency of the policy, and if the actual sum so earned is beyond expectation, this is another source of profit.

The second element in the premium is that of loading, or an addition to the net sum made to cover expenses and contingencies. This loading is usually fixed upon a fairly liberal basis, so that, if the office is economically and wisely managed, a considerable portion of it ultimately emerges as profit. It will, therefore, be seen that great importance must be attached to the fact whether an office is economically managed or not. A rough but fairly trustworthy indication of economy is to be found in the proportion of the total income expended in running the business. It is true that such a test may be occasionally somewhat misleading, because an office doing a large amount of new business may legitimately spend a larger proportion of its income in expenses than one whose business is dwindling. On the whole, however, experience has proved that the expense ratio figures of an office are a good preliminary test of its soundness and desirability, and, therefore, the proportion that expenses bear to income is a matter demanding careful criticism. We devote a later section of this Supplement to showing such expenses in the case of every important office for a period of 10 years. Thus there is furnished an easy method not only of comparing the expansion or otherwise of any particular office with its competitors, but of understanding whether within the last decade the tendency has been in the direction of economy or otherwise. As regards interest earnings, the importance of which has been emphasised above, a succeeding section, headed "Valuation Returns," affords very important data. Careful comparisons are made with regard to each office of the rates of interest earned and assumed at the last two valuations, and the margins are in each case set out. It will be clear that the extent of this margin is an important element as regards bonuses; but it should be borne in mind that while a high rate of interest may conceivably be earned for a time by investment in doubtful securities, the ultimate result will not be favourable.

Such being the nature and use of bonuses, we now proceed to give a number of tables furnishing data by which the merits of individual offices may be tested from various points of view. As already pointed out, no single one of them is in itself conclusive, but taken in conjunction with each other they form a safe and satisfactory guide for a wise selection.

Clearly, the first point to be taken into account is that of the rate of premium charged. Premiums are, of course, a decisive factor so far as non-profit policies are concerned, for it may be safely assumed that practically every company in the following tables may be relied upon to pay the face value of every policy it issues. This may seem a bold assertion, but it is quite within the mark. By the system of valuation described later it is possible to ascertain with practically scientific accuracy the financial position of any organisation, and a consideration of that section will bring home to the minds of everybody that all the companies concerned are in a sound financial position. The variation in the premium rates for every class of life assurance can be eliminated for purposes of comparison by assuming in each case a fixed annual premium of £10, and it is on this basis that we deal with the results achieved by the various offices for whole-life policies without profits, for whole-life assurance with profits, and for endowment assurance.

We append below the premium rates charged by the different offices at the age of 30 for whole-life without profits, whole-life with profits, and endowment, the last-mentioned being payable at the age of 60.

PREMIUM RATES.—AGE NEXT BIRTHDAY, 30.

† Reduction of 10% in Temperance section.

WHOLE-LIFE ASSURANCE WITHOUT PROFITS.

This form of policy is the oldest and simplest which exists, and presents fewer difficulties to a would-be assurer than any other class of life assurance. Practically the only question to be considered is the rate of premium, as in point of fact all the offices may be regarded as certain to meet their liabilities when the death of the assurer occurs. We have worked out the figures with regard to all the leading companies on the basis of a fixed annual payment of £10 premium. It will be seen from the details below that the sum to be ultimately realised varies considerably according to the office selected, and the discrepancies are larger than is desirable in view of the fact that the risk in each case is the same. At the age of 30, for instance, the benefit ultimately to be secured varies from £470 to over £578. The explanation of this is to be found in the fact that formerly premium rates were much higher than is now necessary, owing to more favourable mortality, to cover the risk involved, and some offices are a great deal slower than others in reducing them to meet present conditions. Every year, however, reductions are being made which tend to popularise this form of assurance, which has perhaps been unduly neglected.

At the present time whole-life assurance without profits is chiefly effected where the maximum amount of protection at the outset is of primary importance, as is usually the case in connection with raising loans. It has, however, undoubted advantages under other conditions. Thus, for instance, a man whose income is at the moment limited, but whose responsibilities are heavy, can, by means of a policy of this description, ensure the maximum protection with the minimum payment. Thus a person with, say, an income of from £250 to £300 a year and several young children can generally manage to pay a sum of £10 per annum without difficulty for the sake of securing in case of his unexpected death a sum of £570, which might make all the difference to his dependents. Altogether we consider that without-profits policies have been unduly neglected in the past, and that now premiums are being reduced they will enjoy more favour. It is possible that one of the effects of the conditions created by the War will be to bring this form of life assurance into increased vogue. One significant development of recent years has been that many offices have found it advisable of late years to guarantee a particular rate of bonuses, and this form of policy is practically a without-profits one, though in a slightly disguised form.

* For policies of a minimum value of £500.
† Entitled to share in profits when premiums paid with 4 per cent. compound interest amount to sum assured.

WHOLE-LIFE ASSURANCE WITH PROFITS.

THE nature of this kind of policy is sufficiently obvious from its name. While it entitles the assured to a definite sum from the outset, it also carries with it contingent but, in most cases, important advantages. The holder of such a policy is entitled to share in the profits made by the company, and, of course, those profits in the future, particularly in the distant future, are necessarily uncertain, and are liable to fluctuation as current rates of interest decline or fall and as mortality experience is favourable or the reverse. Admitting, however, that there is an absence of fixity, it is important to realise two considerations which should always be present to the mind of a would-be assurer. One is that the profits of life-assurance offices are, over any lengthened period of years, mostly a very stable thing, and that their tendency is in the main in the direction of increase. Another is that even the best gilt-edged stocks are liable to considerable variations in market value. In less than two decades we have seen Consols depreciate nearly 50%, but during the same time assurance bonuses have, in most cases, been either constant or on the increase. The reason for this is that the interest earnings of the offices are derived from large accumulated funds, spread over varied investment fields and therefore yielding a more stable return. Investments and re-investments are constantly being made, and the leading officials are experts in such operations. During recent years, and particularly since the outbreak of the War, the comparative dearness of money has made it possible for the companies to obtain a higher rate of interest on new investments, but as the old investments at any particular time are in great preponderance, the average rate earned changes only slowly. Thus bonus prospects are now better than they were, say, 10 years ago, and the actual rates now being paid are likely to increase.

Historically bonuses are accidental in their origin, and are even now almost unknown in fire and accident business. They have arisen because the rates of premium originally fixed have proved in excess of what they require to cover the risks involved. It has been found, in the first place, that people have steadily tended to live longer on the average than was anticipated; that the cost of working expenses has been constantly reduced; and that the profits earned on the accumulated funds have become larger and larger. Hence it is customary even with proprietary offices to divide a very large portion of the profits for the benefit of policyholders, while in what are known as mutual offices they share among them the whole amount.

The way in which the profits of life assurance companies are arrived at is fully explained under the head of "Valuation Returns." Here we need only concern ourselves with the distribution of such profits when they have been determined. Bonuses take three forms: that of cash payments, of reduction of premiums, and of a fixed addition to the sum assured. As regards the first, that of cash payment, it has ceased to be of particular importance. The amount capable of being so divided is usually very small, especially when compared with the larger sum if payment is expected on a deferred basis. Reductions of premium have the advantage of diminishing the cost of a policy as time goes on, and perhaps wiping out the necessity of any payments at all when a fairly advanced age is reached. In theory this is a very sound method of distribution, inasmuch as the share of benefits is allocated according to the age of the policyholder, and the man who dies at 50 obtains considerably less benefit than one who lives until the age of 80. There are, indeed, two first-class offices which allot bonuses in no other form, on the ground that, while the third or reversionary method practically means reinsurance without further medical examination, and irrespective of the health of the policyholder when the benefit is fixed, by the plan of reducing premiums benefits are automatically and fairly adjusted. The third and most important method has been already alluded to. It is the reversionary—that of making a definite addition to the face value of the policy when it becomes payable, maintaining premiums in the meantime at the original rate. Taking all aspects of the case into consideration, this method is as advantageous to the public interest as it is popular, and results in a much larger sum being ultimately paid than would otherwise be the case. There are, however, a good many varieties even among reversionary bonuses. Some offices give a fixed addition to all policies which have been current for a certain period, while others give a different proportion according to the length of time during which the policy has been in force and according to the age of the holder. Some allot bonuses on the original face value of the policy, while others do so on the actual value at the time of allocation, including, that is to say, previous bonuses. It is, therefore, by no means a simple matter to institute an exact comparison between the different offices, but we have for many years adopted a method which will be found to afford a satisfactory guide for all

ordinary purposes, though we are aware it is not entirely free from theoretical objections. It is that of basing calculations on the rates of bonuses now being paid, the reasonable assumption, borne out by many years of experience, being that the offices as a whole will earn larger rather than smaller profits than they do at the present moment. In presenting figures based on this principle, and on the payment of an annual premium of £10, we get a fairly satisfactory indication of which offices are most attractive. We would guard ourselves from saying that these figures are a final test, and they should be taken in conjunction with the statistics given later under the heading "Valuation Returns." If this is done we think the choice of an office can without difficulty be made in a satisfactory way.

In explanation of the letters G and T appended to the figures of certain offices in the table below, we may add that those marked by these letters undertake and discriminate between abstainers and non-abstainers from alcoholic drink, either by paying a higher rate of bonus to the former or by charging them lower premiums. The advantages reaped by abstainers are most decided.

ENDOWMENT ASSURANCE WITH PROFITS.

We have already shown, both by aggregate figures and by statistics relating to individual offices, the extent to which endowment assurance has been steadily increasing in popularity for many years past. The great source of its attraction is that it combines two elements which had previously been regarded as quite distinct—that of covering a risk of early death and at the same time forming a means of provision for old age. The special feature of this class of policy is that it ensures payment either on reaching a certain age, or at death, should that occur before the age is reached. Though most offices issue policies of this description on a without-profit basis, the bulk of them are effected on a with-profit basis, and it is this kind of contract into which the investment element enters most decidedly. Mortality tables show clearly two important facts which are more and more grasped by the public at large. One of these is that early death is an exceptional occurrence, and tends to become less and less frequent as time goes on; the other, that provision for old age is of most serious importance. A method, therefore, which covers both contingencies has many advantages. When a man has passed 65 years, or at any rate 70, he may expect to find his earning capacity lessened in some way or another. At that period of life, however, responsibility for dependents has in most cases ceased, except in the case of wives. It is therefore a matter of the utmost importance that a man should have saved capital to supplement his earnings in later years, or even to provide him with an income should they altogether cease. By taking out an endowment policy this can be done to a very satisfactory extent. As shown in the table below, a man can, by the payment of £10 annually from the age of 30, insure at 65 a capital sum of over £630. Even people with quite moderate incomes can usually spare more than £10 a year for life assurance without serious inconvenience, and of course the ultimate benefits are proportionately increased the larger the annual payment. The sum so secured may save both the assurer and his friends considerable anxiety in old age, the former because he has adequate means for his support, and the latter because they are not called upon to assist an aged relative, perhaps for a lengthened period. Take, for example, the case of a man whose average income

between 30 and 60 has been, say, £500 a year, and who at the latter age finds his earning power failing or his health in a declining condition. Such a person, if reasonably prudent, is probably not wholly without independent resources. He may have an interest in the business in which he has spent his life, or he may be entitled to some form of pension for long and faithful service, or he probably owns his house or has some private resources. It is not an extravagant supposition that a man such as we have described would have an independent income of £100, apart from life assurance. To live on such a sum would be comparative poverty, such as would burden his declining years. If, however, since the age of 30 he has paid the sum of £30 a year in premiums—not an excessive proportion of the average income we have assumed—he would come at the age of 65 into possession of a capital sum of nearly £1,900. Such a sum could now be safely invested so as to yield an income of £100 a year, which would nearly double his income and make all the difference in the world between comfort and comparative poverty. Such a sum may, moreover, be utilised in other ways than that of pure investment. It may be employed to secure a share in a business where experience and judgment are required rather than labour, and it may, as we show later, be sunk in an annuity, which would yield an income quite adequate for all requirements, apart from all the anxiety connected with investments. Thus, while all forms of life assurance are very desirable and advantageous, that of endowment assurance is particularly so. A policy which covers not only the risk of early death, but also makes due provision for old age, gives a double incentive to thrift. It is sometimes urged that the object in view would, on the average, be better achieved by a person saving annually the sum set aside to premiums, and invest it for himself, on the ground that under such a plan a larger ultimate capital would result, and that meantime the savings would at any time be at his disposal. In point of fact, however, such a contention is unsound. Even if we ignore the element of protection against early death, there can be no doubt that private savings of the kind indicated would on the average yield much poorer results than an endowment policy. Apart from the compulsion of a contract, it needs more resolution than the ordinary man possesses to save a fixed sum annually. A man may set out with the firm intention of saving £30 a year, but in many years the task would not be accomplished, owing to the pressure of exceptional calls of various kinds. In the second place, even should the task be carried out in its entirety, it is extremely unlikely that the total resultant capital would be as large as that which would accrue from an endowment policy. To invest so small a sum as £30 a year to the best advantage is by no means easy, and there is the risk that, however prudent the choice of securities may be, they might depreciate in capital value, thus considerably reducing the total sum available at the age of 65. Investments require more capable and continuous watching than the ordinary busy man can give, and it is prudent in most cases to entrust them to those who make a special study of using them to the greatest advantage. It is for this reason that many wealthy men who have good opportunities of making investments on their own account prefer to take out endowment policies, and thus to save themselves trouble and risk.

In the table below we give the results likely to be obtained by taking out an endowment policy in various offices for an annual premium of £10, on the assumption that the bonus is maintained at the rate declared at the last valuation. The age taken is 30, and the results are shown at various ages of maturity, on the assumption that the holder lives out the full term.

THE LONDON ASSURANCE

IMMEDIATE ANNUITIES.

While life assurance is based upon the principle of making small numerous payments regularly for the sake of securing a considerable capital sum ultimately, its antithesis is found in the case of immediate annuities. A large capital outlay is made at the outset with the view of securing a fixed income during the remainder of life. The great objection usually felt to purchasing an annuity is that the purchaser may die at an early date, and so sink his capital without adequate return. As a matter of fact, however, annuitants as a rule get very full value, and so much is this the case that some offices are by no means anxious to undertake contracts of this description. Then, too, it is of course easily possible to obtain a medical opinion before entering into an annuity contract, and if that should indicate that life will not be prolonged, of course such a contract is undesirable. The advantages of immediate annuities are, however, great. The income derived from capital invested in this way is much larger than could be obtained from ordinary sources of investment, while at the same time it is quite secure. It will be seen from the table given below that a man at the age of 60 can get an annual return of 9 per cent. or more without risk. As the expectation of life at that age is about 14 years, if the annuitant lives out the average period he will have received about 36 per cent. more than the sum originally paid. The additional income which an annuity affords may be a very important matter. A man, say at the age of 65, has an available capital of £2,000. By investing this in the ordinary way he can only get a return of from £80 to £100, but if he sink the sum in an annuity he can count on an income of £180 as long as he lives.

The taking out of an annuity on the maturing of an endowment policy may be of very great value to many, as it enables comparatively small payments during the actual working period of life to provide a satisfactory income for old age. Thus, in the case of a man receiving payment of an endowment policy at 65, amounting, with bonus additions, to a capital sum of £2,000, he could by the purchase then of an annuity secure an income for the rest of his life of £180 a year. Presuming, further, that such a man had been for the greater part of his life in possession of an income of from £500 to £600 a year, he would thus secure permanent provision of a fairly adequate character, bearing in mind the fact that his expenses would in the ordinary course of events be materially reduced.

We give below the rates for both male and female lives, those granted on the latter being rather less, owing to the greater longevity of women. It is also possible for an elderly couple to secure a joint annuity payable as long as either party is alive, but for this it is necessary to obtain special rates varying with the ages of both parties.

Scottish Temperance

Life Assurance Co., Ltd.

ABSTAINERS' SECTION with specially reduced rates. Policies issued providing for Sickness, Accident, Death, or Old Age.

BONUSES HANDSOME,
EXPENSES MODERATE,
MORTALITY FAVOURABLE.

DEFERRED ANNUITIES.

Besides issuing immediate annuities, the conditions and value of which have been already explained, most companies also issue deferred annuities. These do not involve the payment of a fixed capital sum at a particular moment, but an income is provided by means of a yearly premium, to be paid until reaching a certain age, when the annuity comes into force. This is rather a special kind of provision, appealing only to a limited class, though one more numerous than is sometimes supposed. There are not a few who have the prospect of finding themselves during the closing years of life to have outlived the possibility of earning, without having been able to save enough by ordinary methods to provide an income and without having any persons dependent upon them. To women earning their own living deferred annuities should particularly appeal. As a class their ability to save is not great, and when they come to face old age they often do so in very disadvantageous circumstances. By means of a deferred annuity, however, they can secure a permanent income for old age, and in many cases their friends would assist them in so doing. Some men are in a similar position. A deferred annuity of £100 payable on reaching the age of 65 can be obtained for a sum not very large even in relation to a comparatively limited income. Those who know the numbers of cases of elderly persons stranded without possible means of subsistence are aware how important it is that the advantages of deferred annuities should be better realised than they are now.

We give the figures, so far as we have been able to ascertain them, of the terms on which offices will grant deferred annuities. It will be seen that the variations in annual cost are considerable, not merely between the different offices, but according as to whether the premium is returned in the event of death before the annuity may become due. In the case of such persons as we have been considering, it would probably in most instances be better to pay the lower rate and run the risk of death before the age is reached, as this class of the population is usually without dependents, and the premiums, if returned, would practically go to outsiders.

In the following table we give the rates for both male and female lives, assuming the age of entry to be 30, and an annuity of £100 to be paid on reaching the ages of 55, 60, and 65 respectively. We append particulars also as to whether any return of premium is made in the event of death occurring prior to these ages. The difference in rates is so considerable that care should be exercised as to the company selected, though we think we are right in saying any company in the list is sure to fulfil any deferred annuity contract into which it enters.

Male Lives. Age at Entry 30.	Yearly Premium to secure an Annuity of £100 on reaching Age of- 55			60			65

No. 114 CHANCERY LANE, LONDON, W.C.

Fire. Personal Accident and Disease. Burglary. Fidelity Guarantee.
Workmen's Compensation, including Domestic Servants.
Property Owners' Indemnity. Third Party. Plate Glass.

SECURITY UNSURPASSED.

Every facility is afforded for the transaction of Insurance business on the most favourable terms, and Surveys where necessary are undertaken by the Society free of charge. Prospectuses and Proposal Forms and full information may be had at the Society's Office.

Applications for Agencies Invited.

ECONOMICAL OFFICES.

A good guide, and one of the best, as to the results which may be secured from individual offices is obtained from a comparison of their working costs. The office which is able to work at the lower cost should, other things being equal, be able to give the better results to the assurant. There are, however, other considerations to be taken into account in contrasting one company with another. These we endeavour to furnish in the comparisons previously given, and in the subsequent description of each individual office, as well as in our weekly "Insurance Notes," in which we deal in detail with each office. Still, among the best guides to the selection of an office is the proportion of premium income it pays away for commission and management. Consequently we present herewith a series of tables in which the various offices are classified according to the percentage of their expenses of management and commission to premium income. In the first table are offices absorbing less than 10 per cent. of their premium income for expenses and commission. Several in this group pay no commission, and at the same time work very economically; hence their extremely low ratio. In the second table are the offices whose proportions of expenses to premium income range from 10 to 15 per cent.; the third comprises those with proportions of from 15 to 20 per cent.; the fourth, those "ordinary" companies with ratios about 20 per cent.; and the fifth is devoted to industrial companies, whose ratios are necessarily high in consequence of the weekly collection of premiums.

We would point out that the expenses of management and commission include the expenditure connected with the annuity business, and this causes the rates of the offices which conduct annuity business to be higher than they otherwise would be. We show, however, the considerations received by the offices for annuities, so that allowance may be made for this disturbing factor. The expenditure in connection with annuity business is very small, and does not appreciably affect the proportion of expenses of management and commission to the premium income.

As an instance of how small are the expenses connected with annuity business, we would point out that the North British and Mercantile, which is shown in the table to have received £188,677 for annuities, incurred an expenditure in respect of its annuity business of only £5,696. Eliminating the expenditure in connection with the annuity business of this office, the ratio of expenses and commision to premium income would be about 14.5 per cent., instead of 15 per cent.

To indicate the average proportion of expenses and commission to premium income of the whole of the companies we set out below the income received by the whole of the "ordinary" companies from interest and from premiums, together with the expenses and commission and the ratios of expenses to premium income, in each year since 1905, in 1895, and in 1885:—

"Ordinary" Companies.

Year.	No. of Offices.	Interest. £	Premiums. £	Expenses and Commission. £	Ratio of Expenses to Premium Income. %
1915	81	15,208,783	32,313,620	4,196,383	12.99
1914	32	14,916,467	31,501,687	4,338,484	13·77
1913	82	14,221,215	30,396,899	3,961,774	13·03
1912	81	13,670,729	29,703,217	3,960,307	13·33
1911	80	13,153,592	28,977,525	3,903,289	13·47
1910	81	12,640,057	28,313,415	3,844,961	13·58
1909	32	12,288,039	27,408,478	3,677,972	13·42
1908	81	11,861,220	26,862,882	3,604,741	13·42
1907	82	11,349,052	26,014,232	3,633,101	13·96
1906	86	10,860,172	25,332 993	3,431,931	13·54
1905	26	10,456,303	24,547,873	3,313,305	13·49
1895	85	7,393,739	17,637,683	2,584,635	14·65
1885	95	5,918,058	12,555,797	1,775,126	14·13

The high average expenses of the "industrial" offices will be apparent from the following contrast:—

"Industrial" Companies.

Year.	No. of Offices.	Interest. £	Premiums. £	Expenses and Commission. £	Ratio of Expenses to Premium Income. %
1915	19	2,116,794	17,973,981	7,939,006	44·44
1914	19	2,025 049	17,328,255	7,975,582	46·02
1913	18	1,849,061	16,690,937	7,330.005	43·91
1912	18	1,716,876	16,277,509	7,062.437	43·39
1911	16	1,612,457	15.741,053	6,925,247	43·99
1910	15	1,503,372	15 215,860	6 644,137	43·66

VALUATION RETURNS.

In the case of a life assurance office, as in all other businesses, it is necessary to have a periodical and rigorous stocktaking. Owing to the nature of life assurance, however, it has to be conducted on somewhat different lines from those usual in the case of an ordinary commercial enterprise. To draw up a balance sheet and profit and loss account for an undertaking of the latter class it is a matter of comparatively little difficulty as regards ascertaining the approximate liabilities. Assets are a more uncertain element, and on their being valued rigorously or loosely the value of the ultimate figures largely depends. All this is reversed in the case of a life office. There the assets mostly consist of investments of various kinds, able for the most part to be valued without difficulty, especially so far as they consist of marketable securities. Liabilities, on the other hand, present a somewhat complex problem. Most of them are not fixed, but contingent, and it is impossible to foresee with mathematical accuracy how soon any liability will mature. Hence the stocktaking of a life assurance office properly becomes a valuation. As ordinarily used, the word valuation stands for little more than a mere opinion, which is valuable or not according to the experience and character of the person expressing it. In the case of life assurance, however, the term is used for a computation of liabilities on fixed and scientific principles, which admit of examination and criticism by competent persons.

It will be readily understood that the complexity of this method of stocktaking renders it difficult to conduct it annually, and the ordinary period elapsing between each investigation is five years. The principle on which the examination is conducted is that every policy in force means an annual payment to the office for a period more or less uncertain, and a liability on the part of the company to provide a fixed sum at the end of a period also indeterminate. To deal with this difficulty the law of averages is called into play, and this proves a perfectly satisfactory guide. It is impossible for anyone to say when a particular individual at a given age will die, but the data furnished by long experience shows that if a thousand policies are granted to persons of that age, a perfectly definite percentage will die in each succeeding year. On this basis it becomes possible to calculate with practical accuracy what average amount of premium is likely to be received on each policy in force, and when the ultimate liabilities upon them will fall due. Whether a particular policy will rank as a liability or an asset depends upon circumstances, and also upon the fact of whether the premiums likely to be received are more or less than the present value of the ultimate sum payable. Thus, for instance, if the company has reason to expect to receive £100 a year in the shape of premium for 35 years upon a given policy, and its expected liabilities under that policy are only £3,000, the balance represents an asset. Further, there is the important point of interest earnings. Over a long period compound interest amounts to a very considerable sum, and it is therefore important to estimate what the earnings are likely to be during the continuance of the policy. Of course in this matter, as in regard to the question of mortality, there is no absolute certainty, as the earning power of money varies greatly from time to time, and to a degree which cannot be foreseen long ahead. This difficulty, however, is obviated for practical purposes by assuming a rate of future interest somewhat below the average actually being earned, or what has been realised in the recent past, and it therefore becomes of very great importance, with regard to the continued stability of any company, that the rate of interest assumed should be well below that actually earned. Reference to the tables below will show that, on the average, the margin thus indicated is a very considerable one. While the assumed rate of interest is mostly about 3 per cent., the actual earnings at the present time are somewhere about 4¼ per cent., so that very adequate provision is made for future periods of cheap money. Indeed, it is now averred in actuarial circles that the reduction in the assumed rate of interest of money by some of the best companies some 20 years ago, from 3 to 2½ per cent., erred on the side of undue caution.

How important this margin between interest assumed and earned is, as regards profits, may be seen from some interesting figures published last year. As a rule the offices are not in the habit of giving an analysis of the sources from which they derive their profits, and the following figures are, therefore, of particular interest, especially as they relate to a company of high standing, doing a considerable business, and whose actual interest earnings were about 1½ per cent. above the rate assumed. The figures given show that of the total profits made in the previous quinquennium over 60 per cent. accrued from the access of interest earned over that assumed. and over 25 per cent. from favourable mortality, the remainder being mainly due to profit on loading, which, as previously explained, is the portion of the premium added to cover working expenses.

The information required by law with regard to valuations is of such a character that it is easily possible for those familiar with the matter to determine whether in any particular case the basis is sound or otherwise, and this forms a very important, though indirect, check upon unsound business.

In the tables below we deal with the valuation returns of each company in some detail, and the figures merit very careful examination, especially from the point of view of bonus prospects. It will readily be seen that it is important not merely to know what the results of the last valuation were, but how far those results contrast with those obtained at the previous valuation; whether the estimated rate of interest is stationary, has increased or decreased; and also whether the margin between the estimated and actual rate is less or more. In the large table below the companies are necessarily clasified, as will be understood from what has already been said, according to the date of valuation. From the bonus point of view the more important figures are those relating to interest, and, when considering the probability of the present rate of bonus being maintained or increased, it should be ascertained beforehand whether the rate of interest assumed leaves a good margin below that actually earned, and whether the tendency of the interest earned is in an upward or downward direction. It will be seen that in almost every case there is a very adequate margin, and that, therefore, profits are rather under- than over-valued. The rate of interest lately has tended in an upward direction, though in some cases the effect of this on bonus distribution has been counterbalanced by the necessity of making provision for depreciation in capital value. It has to be remembered, however, that such depreciation in no way interferes with actual interest earnings. If, for example, a first-class security yielding 3 per cent., and originally bought at "par," has lately fallen to 75 per cent. owing to the greater value of money, and the difference of £25 has been written off, the income derived from it has remained unchanged, and the only absolute difference is that that security now appears in the Company's books at the lower figure and shows a nominal yield of 4 per cent. whereas formerly it gave a return of 3 per cent. It will be seen that with few exceptions bonuses are well maintained, and if there was space to consider these exceptions in detail it could usually be shown that special causes have been at work. In many cases bonuses show increases, and the probability is that this tendency will continue. Percentages of

interest margin year by year would be misleading, inasmuch as the companies valuing any particular year do not as a rule value again until five years later; but the following table, which is a summary of the more detailed figures, will be of value as showing that the margin of interest earned over interest assumed is now decidedly over 1 per cent.:—

Last Valuation Year.	No of Companies.	Interest Assumed. Last Valuation.	Interest Assumed. Previous Valuation.	Interest Earned. Last Valuation.	Interest Earned. Previous Valuation.	Margin. Last Valuation.	Margin. Previous Valuation.	Margin. Inc. or Dec.
1910 ...	17	3·00	3·01	4·23	3·98	1·23	0·97	+0·6
1911 ...	9	2·81	2·81	4·10	4·01	1·31	1·20	+0·11
1912 ..	11	3·02	3·05	4·12	3·96	1·10	0·91	+0·19
191 ...	12	3·03	3·03	4·13	3·90	1·10	0·87	+0·23
1914 ...	13	3·02	2·98	4·33	4·05	1·31	1·07	+0·24

One other matter needs explanation in connection with the figures below. It will be seen that the bonuses of certain offices are described as compound, and the meaning of this term may to some be obscure. The ordinary or simple bonus is one declared on the face value of the policy only. Compound bonuses are those payable on the total value of the policy at the date of valuation—including, that is, previous bonuses. Where a policy has been in existence for a long time the difference in the amount ultimately payable is considerable, as will be seen from the following table:—

Policy of £1,000, assuming Quinquennial Bonus at the Rate of £2 per Cent. per Annum.

Value of Policy after	Simple. £	Compound. £
Five years	1,100	1,100
Ten years	1,200	1,210
Fifteen years	1,300	1,331
Twenty years...	1,400	1,454
Twenty-five years	1,500	1,610
Thirty years	1,600	1,771

FIRE INSURANCE.

In some respects fire insurance presents very different conditions from life assurance. While all policies of the latter class are for long and indeterminate periods, and their terms depend upon the age and health of the assurant, fire policies are for fixed and mostly short periods—usually a year—and are wholly independent of the personality of the persons to whom they are granted. Further, profit distributed by means of bonuses, which, as we have seen, play a very important part in life assurance, is quite a negligible quantity as regards fire policies; while the premiums of the most important fire offices are the same for each description of risk, but vary according to the class of risk undertaken, their amount being fixed, so far as the tariff itself is concerned, which includes most leading companies, on the basis of combined experience.

Necessarily, risks vary considerably. It is obvious, on a moment's reflection, that a fire in a dwelling-house is a comparatively rare event, but that in a building devoted to the manufacture of explosives it is by no means uncommon; while, further, assuming a conflagration in each kind of building, the resultant damage in the case of the former is likely to be much less than in the case of the latter. Moreover, the charge for any particular kind of risk varies from time to time, according as conditions change which tend to increase it or diminish it. Thus, for instance, the replacing of buildings largely erected of wood with those constructed of fireproof material necessarily alters the rate of premium. Though particular rates alter greatly from time to time, it can safely be said that in most instances the fire offices fix their premiums very justly, because it is their interest to steer a happy medium between unremunerative rates and those which are so high as to cause a diminution in business.

As regards investigation of financial position, there is no method available in connection with fire insurance which corresponds to the life valuations already explained; but it is a pretty safe rule to adopt in regard to this matter that if the funds, exclusive of capital, amount to as much as a year's premium income the undertaking is thoroughly sound. On the average, the claims do not amount to above 50 or 60 per cent. of the premium income; and if, therefore, a company has one year's premium income in hand in the shape of accumulated funds, it is in a position to pay from three to four times the average amount of capital without calling up latent resources in the shape of reserve capital, though, as will be seen from the table below, those latent resources are usually large. As showing the strength of the fire offices, the experience of the San Francisco disaster in 1906 may be recalled. Heavy and unexpected claims were then incurred, but only in a few instances were companies unable to meet them without summoning latent resources. Further, the broad effect of this disaster during the last 10 years has been practically negligible. As will be seen from the table below, the percentage of accumulated funds to premium income is almost as large in 1914 as it was in 1904.

We give a table which sets out in detail the standing of the leading offices at the end of last year, as compared with 10 years previously. It gives first the capital issued, the amount paid up, and that reserved at the end of 1914, the latter column being important as showing the large amount available to meet claims in very exceptional circumstances. The next two columns give the accumulated funds, exclusive of capital, at the end of 1914 and 1904 respectively, with

FINANCIAL STRENGTH OF THE FIRE OFFICES (000's omitted).

the actual and proportionate increase during the past 10 years. Next follow columns comparing the premium incomes on the same basis, and, finally, columns indicating the proportion of the funds to premium income. Broadly speaking, the position is very strong, and nearly all the companies mentioned in the table are in a strong position to meet even an exceptional run of claims without serious difficulty.

TRADING RESULTS OF THE FIRE OFFICES.

In order to show the result of the operations of various companies, their amount of interest earnings, and their dividends, we give details below relating to the past five years. This has been on the whole a favourable period, and many of the companies have been able to increase their rate of distribution to the shareholders, while at the same time strengthening their financial position. We take a five years' period as affording a fair average. In the first column we give the trading surplus or deficiency, which is arrived at by deducting from the year's premium income all claims and expenses, and also an allowance of 33⅓ per cent. of the additional premium income to cover unexpired risks at the end of the year, either owing to some policies being taken out so as not to run concurrently with the calendar year, or because they have been effected for a longer period than one year. Interest earnings on the accumulated funds are next shown, and the large proportion which some of them bear to the trading surplus is a matter of great importance as regards the financial stability. Where, for instance, as not infrequently happens, interest earnings are as much as two-thirds of the average trading surplus, the ability to meet unforeseen occurrences without depleting capital reserves will be seen to be very considerable. We next show the rate of dividend paid by each office and the sum required to provide that percentage, arriving finally at the surplus or deficiency in either year after dividends have been distributed. The figures in the last column show for each year the additions to, or, in some rare cases, the deductions from, the funds previously accumulated.

ACCIDENT AND MISCELLANEOUS INSURANCE.

THE different classes of business, now very numerous, which fall under this head are of comparatively recent origin, and date back only about three-quarters of a century, to the time when the risks incurred by travellers on what were then the new-fangled railways assumed prominence in the public mind. More recently, and especiallly during the past 25 years, many new branches have sprung up, including those connected with employers' liability, workmen's compensation, burglary and motor risks. The latest development, though in this case the liability is assumed by the Government, and not by the offices, is insurance against risks from Zeppelin raids, which are not covered by the ordinary fire or accident policies.

We give a summary table, framed on the same lines as that relating to the fire companies, showing the position of the leading offices in 1914 as compared with 10 years previously. It will be seen that many of the fire and life companies now do accident business, and the tendency in this direction is steadily growing. This, of course, means increased stability, as not only individual but groups of risks are thereby averaged. The broad result shown by the Table is that funds are increasing at a considerably more rapid rate than premium incomes. As accident is a much newer development than fire insurance, the offices concerned in this branch are not in quite so strong a position as the fire companies. The percentage, however, of their funds to premium income shows a steadily rising tendency, while policyholders have in many cases the further protection of dealing with large companies, transacting business on such a scale that that concerning accident constitutes a minor branch.

TRADING RESULTS OF ACCIDENT OFFICES.

We have obtained particulars, similar to those furnished with regard to fire insurance, showing the results achieved by various leading accident offices during the past five years, a period which has marked considerable development in business in connection with the Workmen's Compensation Act. With some exceptions business was more profitable in 1914 than in 1913 owing to various causes. Of course the War was only in progress during a portion of last year, but its effect was not really injurious. The amount of business lost in enemy countries was small, while more was done at home. Workmen's compensation premiums were more remunerative than in previous years, and expansion took place in the burglary and fidelity branches.

It will be seen that many of the companies are able to provide the whole or a large part of their dividends out of interest earnings, while the rate of shareholders' remuneration tends on the whole steadily to increase.

MARINE INSURANCE.

THE War necessarily had an important effect upon marine insurance business during the closing months of 1914, but the result on profits was by no means detrimental. For one thing rates rose to a more remunerative level, which seems to have more than compensated for the extra risks involved, which, thanks to the vigilance of the Navy, were not so serious as might have been expected. Even the temporary operations of the *Emden* were by no means serious. The effect of the War on marine business this year has still to be revealed, but as rates have again had a downward tendency, profits may suffer somewhat. Apart from war risks the 1914 experience was on the whole favourable.

Apart altogether from inevitable fluctuations in the yearly results, most of the leading offices occupy so strong a financial position that they can pay their dividends largely or wholly out of interest earnings. The large table below contrasts the position of offices in 1914 with that in 1904 on the same lines as that adopted in connection with fire and accident insurance. While some relative depletion of funds have occurred during the last decade, their proportion to premium income is still very high and affords very ample protection to policyholders.

PROFITS OF THE MARINE COMPANIES.

The accounts of marine offices are at first sight rather complicated and confusing. Risks of this character are as a rule undertaken on the basis of a voyage or series of voyages rather than for any fixed period, and this is the reason of the practice, which many companies follow, of placing a considerable sum to suspense account at the end of each year, to provide for indeterminate risks outstanding, and to deal fully with the actual profit and loss of any particular year only some time after it has expired. We adopt, however, for the purpose of the detailed summary, a simpler method, arriving at the trading surplus or deficiency by deducting from the premium income all losses and expenses paid during the year in question, whether they were actually incurred during that year or not, also allowing for any allocation to suspense account necessary to wind up the account for the previous years. By this method the profit and loss account for any given year may be larger or smaller than it ultimately works out, but the average for a period of five years is sufficiently trustworthy.

INSURANCE SHARES AS INVESTMENTS.

THE previous contents of this Supplement afford ample materials for judging not merely as to the attractions which insurance shares generally offer to investors, but what the position of any particular company is from this point of view. Speaking broadly, the particulars of various kinds make it clear that companies transacting all classes of business are thoroughly sound financially, while as regards individual concerns the fullest data are afforded for forming a critical judgment. Purely life offices are showing steady expansion and have increasing resources, while their funds are now employed very profitably. The necessity for providing for capital depreciation is the only adverse factor, and even this is not likely to affect dividend distributions, except in special cases. Fire companies have very large resources, and their business is conducted on such lines that the shareholders are likely to receive increased benefits in the future. Accident undertakings have for some years past been steadily improving their position, and have shown great ability to meet new conditions in a way satisfactory both to policy and share holders. Marine companies, whose profits necessarily fluctuate from year to year, are in many cases able to provide the present rates of dividend wholly out of interest earnings; and the increasing number of offices transacting all classes of business are able to show steady general progress. Hence the detailed figures given on the next page deserve the careful attention of all those desirous of at once securing safety, good yields, and increasing remuneration in the future.

The table contains, first of all, the amount of capital, both subscribed and paid up, and then the nominal value per share, with the amount paid up thereupon. The uncalled liability may appear large, but it is really for the most part nominal, and on no occasion for many years have calls been other than very infrequent. Then follow the rates of dividend for the last eight years, which in many cases have shown a decided upward tendency, and approximate present prices and yields. As regards share quotations, the fact that the market is in most cases, and particularly at the present time, a somewhat narrow one renders any figures which can be given no absolute guide as to the terms on which purchases or sales can be effected, as a pressure, either of buyers or sellers, may cause considerable fluctuations. In calculating the yields, allowance has been made for accrued dividends, and also for the full deduction of the present rate of income tax, an important allowance as matters stand at present.

A matter worthy of careful attention from the investment standpoint is the remarkable steadiness of insurance share values. For a long time past securities generally have been steadily depreciating, and during the past eight and a-half years Consols have fallen from 84 to 58½, but insurance shares have varied remarkably little, and in not a few cases have actually appreciated. The following figures are noteworthy in this connection:—

	Share Paid up	Price, July 1907	Price, Dec. 1915
Atlas...	1	5½	6½
Clerical, Medical and General ...	2½	18¾	20½
Equity and Law	5	22	24½
Legal and General	5	16½	17½
Merchants' Marine	2½	2⅞	3⅞

† Includes proportion of quinquennial bonus.

‡ Yield allowing for accrued dividend, and subject to income tax at 6*d.* in the £ in all cases.

(*a*) *Gresham*: In arriving at these yields account has been taken of the quinquennial life bonus of 31*s.* 6*d.* paid May 1911.

(*b*, *c*, *d*) *Marine Insurance*: (*b*) Div. *free* of income tax on shares £4 10*s.* paid. (*c*) In Aug. 1911 div. of £10 10*s.*, *free* of tax, paid out of reserve fund and applied to meet a call of same amount. (*d*) Div. *less* income tax on shares £15 paid.

(*dd*) *Prudential*: Yield on div. of 55 % paid in 1915.

(*e*, *f*, *g*) *Sea*: (*e*) Dividend on shares £2 paid. (*f*) In 1912 a bonus of £8 per share was paid. (*g*) Dividend on shares £10 paid.

(*h*, *i*, *j*) *Star*: (*h*) Dividend on shares 25*s.* paid. (*i*) In addition a bonus of £6 13*s.* 6*d.* per share was paid in 1909. (*j*) Dividend on shares 1*s.* paid. Beyond dividend of 2*s.* per share (200 per cent.), shareholders expect to participate in quinquennial bonus.

(*k*, *l*, *m*, *n*) *Sun*: (*k*) Dividend on shares with 10*s.* paid. (*l*) In addition a bicentenary bonus of 100 per cent. was paid. (*m*) Dividend on shares with £1 paid. (*n*) Dividend on shares with £2 paid.

(*o*, *p*) *Sun Life*: (*o*) In addition scrip div. of 2½%. (*p*) Div. on shares fully paid. Former divs. on shares £7 10*s.* paid.

(*q*) *Royal Exchange*: Interim div. raised 1% to 9%, less tax. Yield on basis of div. of 10½% paid for year to June 1915.

INDIVIDUAL COMPANIES DESCRIBED.

NOTE.—*Prices of shares and yields are given as approximate estimates on basis of recent quotations, allowance being made in yield for accrued interest, and tax being added to dividends at 3s. 6d. in £1 on gross amount, where dividends are declared free of income tax, in computation of yield.*

ABSTAINERS AND GENERAL INSURANCE CO., LTD.

Head Office: 142 Edmund Street, Birmingham; London Office, Craven House, Kingsway, W.C. Founded as the "Blue Ribbon Life, Accident, Mutual and Industrial Insurance Company, Limited," in 1883; name changed in 1890. Capital authorised, £203,125; subscribed December 31, 1914, £97,500; paid up, £22,500, in 120,000 shares of 16*s.* 3*d.* each with 3*s.* 9*d.* paid. A dividend is payable December 31, 1915, at the rate of 8 per cent., as in the previous year.

Transacts life and industrial business, and also fire, accident, and general insurance, a department for these descriptions having been opened in November 1907. In life department premium rates are considerably below the average. The triennial valuation at close of 1912 was made on a net 3 per cent. interest basis by the O^M Mortality Table, and the net interest yield on the life fund in 1914 seems to have been about £3 15*s.* 1*d.* per cent. Bonuses to participating policyholders, triennium to 1912, 21*s.* per cent. per annum, these bonuses vesting in case of new policies in second calendar year. Net new sums assured in 1914, £286,437. Life premium income, 1914, £111,507. Expenses about 19·9 per cent. Death claims, 1914, £15,811; incidence of mortality has been consistently very favourable. Life assurance fund at close of 1914, £804,556. Industrial premium income, £4,851. Industrial fund, £47,969. Fire premiums, £3,212. Fire fund, £8,294. Accident premiums, £320; Accident fund, £1,131. General premiums, £835; General fund, £813. Leasehold redemption premiums, £249; fund, £2,778. Total assets, December 31, 1914, £919,918. List of investments is given, and auditors report that investments in Stock Exchange securities are taken at or less than figures shown in valuation balance sheet on December 31, 1912, or at cost or less where acquired since that date. Establishment expenses for £9,000 are classed amongst assets.

ALLIANCE ASSURANCE COMPANY, LIMITED.

Head Office: Bartholomew Lane, London, E.C. Established 1824. Acquired undertakings of Imperial Insurance Company, Limited, and Imperial Life Insurance Company in 1902, of the Alliance Marine and General Assurance Company in 1905, of the Westminster Fire, County Fire, and Provident Life offices in 1906, the Law Fire Insurance Society in 1907, and the Economic Life Assurance Society in 1911. Capital authorised and subscribed, £5,450,000, and paid up, £1,000,000, in 250,000 original shares of £20 each with £2 4*s.* paid and 450,000 new shares of £1 each fully paid. Both denominations of shares, irrespective of the difference between the amount from time to time paid or credited thereon, carry equal rights to dividend and to participation in assets on a winding up. The shareholders are entitled to one-fifth of the divisible surplus at quinquennial valuations of the Alliance life fund. This is a larger proportion than usual. On the other hand, life policyholders are very liberally treated in other respects; for example, their department is managed at a cost of not more than 10 per cent. of the premiums.

In respect of the years 1910–14 inclusive, dividends have been declared at the rate of 12*s.* per share per annum, less income tax. Price of partly paid shares, £9; yield, £6 17*s.* per cent. Price of fully paid shares, £10 15*s.*; yield, £5 14*s.* 3*d.* per cent. The Company is strong, influential, and excellently managed.

FIRE DEPARTMENT.—The loss ratio in each of the 10 years preceding 1906 was very moderate, lying between 43 and 56 per cent. of the premiums. In 1906 the ordinary losses were under 45 per cent., but there were also heavy losses, amounting to £466,342, paid or provided for in connection with the San Francisco conflagration and earthquakes on the Pacific coast of America. In 1907, 1908 and 1909 the loss ratio was under 43 per cent., in 1910 under 39 per cent., in 1911, 47¼ per cent., in 1912 under 36 per cent., and in 1913 and 1914 about 43 per cent. In 1914 the premiums, increased by £13,245, amounted to £1,360,874; losses and charges in connection therewith, including contributions to fire brigades, to £585,812; and expenses, inclusive of commission, to £513,405 (37.7 per cent.). The surplus on trading amounted to £261,657, while the net interest earnings credited to this department were £84,784, and after transfer of these sums (£5,298 being added to reserve for unexpired risks) to profit and loss account the fire fund on December 31, 1914, amounted to £2,121,357, this representing about 156 per cent. of the year's premium income, or about four times the amount usually set aside in a fire office as a specific provision for unexpired risks.

LIFE DEPARTMENT.—In 1914 in this department the net new sums assured amounted to £1,440,424; the total net premium income to £1,173,135, of which expenses absorbed £115,901, or about 9·9 per cent.; claims by death £1,035,293, and by survivance £191,157; and life assurance funds at close of year to £16,706,112. The net interest yield on these funds seems to have been about £4 0*s.* 8*d.* per cent. These figures are inclusive of those of the Imperial Life, Provident Life, and Economic funds. The annuity fund at close of 1914 amounted to £1,548,006, a sum of £81,928 having been received as consideration for new annuities.

The quinquennial valuation at close of 1913 (excluding Imperial and Provident policies) was made for assurances on a strong basis: O_M Mortality Table, net premiums, and 3 per cent. interest, with additional reserves for various purposes. The total divisible profit was £839,951, and the policyholders' share gave bonuses on Alliance "New Series" participating policies at the excellent "compound" rate of 30*s.* per cent. per annum. The surplus on December 31, 1913, in the Economic fund enabled the directors to allot a compound reversionary bonus of 27*s.* per cent. per annum. A valuation of the Imperial Life fund on January 31, 1911, disclosed a profit over preceding quinquennium of £313,359, of which £215,818 was treated as divisible profit, and of that amount the Alliance shareholders' proportion was £40,000, which was carried to the profit and loss account for 1911. Imperial securities were written down in that year by £12,939. The quinquennial valuation of the Provident Life fund at December 31, 1912, showed a surplus of £320,924, of which £11,602 was carried to the Alliance profit and loss account as the shareholders' proportion, the balance being divisible amongst the Provident participating policyholders. Provident securities were written down at the valuation by £54,241.

LEASEHOLD, &C., DEPARTMENT.—The fund in this department amounted on December 31, 1914, to £821,432. Premiums in 1914, £82,167.

MARINE DEPARTMENT.—The marine insurance premiums in 1914 amounted to £290,064, and the marine fund at end of year to £466,584. The marine underwriting surplus was £70,744, which was carried to profit and loss account, together with interest earnings on the marine fund amounting to £20,544.

ACCIDENT DEPARTMENT.—This department for personal accident (including workmen's compensation) and burglary insurance business was opened in 1907 The personal accident premium income in 1914 amounted to £10,996, and the personal accident fund on December 31, 1914, to £19,041. Employers' liability premiums on business transacted within the United Kingdom amounted to £126,916, and the relative fund at end of year, including £57,218 in respect of outstanding claims, to £282,012. Miscellaneous insurance premiums amounted to £68,439, and the relative fund to £184,606.

The general account showed receipts of £14,996 and a fund of £99,346.

GENERALLY.—After providing for dividend rates mentioned a balance is carried forward to 1915 in profit and loss account of £638,191, as compared with £556,403 in the previous year. The total assets on December 31, 1914, amounted to £24,835,288.

ARMY, NAVY AND GENERAL ASSURANCE ASSOCIATION, LIMITED.

Head Office: 217 Piccadilly, London, W. Established 1901. Capital authorised, £250,000; subscribed, £25,000, in cumulative Preference shares of 5*s.* each, the paid-up capital on December 31, 1914, amounting to £20,000.

The Company transacts accident, fire, burglary and miscellaneous (including horse) insurance business, and specially provides in such matters for the requirements of military and naval officers and officials of the Indian Civil Service. It has agencies in the principal British military and naval stations at home and abroad. It also acts as agent for the National Mutual Life Assurance Society for life assurance business, and possesses the sole agency for that Company in India.

The accounts for the year ended December 31, 1914, show that the net premiums amounted to £17,574, and the assets at close of year to £26,100 (including purchase of business account, £10,800, and development and branch organisation account, £4,000).

ATLAS ASSURANCE COMPANY, LIMITED.

Head Office: 92 Cheapside, London, E.C. Established 1808. Capital subscribed, £2,200,000, in 220,000 shares of £10 each, £1 4*s.* paid; paid up, £264,000. In 1904 the Company acquired the goodwill and undertaking of the Manchester Assurance Company, and the absorption was completed in 1905. In 1911 a controlling interest in the Essex and Suffolk Equitable Insurancee Society was acquired, and in this connection the Company has outstanding £98,922 "Essex and Suffolk" Four per Cent. Debenture stock. The Company transacts life, leasehold, and fire insurance, and a department for accident, burglary and fidelity business was opened in 1907. A dividend of 8*s.* per share, less income tax, was declared in respect of the year 1914. Price of shares, £6 5*s.*; yield, 6¼ per cent.

FIRE DEPARTMENT.—Net premiums in 1914 amounted to £1,039,954; losses (including contributions to fire brigades) to £583,619; and expenses, including commission and taxes, to £402,717. After adjustment of the reserve for unexpired risks on the basis of 40 per cent. of the premium income, as in the previous year, the fire underwriting of the year showed a profit of £87,354, which was carried to profit and loss account. Interest earnings on the fire fund amounted to £41,151. The fire reserves (including reserve for unexpired risks) thereafter amounted to £1,219,064, or to 117 per cent. of the year's departmental premium income, as compared with 111 per cent. at close of 1913.

LIFE DEPARTMENT.—New business, 1914, £598,583, after deduction of reassurances. Net life premium income, £212,942. Claims by death, £135,915 ("well within the expectation"). Expenses, about 12·6 per cent. of premiums. Life funds at close of 1914, £2,279,946, including life investment reserve fund of £60,000. Interest yield, after deduction of income tax, about £4 0*s.* 10*d.* per cent.

A quinquennial valuation was made at December 31, 1914. Mortality table used, $O^{M(5)}$; interest assumed, 3 per cent. Total profit ascertained for quinquennium, including £1,147 brought forward, £297,821, of which £37,277 had been paid during the quinquennium as interim bonuses and in reduction of premiums. After writing down securities by £93,503 and setting aside an investment reserve of £60,000, the available cash surplus amounted to £106,797, out of which "compound" reversionary bonuses were declared on participating policies of 20*s.* per cent. per annum, leaving £244 to be carried forward. Life policyholders are treated with

liberality, as the shareholders take no portion of a valuation surplus, contenting themselves with a small annual contribution, which in 1914 amounted to £6,085, less than 3 per cent. of the year's life premiums.

Sinking Fund and Capital Redemption Account.—Premiums in 1914, £16,559; interest, &c., £3,744. Departmental fund increased from £103,806 to £113,387.

Employers' Liability, Accident and General Account.—Premiums, £55,791. Fund at close of year, £57,950, including £11,551 in respect of outstanding liabilities.

Generally.—After provision for the dividend for 1914 the funds of the Company (apart from capital and Debenture stock) amounted to £3,762,640. Total assets, December 31, 1914, £4,474,372, certified in the directors' belief as in the aggregate fully of the value stated, less the amounts of the investment reserve funds.

BRITANNIC ASSURANCE COMPANY, LIMITED.

Head Office: Broad Street Corner, Birmingham; London Office: 1 Finsbury Square, E.C. Formerly known as the British Workman's and General Assurance Company, Limited. Established 1866. Capital subscribed December 31, 1914, £179,992; paid up £82,497, some shares being fully and others partly paid. Amount of each share, £1. Dividends and bonuses paid to shareholders in 1914, £35,617.

This Company transacts both ordinary and industrial life business. In its ordinary department in 1914 the new sums assured amounted to £403,042; the total premiums to £252,012; claims by death to £65,611, and by survivance to £83,556; expenses of management, inclusive of commission, to £35,505 (about 14·1 per cent.), and funds at close of year to £1,595,499. Annual valuation was made December 31, 1914, and after making an addition of £50,000 to the investment reserve fund and a special provision of £40,000 for exceptional liabilities arising under the Courts (Emergency Powers) Act, 1914, a reversionary bonus at 26*s.* per cent. was declared. The net interest yield in 1914 was about £4 5*s.* 5*d.* per cent.

In the industrial department in 1914 the total premiums amounted to £1,068,613, claims and surrenders to £529,992, commission and expenses to £450,540 (about 42·1 per cent. of the premiums), and funds at close of year to £1,883,216. Total assets, December 31, 1914, £3,817,351.

BRITISH AND FOREIGN MARINE INSURANCE CO., LTD.

(*See also* **Royal Insurance Company, Limited.**)

Head Office: 5 Castle Street, Liverpool; London Office: 1 Old Broad Street, E.C. Established 1863. Capital authorised and subscribed, £1,340,000; paid up, £268,000. Shares £20 each, on which £4 is paid up and added. Dividend for 1914, £1 2*s.* 6*d.* per share, being equivalent to 28½ per cent., less income tax, was more than covered by interest earnings, irrespective of trading profits. The Company does one of the largest marine insurance businesses in the kingdom. An agreement was entered into in 1908 whereby the Royal Insurance Company, Limited, purchased and assumed the control of this Company.

The underwriting account of 1913 was closed in 1914 with a profit of £78,514. The earnings from interest, less income tax, amounted to £79,732. The premiums received in 1914 amounted to £495,343, and the first year's settlements absorbed 26·5 per cent. of this sum, as compared with 33·8 per cent. in the 1913 account. After provision for dividend and income tax on profits, there was a balance of £203,065 at the credit of profit and loss account. Total assets, December 31, 1914, £2,444,472.

BRITISH CROWN ASSURANCE CORPORATION, LTD.

Chief Offices: 183 West George Street, Glasgow; 110 Cannon Street, London, E.C. Established 1907. Capital authorised, £500,000; subscribed, £250,000; paid up on December 31, 1914, £100,000, in 50,000 shares of £5 each with £2 paid. No dividend was declared in respect of the year 1914.

Transacts fire, accident, marine, and general insur-

ance business. During the year ended December 31, 1914, the net premium income in all departments amounted to £129,343, the interest and fees to £2,654, the net losses to £85,327, and the expenses, inclusive of commission, to £56,097. The revenue account showed a balance of £5,148, subject to unexpired risks. Total assets, December 31, 1914, £105,148.

BRITISH DOMINIONS GENERAL INSURANCE CO., LTD.

Head Office: 1 Royal Exchange Avenue, London, E.C. Established 1904. Capital on December 31, 1914: authorised, £600,000; subscribed, £580,002; paid up, £345,002, in 50,000 Ordinary shares of £3 with £1 paid, 42,667 Ordinary shares of £3 fully paid, 60,000 Ordinary shares of £3 with 15*s.* paid, and 40,667 Preference shares of £3 fully paid. Since the close of last year the authorised capital has been increased to £1,000,002. The Company acquired in 1914 the business of the North Western Insurance Company, Limited, and the figures of that Company's business are included in the B.D.G. Company's accounts for 1914. In 1915 the Company acquired the business of the United Dominions Insurance Company, Limited, and the subscribed capital of the B.D.G. Company thereafter will be £779,481, with £381,780 paid up. The principal figures are as follows for the year to December 31, 1914: Marine Revenue Account—Premiums, £104,110; losses, £263,228; carried to balance sheet: reserve fund, £70,000; investments reserve fund, £3,500; revenue account balance, £281,739. Fire and General Revenue Account—Premiums, £206,033; to balance sheet, £87,306. Balance sheet shows reserve fund of £100,000, investment reserve fund of £42,000, fire and general fund of £87,306, marine fund, £265,851. Dividends were declared on Preference shares at 6 per cent., less tax, on January 1, 1915, and on the Ordinary shares at 6 per cent., less tax, for the year 1914, at the annual meeting in March 1915. In respect of the year 1915 interim dividends for first half-year have been paid at rate of 6 per cent. per annum, less tax, on the Preference shares, and 7 per cent. per annum, less tax, on the Ordinary shares. Assets, December 31, 1914, £872,112.

BRITISH ENGINE, BOILER AND ELECTRICAL INSURANCE COMPANY, LIMITED.

In 1912 the Royal Insurance Company (*q.v.*) acquired the shares of this Company.

BRITISH EQUITABLE ASSURANCE CO., LTD.

Head Office: 1–3 Queen Street Place, London, E.C. Established 1854. Capital authorised, £500,000, and subscribed, £300,000; paid up, £34,500. Shares are for £10 each with £1 3*s.* paid up, 3*s.* of which was provided by a special dividend in respect of 1913. From and after the valuation on January 31, 1909, when the amount of the shareholders' undivided profits (£33,786) was transferred to the life assurance fund, a new arrangement, in accordance with new memorandum and articles of association, came into force, whereby 2*s.* 6*d.* per share per annum is payable to the shareholders, and in addition they are to receive 10 per cent. of the surplus disclosed in the life department and 50 per cent. of the divisible profits arising in the other departments. The dividend during the current quinquennium has been fixed at 3*s.* per share per annum.

The quinquennial valuation on January 31, 1914 was made for assurances by O^M Mortality Tables, net premiums, and 3 per cent. interest. The profit for the quinquennium was £154,986, to which has to be added £10,684 brought forward from the last valuation, making a total of £165,670. Of this sum, £42,223 was applied to writing down securities, £1,250 to valuation expenses, £7,815 to dividend to shareholders during quinquennium, £5,469 was paid in interim bonuses to policyholders, and £3,800 was set aside to commence a staff pension fund. After deducting these amounts there was an available balance of £105,113, of which £88,750 was divided among policyholders, £6,501 hypothecated to provision for early payment of claims, and £9,862 carried to profit and loss in respect of the shareholders' share of profits. The reversionary bonus declared was

The London Office issues Drafts on demand on its Head Office and Branches in Australia, New Zealand, Tasmania, Fiji, and Port Moresby and Samarai in Papua (British New Guinea), and on its Correspondents in Tasmania. Makes Mail and Cable Transfers. Negotiates and Collects Bills of Exchange. Receives Deposits for Fixed Periods on Terms which may be known on application; and conducts every description of Australasian Banking business.

DAVID GEORGE, Manager.

21*s.* per cent. per annum on ordinary with-profit policies, and 24*s.* per cent. per annum on policies in the life abstainers' section. With-profit policies becoming claims in the current quinquennium will receive interim bonuses at the rate of 15*s.* per cent. per annum.

The Company in 1905 commenced the transaction of fire, burglary and accident insurance. The fire business is confined to non-hazardous risks.

In the year ended January 31, 1915, in the life department, the net new sums assured amounted to £162,532. Total life premium income amounted to £108,266; the claims to £172,879 (the amount of those arising by death, £92,041, being 90 per cent. of the "expectation"); expenses in life department to about 22.6 per cent. of life premiums; life fund at close of year to £1,559,544, and net interest yield to about £3 17*s.* per cent. Fire, accident and general premiums (net) of £27,401 and employers' liability premiums of £2,849 were received. Fire, accident and general fund, £45,212. Employers' liability, &c., fund, £1,737. These funds are irrespective of further provision for outstanding claims. Total assets on January 31, 1915, £1,705,987. About two-thirds of assets were invested in ground-rents.

BRITISH GENERAL INSURANCE COMPANY, LIMITED.

Head Office: 66 Cheapside, London, E.C. Established 1904. Capital authorised, £250,000; subscribed on December 31, 1914, £200,000; paid up, £50,000, in 200,000 shares of £1 with 5*s.* paid. In July 1914 an issue of 100,000 shares of £1 each, 5*s.* paid, was made at a premium of 5*s.* 6*d.* per share. Dividend for 1914, 10 per cent., less income tax, was more than covered by interest earnings. Price of shares, 10*s.*; yield, £5 0*s.* 9*d.* per cent.

The Company transacts life, fire, burglary, accident and miscellaneous insurance. Premium income from fire, accident and general departments in 1914 after deduction of reinsurances, £150,875; interest earnings, &c., £4,869; claims and bonus to assured, £71,560; balance of profit and loss account at close of 1914, £43,812, of which £5,000 was placed to investment reserve, £10,000 to special life reserve, £20,000 to general reserve, and £1,000 written off furniture and stationery. Assets, December 31, 1914, £202,872.

BRITISH LAW FIRE INSURANCE COMPANY, LIMITED.

Head Office: 5 Lothbury, London, E.C. Established 1888. On December 31, 1914, the nominal capital was £1,100,000; subscribed, £1,050,000; paid up, £150,000. There were at that date 100,000 shares of £10, with £1 paid up, and 50,000 fully-paid shares of £1, the fully-paid shares having been issued in 1907 at a premium of £2 15*s.*, producing a premium of £137,500. Dividend for 1914 was 17½ per cent. less income tax. Price of partly paid shares, £2 17*s.* 6*d.*; yield, 6¼ per cent.; price of fully paid shares, £3 13*s.* 9*d.*; yield £4 16*s.* 10*d.* per cent.

During the 26 years of its existence this Company has been well managed. It has a strong legal board, all the directors being past or present members of leading London firms of solicitors. The business is mainly in non-hazardous risks, consequently the premium income is not so large as it might easily have been made, but it gives a high proportionate profit. In 1914 the fire premium income amounted to £110,526, after deduction of reinsurances, showing an increase of £1,923, and the losses, including charges for fire brigades and salvage corps, amounted to £39,748, or to 36 per cent. During the past 13 years the loss ratio has always been under 40 per cent. Expenses are somewhat high—in 1914 about 46·8 per cent.; but the general result was satisfactory, for last year's trading profit may be estimated to have amounted to about 16·5 per cent. of the premiums, irrespective of interest. The Company a few years ago opened an accident department. The employers' liability account is separately shown in accordance with the form prescribed under the Act of 1909. The premiums in this section amounted in 1914 to £12,782, and the relative fund at end of the year was £17,535, including £2,422 reserved

The Bank has numerous Branches in London and the Suburbs and Branches or Agents in all the principal Cities and Towns in the United Kingdom, and Correspondents throughout the World.

TERMS.—Current Accounts.—These are kept according to the usual custom of London and Country Bankers.
Deposit Accounts.—Deposits are received at Interest, subject to notice of withdrawal, or by special agreement in accordance with the usual custom.

GENERAL BUSINESS.—The Agency of Country and Foreign Banks, whether Joint Stock or Private. Circular Notes and Letters of Credit issued for all parts of the Continent of Europe and elsewhere. Purchases and Sales effected in all the British and Foreign Stocks and Securities. Dividends on Stocks and Shares, the half-pay of Officers, Pensions, Annuities, &c., received for customers without charge.
The Officers and Clerks connected with the Bank are required to sign a Declaration of Secrecy as to the transactions of any of its customers.

EXECUTORSHIPS AND TRUSTEESHIPS.—The Bank, having the necessary powers, is prepared to undertake the Office of Executors, Trustees and Custodian Trustees, on terms particulars of which can be obtained from the Head Office or at any Branch of the Bank.

NOTE.—In pursuance of the Treasury Regulations it is hereby stated that no liability attaches to the Consolidated Fund of the British Government in respect of any act or omission of the Bank.

for outstanding claims. The general insurance account shows premiums of £9,757 and a fund of £3,903. The receipts from interest and fees, less income tax, amounted to £15,060. On December 31, 1914, after provision for dividend, the balances and reserves, exclusive of investment reserve funds, amounted to £261,718, representing over 197 per cent. of the year's premium income, and disclosing a very strong position. Assets, December 31, 1914, £482,807. The Stock Exchange securities held on December 31, 1913, were valued at the price on that date and those since acquired at cost price. The depreciation shown on this basis was more than provided for by the investment reserve fund of £24,431.

BRITISH LEGAL AND UNITED PROVIDENT ASSURANCE COMPANY, LIMITED.

Chief Office: 78 New Oxford Street, London, W.C.; Registered Office: 89 West Regent Street, Glasgow. Established 1863. Authorised capital, £250,000. On June 30, 1915, paid-up capital £196,128, in 169,850 shares of £1 fully paid and 52,557 shares of £1 with 10*s.* paid.

This Company represents an amalgamation (in 1909) of the "British Legal" and "United Provident" offices.

Transacts life and industrial business. In the financial year to June 30, 1915, premiums and funds were as follows: Industrial premiums, £304,266; funds, £358,056; ordinary life premiums, £14,533; funds, £85,020; sickness, &c. premiums, £198; funds, £3,434. Assets, June 30, 1915, £731,631, include £297,734 in respect of "organisation expenses and extension, including purchase of businesses."

BRITISH LIFE OFFICE, LIMITED.

Head Office: 154 St. Vincent Street, Glasgow. Established 1896. Capital authorised, £100,000; subscribed and paid up, £25,000, in fully-paid £1 shares. No dividend was declared in respect of 1914.

The Company transacts life and bond investment business and makes advances on security of house property in combination with life policies. It issues policies of £25 and upwards.

In 1914 the premiums in the life account amounted to £3,813, and the life fund at close of year to £29,136. In the "annuities certain account" the fund at close of year was £51,028. In the "bond investment and endowment certificate account" the premiums were £11,587 and the fund was £76,635. Total assets, December 31, 1914, £193,976, including £5,035 "establishment and extension of business account." Investments in mortgages of property within the United Kingdom amounted to £151,780. The last quinquennial valuation took place on December 31, 1914, when the unappropriated surplus in the life branch was £720, after transferring £2,500 to the Investment Reserve Fund.

BRITISH WIDOWS' ASSURANCE COMPANY, LIMITED.

Head Office: 1 Old Street, London, E.C. Established 1902. Capital authorised, issued, and paid up December 31, 1914, £100,000, in 20,000 Six per Cent. Cumulative Preference shares of £1 each, 6,000 Ordinary shares of £10 each, issued as fully paid in respect of goodwill, and 2,000 Ordinary shares of £10 each.

The Company "transacts industrial and ordinary life assurance business, and also grants industrial assurances, specific premiums for which, included in the price of tea supplied by the Company, are carried to the life assurance fund."

Industrial premiums in 1914, £72,305; industrial fund, £31,585; ordinary life premiums, £4,955; life fund, £14,901. Trading account: sales, £44,943; purchases and expenses of distribution, £44,571; stock at end of year, £1,852.

Assets, December 31, 1914, £241,585, include goodwill (£60,000) and establishment account and provision of life assurance fund (£128,062).

CALEDONIAN INSURANCE COMPANY.

Chief Offices: 19 George Street, Edinburgh; 82 King William Street, London, E.C. Established 1805. Capital authorised, £1,000,000; subscribed, £537,500; paid up, £107,500. Amount of each share, £25, whereof £5 paid. An issue of £100,000 Four-and-a-Half per Cent. Debentures, repayable in 10 years, was made in 1907, the amount outstanding at December 31, 1914, being £30,000. Dividend declared in 1915, 24*s.* per share, less income tax. Price of shares, £16 2*s.* 6*d.*; yield, £7 9*s.* 1*d.* per cent. Originally the shareholders were entitled to one-sixth of the divisible life profits, but at the annual meeting in 1903 a resolution was passed reducing their share to one-tenth.

The Caledonian transacts life, fire, employers' liability, burglary and personal accident business, and is the oldest Scottish insurance Company. The quinquennial valuation of the life department at end of 1912 was made on the net premium system as before, the table of mortality used for the valuation of assurances having been the British Offices' O^M Table, except for survivorship assurances, where the Carlisle Table was employed. Annuities were valued by the Government Annuity Tables, 1883. The rate of interest assumed was 3 per cent. throughout. The surplus for the quinquennium amounted to £273,475, from which, however, £27,517 was deducted, £7,517 being written off marketable securities and £20,000 being carried to a reserve account. The net surplus accordingly amounted to £245,958. The sum of £207,157 was treated as divisible surplus, of which £12,436 had already been allocated to participating policyholders during the quinquennium in the form of interim bonus. The shareholders' proportion of the divisible surplus was £20,716, leaving £174,005 to be distributed as quinquennial bonus to participating policyholders. The reversionary bonuses to whole-of-life policies were at the rate of 30*s.* per cent. per annum over the quinquennium, and on endowment assurances the rate was 25*s.* per cent. per annum. A balance of £51,237 was carried forward to the next valuation.

In 1914 the net new life business amounted to £702,980. The total net life premium income amounted to £286,104 (of which expenses absorbed about 13·6 per cent., allowing for annuities), death claims to £150,976, endowment claims to £60,144, and life funds at close of year to £3,462,827. The net interest yield on the life funds was about £4 6*s.* 5*d.* per cent.

The fire premiums in 1914 amounted to £449,704, and the fire losses (£289,457) and expenses (£168,166, including taxes) to £457,623. Interest earnings (including rents) on the fire funds amounted to £11,773. A sum of £4,834 was transferred to profit and loss account, and the fire funds at close of year amounted to £352,899, of which £200,000 was reserve fund and £152,899 a reserve for unexpired risks. A balance of £79,808 was carried forward to 1915 in profit and loss account, after provision for dividends. As the result of the operations above referred to the fire funds and balance of profit and loss account (after dividend) carried forward together represented over 96 per cent. of the fire premium income. In employers' liability department premiums in 1914 amounted to £24,103, and fund at close of year, less provision for outstanding claims, to £15,667. Personal accident, &c., premiums, £2,613; fund (exclusive of outstanding claims), £3,154. Leasehold redemption premiums, £2,864; fund, £13,807. General insurance premiums, £4,325; fund, £2,379. Total assets, December 31, 1914, £4,274,672.

CAR AND GENERAL INSURANCE CORPORATION, LTD.

Head Office: 83 Pall Mall, London, S.W. Established 1903. Capital authorised, £250,000; subscribed at January 1, 1915, £125,000, in shares of £1: 90,011 shares with 5*s.* called and 9,989 with 1*s.* called; also 25,000 Five per Cent. Cumulative Preference shares, fully paid; the paid-up capital amounting to £48,002. A dividend at the rate of 10 per cent. per annum, free of income tax, was declared for the year on the Ordinary shares. The net premiums for 1914 amounted to

In addition to capital, the balance sheet on December 31, 1914, showed reserves and balances, after provision for dividend (exclusive of reserve for claims outstanding, £75,000), aggregating £142,023. Expenses incurred in establishing offices and agencies amounting to £15,000 appear in balance sheet amongst assets aggregating £294,823.

CENTRAL INSURANCE COMPANY, LIMITED.

(*See* Liverpool & London & Globe Insurance Co.)

CENTURY INSURANCE COMPANY, LIMITED.

Chief Offices: 18 Charlotte Square, Edinburgh; 27 Queen Victoria Street, London, E.C. Established in 1885 as the "Sickness and Accident Assurance Association, Limited"; name changed as above, 1901. Capital subscribed at December 31, 1914, £315,000; paid up, £35,000. Shares for £4 10*s.* each with 10*s.* paid. Dividend for year 1914, 3*s.* 3*d.* per share, less income tax. Price of shares, £2 13*s.* 9*d.*; yield, £6 2*s.* 8*d.* per cent. Shareholders are entitled to one-tenth of the profits in the life departmnet.

This Company transacts ordinary life assurance business, in addition to fire, burglary, sickness and accident insurance. The life department is increasing in importance. In 1914 life policies were issued for £357,033 in net sums assured; the net life premium income amounted to £110,264 (increased by £11,154), and the life funds at close of year (increased by £108,768) to £818,932 (including £10,000 reserve fund). Net interest yield on life fund in 1914, about £4 3*s.* 5*d.* per cent.; expenses about 9·9 per cent. of life premiums.

A quinquennial valuation was made at December 31, 1912, on a strong basis (O^M Table of Mortality, net premiums, and 3 per cent. interest), and bonuses were declared at the excellent compound rate of 30*s.* per cent. per annum.

In the fire, sickness, employers' liability, accident and general departments in 1914 the fire premiums amounted to £92,517, and the other premiums to £65,740; fire claims paid and outstanding, £61,171; other claims, £31,262; and at close of year the sickness fund amounted to £163,360, the accident and general fund to £44,262, employers' liability fund to £29,498, and the fire fund to £102,007. Total assets, December 31, 1914, £1,273,747.

In November 1912 an agreement was entered into whereby the business of the Anglo-Scottish General Commercial Insurance Company, Limited, was brought under the supervision and control of the Century Insurance Company, Limited.

CITY EQUITABLE FIRE INSURANCE COMPANY, LTD.

Head Office: 38 Old Jewry, London, E.C. Established 1909. Capital authorised and subscribed, £250,000; paid up, £50,000, in 200,000 Preference shares and 50,000 Ordinary shares, both of £1 each with 4*s.* paid.

The annual report, for 14 months ended February 28, 1915, shows a premium income of £154,086 and assets of £126,514. After provision for a dividend on the Ordinary shares of 9*d.* per share and transferring £5,000 to additional reserve fund, a balance of £11,851 is carried forward. Fire fund, £67,770. Investment reserve, £5,000.

CITY LIFE ASSURANCE COMPANY, LIMITED.

Head Office: 6 Paul Street, Finsbury, London, E.C. Established as the "British Homes Assurance Corporation, Limited," in 1907. Name changed to above, 1909. Capital authorised, December 31, 1914, £500,000; paid up, £108,265.

The Company transacts ordinary and industrial life business and makes advances on house property.

For the year ended December 31, 1914, the life assurance account, ordinary branch, shows premiums, £59,427, and life fund, £143,476. The industrial life premiums amounted to £30,586, and relative fund at close of year to £15,513. The bond investment premiums amounted to £33,358, and the fund to £339,142.

CITY OF GLASGOW LIFE ASSURANCE COMPANY.

(*See* Scottish Union and National Insurance Company.)

CLERGY MUTUAL ASSURANCE SOCIETY.

Head Office: 2 and 3 The Sanctuary, Westminster, London, S.W. Established 1829.

This Society is one of the four mutual non-commission-paying life assurance societies, and is one of the most attractive life offices in the country to those persons who are qualified to be policyholders. Its membership was formerly restricted to the clergy of the Churches of England and Ireland and of the Episcopal Church of Scotland, their relatives, and its own officials. A special Act of Parliament, which received the Royal Assent in July 1914, provides that assurances may also be effected by "persons who are or have been members of or on the staff of any university, public school, college, or kindred institution in the United Kingdom which the directors may from time to time approve for that purpose." Clergymen as a class show remarkable longevity, and the incidence of mortality in this Company has always been exceptionally favourable. The bonuses have been at a very high standard, and the reserves are strong. The rates of premium are below the average.

The last quinquennial valuation for assurances, on May 31, 1911, was made by the $O^{M(5)}$ Table combined with net premiums and interest at 2½ per cent. This combination represents one of the most stringent standards of valuation employed in life assurance business. The total bonus distribution over the quinquennium was £553,995, representing over 40 per cent. of the premiums received. The reversionary bonuses declared ranged from about 30*s.* per cent. to above £4 per cent., according to age at entry and duration of policies.

In the financial year which ended on May 31, 1915, the new assurances (no reassurances having been effected) amounted to £253,303; the total net premium income to £277,409; the claims by death to £306,502 (about £47,000 below expectation); and the funds at close of year to £4,818,126, after payment of bonuses in cash or by reductions of premium amounting to £42,531. Interest produced about £3 13*s.* 10*d.* per cent. on the funds after deduction of income tax. The expenses of management absorbed only £6 16*s.* 8*d.* per cent. of the premiums.

The reduced annual premium system of this Society gives a large amount of immediate assurance for a fixed premium. Only four-fifths of the tabular rates are payable thereunder, the other one-fifth being automatically liquidated by bonuses, should they prove sufficient. Under a recent bye-law the application of the non-forfeiture system has been adopted to the fullest extent.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY.

Chief Office: 15 St. James's Square, London, S.W. Established 1824. Capital authorised and subscribed, £500,000. Shares for £25 with £2 10*s.* paid. Shareholders are entitled annually to a dividend limited to 5 per cent., which is all but met by the earnings of the capital itself, and quinquennially to a share of the profits—originally one-sixth, and now restricted to one-tenth (if not less than £62,500). The last valuation, as at June 30, 1911, produced a profit for shareholders of £75,607, including £25,000 paid during the quinquennium as interim bonus, and enables dividends and bonuses to be distributed in equal half-yearly payments of 9*s.* per share, free of income tax, in January and July annually until the next quinquennial declaration of profits. Price of shares, £20 10*s.*; yield, £5 10*s.* 2*d.* per cent.

This strong and influential life office is one of the most attractive in the country to new entrants, for recent valuations have been made on a most stringent

London Committee: J. LEIGH WOOD, Esq., C.M.G.; Hon. SIDNEY PEEL; F. W. ASHE, Esq.

basis, and amply provide for the automatic manufacture of large profits. The basis adopted in 1911 was a combination of the $O^{M(5)}$ Mortality Table, net premiums, and 2½ per cent. interest. Further special reserves amounting to over £370,000 were also made. Bonuses declared to policyholders have been at an exceptionally high rate. In 1911 the reversionary additions in the case of whole-life policies varied from about £1 15*s.* to over £4 per cent. per annum, according to age at entry and duration of policy. Bonuses on endowment assurances are at four-fifths of the whole-life percentage. The Society has recently introduced (1) a new option policy with a low rate of premium during the first five years, at the end of which time the tabular non-profit premium for the age then attained becomes payable, while at any time thereafter by payment of an additional premium the policy can be converted into a profit assurance; (2) educational endowments with premiums ceasing at the death of a parent, spreading the expense of children's education over a series of years; and (3) deferred assurances for children on a profit basis. A speciality is made of assurance of "under-average" lives at adequate and reasonable rates. For non-participating assurances the rates were recently reduced to the level of those charged under the discounted bonus or "prime cost" system, which appeals to persons who require the largest amount of immediate assurance in return for a fixed payment. Thus those seeking assurance at low rates of premium have the option of a definite contract or a policy subject to increase or diminution according to the amount of the declared bonuses.

The net new life business for the last financial year, ending June 30, 1915, amounted to £672,732 in sums assured; total net life premium income (increased by £10,901), £448,967; death claims (the mortality being described as well within the amount expected, although claims of £65,417 were "directly due to the War"), £349,052; claims by survivance, £14,607; expense ratio, 12·1 per cent. of premiums. Life assurance fund at close of year, £6,223,406, showing an increase of £222,270. Redemption assurance fund, £178,887. Total assets, £6,570,612. The interest yield was about £3 17*s.* 1*d.* per cent. after deduction of income tax.

During the year ending June 30, 1913, the Society purchased 4,954 of the 5,000 shares of the General Reversionary and Investment Company, Limited, at a price of £150 per share. The General Reversionary and Investment Company was founded in 1836, and its capital amounts to £500,000, in fully-paid shares of £100. Dividends for a long series of years had been at the rate of 5 per cent.

COMMERCIAL UNION ASSURANCE COMPANY, LTD.

Head Office: 24, 25 and 26 Cornhill, London, E.C. Established 1861. Capital authorised and subscribed, £2,950,000; paid up, £295,000. Shares were formerly or £50 with £5 paid, but in 1907 were subdivided into shares for £10 with £1 paid. Dividend declared for year 1914 was 100 per cent. (20*s.* per share, less income tax). Price of shares, £22; yield, £4 10*s.* 11*d.* per cent. The shareholders were formerly entitled to one-fifth of the divisible profits in the life department, but their share is now limited to one-tenth. There were issues of £1,929,379 Four per Cent. Terminable Debenture stock on December 31, 1914 ("West of England," £281,034; "Palatine," £253,880; "Union," £564,950, and "Ocean," £829,515).

The Company took over the Hand-in-Hand Fire and Life Insurance Society in 1905. The Hand-in-Hand was the oldest insurance office in the country. Both new and renewal "Hand-in-Hand" fire and life business continues to be transacted at the Hand-in-Hand chief office, 26 New Bridge Street, E.C., and at all its branches throughout the country, and these offices also transact accident and fidelity guarantee business. The business of the Union Assurance Society (established 1714) was purchased in 1907, a separate Company, entitled Union Assurance Society, Limited, being established; but the whole of the fire and accident

business of that Society and other subsidiary or controlled companies is included in the Commercial Union accounts.

In 1906 the Company acquired the business of the Accident Insurance Company, Limited.

As from January 1, 1910, the Company acquired the business of the Ocean Accident and Guarantee Corporation, Limited, which had the largest accident business of any British insurance company. A working agreement, under which the Company guarantees certain insurance contracts of the Liverpool Victoria Insurance Corporation, Ltd. (*q.v.*), was entered into in May 1912. In 1912 the Company purchased the business and assets of the Imperial Accident Insurance Company, Limited.

The Commercial Union has seven departments, these being fire, marine, life, general accident, personal accident, employers' liability, and leasehold, &c., insurance. The accident, employers' liability and leasehold departments are of recent origin and show satisfactory results. The other departments have for many years been managed with a consistent and conspicuous success in each case that for an office doing so miscellaneous a business is quite phenomenal. The combined total premium income of the Company in 1914 exceeded eight millions sterling, being greater than that of any other British insurance company not transacting industrial business.

Fire Department.—In 1914 the fire premiums (increased by £176,945) amounted to £3,537,279, the losses to £1,961,259 (55·4 per cent. of the premiums), and the expenses to £1,233,062. Through the year's operations the fire fund, after transfer of £160,000 to profit and loss, was increased by £182,568 to £3,578,275, and at close of the year represented over 101 per cent. of the fire premium income. In 1906 the Company paid £794,974 for San Francisco losses.

Marine Department.—The Commercial Union has a very profitable marine insurance business. In 1914 the net marine premiums amounted to £474,007, and losses and expenses to £290,632. A sum of £65,000 was transferred to profit and loss, and the marine fund was increased by £117,297 to £1,001,094, representing over 211 per cent. of the premium income, showing an immensely strong position.

Life Department.—In 1914 the net new sums assured were £2,433,948. Excluding the acquired "West of England," "Hand-in-Hand," and "Union" business, the total net life premiums amounted to £657,887, in addition to £107,557 received as consideration for annuities; expenses to about 11·7 per cent. of the premiums, a moderate proportion, especially considering the large extent of the new business; claims by death to £329,546 (within "expectation"); and the life fund during the year was increased by £453,715 to £6,048,630, exclusive of investment reserve fund of £3,747. Interest produced a net return of about £4 6*s.* 2*d.* per cent The last quinquennial valuation (at close of 1912) was made on a strong basis: O^M Table, 3 per cent. interest, and net premiums. The surplus amounted to £559,497 (including £62,146 brought forward from 1907), of which £454,115 was divided, in addition to £26,662 paid during quinquennium as interim bonuses, and £78,720 was carried forward. Cash bonuses to participating policyholders (participating for the first time, or who had commuted previous bonuses in cash) averaged 27 per cent. of the premiums paid during the quinquennium. Bonuses in reversionary form on whole-life policies ranged from about 29*s.* per cent. per annum to much higher amounts, according to age at entry and duration of policies. In 1914 the Hand-in-Hand premiums amounted to £178,965, and funds at close of year to £3,563,010, exclusive of investment reserve fund of £7,189; premiums and funds in West of England section were £13,350 and £508,908 respectively; in the Union life fund £229,657 and £3,941,964 (exclusive of investment reserve of £3,513) respectively; in the Liverpool Victoria Life Fund, £21,183 and £127,981 respectively.

The Company on December 2, 1911, concurrently with the fiftieth anniversary of its formation, introduced

The Bank undertakes the office of Executor and Trustee on terms, particulars of which may be obtained at Head Office and Branches.

as a special feature in its life department what is described as its "Jubilee policy," full particulars of which are given in a published leaflet. The main idea of this scheme is as follows: A policy is effected at non-profit rates (which are lower than the average charged in British life offices) offering the following facilities: (1) for limiting future premiums by odd payments made by the policyholder whenever convenient to him; (2) for making the sum assured payable in the policyholder's lifetime by similar odd payments, and (3) for changing at any time from the non-participating to the participating system.

General Accident Department.—In 1914 the general accident premium income amounted to £1,764,580. After transference of £190,000 to profit and loss account, £255,640 being transferred to the general accident fund from the accident insurance and employers' liability accounts, the general accident fund at close of year amounted to £1,215,144.

Accident Department.—In 1914 the accident premium income amounted to £443,755. After transferring £74,656 to the general accident account the fund at the close of the year amounted to £204,755, including £56,837 for outstanding claims.

Employers' Liability Department.—Premiums in 1914, £718,651. After transferring £180,985 to the general accident account the fund at end of year was £569,640, including provision of £282,179 for outstanding claims.

Leasehold Department.—Premiums in 1914, £34,188. Fund at close of year, £302,873.

Assets.—The total assets on December 31, 1914, amounted to £26,774,505, after transferring £316,185 to investment reserve and contingency fund. After provision for dividend for 1914 a sum of £160,115 is carried forward in profit and loss account. The balance sheet shows an investment reserve and contingency fund of £550,000 and a guarantee and pension fund of £190,202

CONSOLIDATED ASSURANCE COMPANY, LIMITED.

Life Office: 9 Fleet Street, London, E.C. Fire and General Office: St. Swithin's House, St. Swithin's Lane, London, E.C. Established 1903. Capital authorised and issued, £500,000, in 50,000 Ordinary shares of £10 each, on which various amounts are paid up. On December 31, 1914, the paid-up capital amounted to £75,875. Dividend for 1914, 5 per cent., free of income tax.

The Company transacts life, accident, fire and contingency insurance and reinsurance business, and its operations extend to several European countries.

In 1914 the net life premium income was £28,810; the life fund at close of year, £84,035; the fire and general net premium income was £239,091, and the relative fund at close of year £106,329. Balance carried forward in profit and loss account to year 1915, after provision for dividend, £7,793. Total assets, December 31, 1914, £396,919, included "organisation expenses" amounting to £31,891, and "expenditure in suspense," £3,390.

CO-OPERATIVE INSURANCE SOCIETY, LIMITED.

Head Office: 109 Corporation Street, Manchester. Incorporated, 1867, under the Companies Act, 1862. Re-incorporated, 1899, under the Industrial and Provident Societies Act, 1893. Capital subscribed, December 31, 1914, £100,000, in shares of £1 each with 4*s.* paid. Capital paid up, £20,000.

The Company transacts life (ordinary and industrial), fire, accident, employers' liability and general insurance business. The following figures are taken from the annual report for the year 1914:—

Ordinary Life Assurance: New sums assured, £82,068; total premiums, £33,188; fund (increased during year by £25,285), £214,210. *Special Branch* for small ordinary assurances: new sums assured, £74,167; premiums, £14,831; fund, £51,320.

Industrial Life Assurance: Premiums, £4,467; fund, £11,722.

Collective Life Assurance: Premiums, £107,109; claims by death, £[illegible]; bonuses in cash, £16,058;

fund, £7,658. Policies in this section, assuring lives of their members and husbands and wives, were held by 462 societies.

FIRE INSURANCE: Premiums, £58,649; fund (increased by £28,569), £167,990, after transfer of £8,000 to profit and loss account.

ACCIDENT BUSINESS: Premiums, £349; fund, £946.

EMPLOYERS' LIABILITY: Premiums, £31,824; fund (including provision of £16,482 for outstanding claims), £41,886.

GENERAL BUSINESS: Premiums, £14,860; fund, £27,083.

Assets in balance sheet, December 31, 1914, £595,414. These include provision for departmental funds as above shown, profit and loss balance of £9,985, general reserve fund of £11,360, expenses reserve fund of £1,400, and investment reserve fund of £3,099. Out of the profit and loss balance directors recommend payment of interest on paid-up capital at rate of 5 per cent.; also payment to members, and to societies eligible for admission as members, upon the amount of the fire and fidelity premiums received from them in 1913 for insuring their own risks, of a dividend of 2*s.* in the £ to members, and a dividend of 1*s.* in the £ to non-members.

The actuarial valuation of the several branches of the Society's life assurance business for the five years ended on December 31, 1910, was made on a 3 per cent. basis, the tables of mortality employed being the H^M for the ordinary branch and the English Life Table No. III. (Males) for the special and industrial branches. The profit made in the quinquennium was as follows: ordinary branch, £18,192; special branch, £10,788; industrial branch, £2,770; collective branch, £17,180.

COUNTY FIRE OFFICE, LIMITED.

(*See also under* **Alliance Assurance Company, Limited.**)

Head Office: 50 Regent Street, London, W. Founded 1807.

This Company was reconstituted in 1906, under the same title, all policies and contracts being guaranteed by the Alliance Assurance Company, Limited.

DRAPERS' MUTUAL FIRE AND GENERAL INSURANCE CORPORATION, LIMITED.

Head Office: 154–6 Cheapside, London, E.C. Established 1909. Capital authorised, £500,000, in 100,000 shares of £5 each. On December 31, 1914, subscribed, £201,530; paid up (£1 per share), £40,306. The Company was formed by the "Drapers' Chamber of Trade," an important association operating throughout the United Kingdom. All the directors are connected with the drapery trade. Although, however, the Company originated with a particular body, it is open to accept business from any quarter. It transacts insurance on independent lines in the following classes: fire, consequential loss, burglary, accident and sickness, third party, fidelity guarantee, motor-car, plate-glass, and employers' liability, on bonus system giving assured special advantages. For year ending December 31, 1914, net premium income amounted to £37,583, and funds on that date, apart from capital and reserves for outstanding claims, were as follows: reserve for plate-glass bonus, 1914, £1,000; reserves for unexpired risks, £8,280. Total assets, £66,618, including £4,000 in respect of preliminary expenses and £1,524 "establishment and organisation account."

EAGLE INSURANCE COMPANY.

Head Office: 79 Pall Mall, London, S.W. Established 1807. Capital authorised and subscribed, £1,678,675; paid up, £167,867. Amount of each share, £5, with 10*s.* paid up. The shareholders' share of quinquennial profits is limited to one-fifth, with a maximum of £22,000 until the sum of £22,000 shall equal one-tenth of the profits, after which the proprietors' share will be fixed at one-tenth. At the valuation made (on a net premium basis at 3 per cent. interest by the H^M Mortality Table, as on the two preceding occasions) as at December 31, 1912, after applying £13,630 as a specific reserve for

K. TATSUMI, Manager.

early payment of claims, there was a surplus of £14,632, which it was decided to carry forward, no quinquennial bonus being declared. The directors point out that but for the heavy sum of £145,921 written off the life assurance and annuity fund in respect of depreciation there would have been a handsome surplus. The rate of interim dividend to shareholders was fixed at 5 per cent. Price of shares, 4*s*. It was stated in annual report for 1912 that during current quinquennium interim bonuses would be paid, in cases of claims arising under participating policies which had been five years in force, at the rate of the cash bonus declared at December 31, 1907, in respect of each premium paid during the said quinquennium.

The Eagle is an influential Company with a large West-End connection. In 1914 the net new sums assured by life policies amounted to £421,471; total net life premiums to £165,833; consideration for new annuities to £3,316; expenses to 16·5 per cent. of the premiums; claims by death £185,041, by maturity £19,971; life fund at close of year to £1,919,611, and capital redemption funds to £36,999. The net interest yield was £3 19*s*. 5*d*. per cent. Total assets December 31, 1914, £2,316,770.

ECCLESIASTICAL INSURANCE OFFICE, LIMITED.

Head Office: 11 Norfolk Street, Strand, London, W.C. Established 1887. Capital authorised, £1,000,000; subscribed, £250,000; paid up, £25,000. Shares for £10 with £1 paid. Maximum dividend allowable is 5 per cent., which has been steadily paid. Surplus profits are allocated for benefit of clergy and Church purposes. Besides fire insurance the Company transacts employers' liability (in respect of Church workers and domestic servants), burglary, plate-glass and personal accident insurance.

In financial year to February 28, 1915, premiums (increased by £2,423) amounted to £83,210, and losses and expenses to £55,341. Interest produced £11,553, over nine times the amount required for the shareholders' dividend. Out of year's profits a sum of £20,000 was granted to various Church societies. At the close of the year the investment fluctuation fund (increased by £2,500) amounted to £30,000, the fire insurance fund to £165,329, and the employers' liability and other reserve funds to £101,976. Assets amounted to £352,189. Funds, excluding investment fluctuation fund and capital, amounted to more than three times the premium income. Since its establishment £192,480 has been paid over to Church institutions, and the Company well deserves the support of clergy and churchwardens.

The good work done by the Company has been recognised by the Lower Houses of the Convocations of Canterbury and York, which have passed resolutions recommending that ecclesiastical buildings should be insured for the amount which it would cost to replace them in case of their destruction by fire, and appreciative of the advantages of this institution.

PERMANENT SICKNESS AND ACCIDENT INSURANCE

Policies are granted, renewable at the option of the Assured, up to a selected age, not exceeding 65, insuring against loss of income or appointment.

The new "P. and I." Policy provides, in addition to the ordinary weekly benefits, a Capital Sum when incapacity has lasted for 52 consecutive weeks.

Policies are also issued combining Sickness and Accident Insurance with Endowment Assurance, Life Assurance, or a Deferred Annuity.

"Perfected" Sickness and Accident Policies insure payment of Premiums, Income Tax, Rent, and other fixed charges during incapacity.

Actuary and Secretary.

in the life fund, in addition to interest earnings on their own funds.

The second annual valuation was made at close of 1914 on the same strong basis as at the previous quinquennial investigation: O^{M} Mortality Tables for assurances, and 3 per cent. interest. For the annuity contracts the Government tables published in 1912 were adopted as the mortality standard. Stock Exchange securities were valued as far as possible at the latest official quotations, and the investment reserve fund was increased from £60,000 to £107,459, to cover the depreciation shown on this basis and to allow for future depreciation. The proportion of surplus due to policyholders was £39,288, which was sufficient to provide a bonus of £1 per cent. on whole-life and endowment assurances with profits effected after December 31, 1912, and a bonus ranging from 17*s.* to 35*s.* per cent. on whole-life assurances effected prior to that date.

In 1914 the net new sums assured amounted to £384,257; total net premium income to £294,982; expenses, including commission, to about 15·5 per cent. of the premiums; claims by death to £245,023, including £15,315 due to the War (the total amount being well within expectation), and by survivance to £90,873; consideration for new annuities to £11,284; life funds at close of year to £4,309,360. Proprietors' fund, in addition to paid-up capital, £922. Reserve fund, £107,459. Total funds, £4,517,741. Interest yield on total funds after deduction of income tax, about £4 9*s.* 4*d.* per cent.

EMPLOYERS' LIABILITY ASSURANCE CORP., LTD.

Head Office: Hamilton House, Victoria Embankment, London, E.C. Established 1880. Capital authorised and subscribed, £1,000,000, of which paid up £200,000. The shares are for £10, on which £2 is paid up and added. The dividend declared for 1914 was 40 per cent. (16*s.* per share), free of income tax (as for the previous year), earned from interest alone. Price of shares, £14 5*s.*; yield, £6 19*s.* 6*d.* per cent.

This is one of the most important companies of its class, transacting general accident, workmen's compensation, fidelity, and health, &c., and also fire insurance.

The net premium income in 1914 amounted to £1,932,177, showing an increase of £197,210 over that of the previous year, whilst claims and expenses cost £1,665,029. Interest, fees, profits on exchange and investments, &c., produced £85,954. The assets at the close of the year amounted to £2,658,235. Apart from capital the reserves and balance in hand, after provision for dividend, and excluding reserves for outstanding losses and investments, amounted to £1,717,396, representing about 88·8 per cent. of the year's premium income. A valuation of investments was made, based on the prices of June 30, 1914, and the depreciation was more than covered by the investment reserve fund. With its large funds and capital the Company appears to be in an excellent position to attract the best classes of business.

ENGLISH & SCOTTISH LAW LIFE ASSURANCE ASSOC.

Chief Offices: 33 St. James's Square, London, S.W.; 41 Charlotte Square, Edinburgh. Established 1839. Capital authorised and subscribed, £1,000,000; paid up, £70,000. Amount of each share, £50, with £3 10*s.* paid up and added. A dividend of 9*s.* 6*d.* per share, free of income tax, is payable annually during the current quinquennium. Price of shares, £8; yield, £7 11*s.* 6*d.* per cent. The shareholders are entitled to one-tenth of the profits in the life assurance fund and to the whole of the profits from the annuity business. The Company has a strong legal connection, both in England and Scotland, and is well managed.

The last quinquennial valuation was made on December 31, 1910, on a strong basis: for assurances, the O^{M} Table of Mortality, net premiums, and 3 per cent. interest. Reversionary bonuses were declared at the compound rate of 25*s.* per cent. per annum over the last quinquennium, representing in simple reversionary form bonuses varying from 25*s.* to 48*s.* per cent. per annum, according to duration of policies.

In 1914 the net new sums assured by life policies amounted to £395,481; total net life premium income to £232,591; life expenses to about 16·7 per cent. of the premiums; claims by death to £177,610; claims by survivance to £53,461; life fund at close of year to £2,839,918. The annuity fund amounted to £218,273, the general fund to £116,178, and the total assets to £3,319,384. The interest yield on the funds was £4 0*s.* 11*d.* per cent. after deduction of income tax.

EQUITABLE LIFE ASSURANCE SOCIETY.

Head Office: Mansion House Street, London, E.C. Established 1762.

The Equitable is the oldest of the four mutual non-commission-paying British offices. Throughout its unique and splendid career it has played a great part in insurance history, and in this respect the whole world is its debtor, for much of the scientific development of life assurance is due to its initiation. It has yielded magnificent results to its policyholders in the past, and there are now few contemporary institutions that can rival it in bonus-earning capacity.

Distributions of profits in the Equitable used to be made decennially, but are now quinquennial. The third quinquennial valuation was made on December 31, 1914, on the very strong basis employed on the previous occasion: O^{M} Table of Mortality, net premiums, and 2½ per cent. interest. The distribution gives increasing bonuses according to the age of the policies. The bonuses declared on whole-life policies range from 26*s.* per cent. per annum on a policy five years in force to £7 3*s.* per cent. per annum on a policy 55 years in force. With-profit endowment assurance bonuses arising from the 1914 valuation are at the rate of £1 10*s.* per cent. on the sum assured and previously declared bonuses for each complete year during which the policies had been in force since the date of the previous valuation. After writing down the book values of securities by

166 Branches throughout Scotland.

Banking business of every description transacted. Accounts opened for Foreign and Colonial Correspondents. Bills, Cheques and other documents collected. Deposits received at interest repayable at call or at notice.

£337,987 and adding £30,498 to the valuation liability to meet the extra liability in respect of the assured on active war service, the divisible surplus was £831.579, of which £300,000 was carried forward as a general reserve.

What the Society has achieved in the way of bonus may be estimated from the fact that, taking the claims arising during the 100 years ended December 31, 1900, the total additions by way of bonus (including bonuses previously surrendered) more than equalled the original sums assured. In the case of nine claims paid in 1914 the sum assured and declared bonuses actually exceeded three times the original amount assured. In cases of surrendered policies, which in a Company of its bonus attractions are less numerous than usual, the Equitable treats its policyholders with great liberality.

During 1914 the net new life business amounted to £401,053 in sums assured; the total net life premium income to £221,632, in addition to £2,577, sinking-fund premiums, and £23.054 received as consideration for new annuities; the claims by death (including bonus additions) to £299.002, and the total funds at close of year to £5,233,776, consisting of life assurance fund of £4,911,511, sinking fund and capital redemption fund of £22.265, reserve of £300,000 (representing the amount carried forward as undivided profit at the 1914 valuation). The interest yield on the total funds was £4 4*s.* 11*d.* per cent. before deduction of tax, which gives a large profit over the rate assumed for valuation purposes. The expenses—no commission being payable—absorbed only about 7·6 per cent. of the premium income, including valuation expenses.

It is not, perhaps, of great importance to the existing policyholders in this Society that it should do a larger business, but there are not many offices in which new entrants can expect to get as much for their money as they are likely to obtain in "the old Equitable."

EQUITY AND LAW LIFE ASSURANCE SOCIETY.

Head Office: 18 Lincoln's Inn Fields, London, W.C. Established 1844. Capital authorised and subscribed, £1,000,000; paid up, £60,000. Amount of each share, £100; paid up and added to each, £6. Dividend paid in 1914, £1 8*s.* 6*d.* per share. Price of shares, £24 2*s.* 6*d.*; yield, £7 12*s.* 4*d.* per cent. Shares can only be held by members of the legal profession. Shareholders are entitled to one-tenth of valuation profits.

A high-class life office with influential legal connections, which has always yielded good results, both to shareholders and policyholders. It is excellently and economically managed. A quinquennial valuation was made on December 31, 1914, on a strong basis: O^M and $O^{M(5)}$ Tables of Mortality, in combination with net premiums and 2¾ per cent. interest. Reversionary bonuses then declared ranged from 30*s.* to 78*s.* per cent. per annum, according to age at entry and class and duration of policies. The Society issued in November 1915 new tables for non-participating assurances at exceptionally low rates of premium.

In 1914 the net new sums assured by life policies amounted to £443,052, and by policies not relating to life contingencies to £27,793; total net life premium income to £346,349; expenses to about 10·4 per cent. of premiums—a small proportion for a commission-paying office; claims by death (the mortality having been reported as "very favourable," apart from war claims) to £333,210, including £70,000 from war fatalities; and the life fund at close of year, after valuation adjustments, to £4,987,118. Excluding reversions and stock of Law Reversionary Interest Society the invested funds were calculated at close of year to produce £4 9*s.* 3*d.* per cent. per annum, presumably before deduction of tax. In 1910 the Company acquired the assets and goodwill of the National Reversionary Investment Company, Limited, and in 1912 it acquired the business of the Law Reversionary Interest Society, Limited.

ESSEX AND SUFFOLK EQUITABLE INSURANCE SOCIETY, LIMITED.

(*See* Atlas Assurance Company, Limited.)

EXCESS INSURANCE COMPANY, LIMITED.

Head Office: 3–4 Royal Exchange Buildings, London, E.C. Established 1894. Capital authorised and paid up, £50,000, in shares of £1 each fully paid. Dividend for 1914, 10 per cent., and a bonus of 5 per cent. in addition.

The Company undertakes fire, burglary, marine transit, accident, credit and employers' liability insurance. Net premiums, 1914, £573,248. Claims, £483,807. Underwriting balance carried forward, £453,314. Reserve fund, £117,000. Reserve against depreciation, £44,313. Profit and loss balance, after provision for dividend and bonus and adding £33,000 to reserve fund, £1,968. Assets, December 31, 1914, £724,569.

FINE ART AND GENERAL INSURANCE CO., LTD.

Head Office: 89–90 Cheapside, London, E.C. Established 1890. Capital authorised, £500,000, all being subscribed; paid up on December 31, 1914, £50,000. Amount of each share, £10, with £1 paid. Dividend for 1914, 27½ per cent., less income tax, was more than earned from interest, and prospects of maintenance and steady increase seem favourable under normal circumstances. Price of shares, £6 10*s.*; yield, £4 5*s.* per cent.

The Fine Art and General Company transacts fire business on non-tariff lines, as well as burglary, accident, employers' liability and transit insurance. In 1914 in the fire and general account the net premiums amounted to £130,084; interest earnings to £8,358; losses to £77.011; and expenses, inclusive of commission and bad debts, to £43,364, while £16.734 was transferred from this account to profit and loss. The fire and general fund at close of year amounted to £202,034. In the employers' liability account premiums amounted to £55,129, interest to £2,164, losses to £27,627, expenses to £22.867, and the employers' liability fund at end of year to £73,451, including liability for outstanding

DRAWING ACCOUNTS are opened upon the terms usually adopted by other Bankers.

DEPOSIT ACCOUNTS.—Deposits are received from Customers and others, and interest allowed thereon at such rates and for such periods as may be agreed upon reference being had to the state of the Money Market. Deposit Books are issued when required; these are specially convenient for small Deposits.

Copies of the last Report and Annual Balance Sheet of the Bank and List of Branches, also terms and particulars on which the Bank is prepared to act as Executor and Trustee, can be obtained at the Head Office and Branches.

losses estimated at £26,400. The balance of profit and loss account at close of year amounted to £68,449, and after provision for full year's dividend and a grant of £2,500 to the staff provident fund £56,782 remained to be carried forward in this account. On December 31, 1914, the total assets amounted to £481,554. Apart from capital and sums required to meet outstanding liabilities, the funds carried forward together amounted to £305,868, representing about 165 per cent. of the year's premium income in all departments, disclosing a remarkably strong position.

FRIENDS' PROVIDENT INSTITUTION.

Chief Office: 45 Darley Street, Bradford; London Office, 17 Gracechurch Street, London, E.C. Describes itself as "a mutual assurance Association for the Society of Friends and those connected therewith." Founded in 1832. Is one of the most economically managed of life offices employing agents in the United Kingdom, and is specially attractive to those eligible for membership. A new rule as to eligibility adopted in 1915 is as follows:—"The following persons may effect assurances on their own lives or on the lives of any other persons, or any other assurance granted by the Institution:—

"(*a*) Any person who is or has been a member of the religious Society of Friends, commonly called 'Quakers.'

"(*b*) Any person who holds, or at some time has held the same religious profession or persuasion as the members of the said Society.

"(*c*) Any person, corporation or company whom in the opinion of the directors it is desirable to admit as a member of the Institution, having regard to the interests of persons qualified as above mentioned."

As in most "class offices," the incidence of mortality has been specially favourable. The last quinquennial valuation was made on November 20, 1912, on a strong basis, the O^M and $O^{M(5)}$ Tables of Mortality being employed in conjunction with interest at 3 per cent., and the whole net premium loading on an O^M Table basis being reserved for expenses and profit. This basis is more severe than that adopted in 1907, strengthening reserves by about £8,000. The valuation surplus amounted to £324,586, of which £302,149 was treated as divisible, in addition to £3,891 paid as interim bonus during the quinquennium, making a total distribution over the period of £306,040, which is equivalent to an average return of nearly 35 per cent. of the premiums received, notwithstanding the fact that a depreciation of £129,495 in securities was provided for. Reversionary bonuses on whole-of-life policies issued under tables in force prior to the division of surplus in 1902 are calculated in accordance with a scale of participation which increases with each year of age. On policies subsequently issued the profits are allotted on the uniform compound reversionary bonus plan. Ordinary participating policies thereunder receive bonus additions at the compound rate of 32*s.* per cent. per annum over the quinquennium, and endowment assurances thereunder receive compound bonuses of 27*s.* per cent. per annum. These bonuses are higher by 2*s.* per cent. per annum (compound) than were declared five years previously. Interim bonuses on New Series policies becoming claims by death during the current quinquennium are to be provided at 25*s.* per cent. per annum, compound, and endowment assurances becoming claims by survivance will receive the full valuation rate in their section.

In the last financial year, ended November 20, 1914, the net new sums assured amounted to £234,772, of which £224,022 related to life policies and £10,750 to sinking fund assurances. The net life premium income was £182,294 (including single premiums of £7,575), in addition to £8,638 received as consideration for new annuities. The ordinary expenses of the life business were about 11·7 per cent. of the premium income. Claims by death amounted to £147,135, the mortality of the year being described as "well within the expectation." The average age of the Society's policyholders who died in 1914 was 63. The life funds at close of financial year amounted to £3,433,236 (inclusive of investments reserve of £92,126). The interest yield, after deduction of income tax, was £3 19*s.* 2*d.* per cent. Sinking-fund premiums for 1914 amounted to £4,785, and relative fund at end of year to £21,631. Total assets, November 20, 1914, £3,467,999.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION, LIMITED.

Head Offices: Perth, N.B.; Aldwych, London, W.C. Established 1885. Capital authorised, £1,250,000; subscribed as at December 31, 1914, £1,153,000; paid up, £403,000, in 200,000 Ordinary shares of £5 with £1 5*s.* paid up and 153,000 Preference shares of £1 each fully paid. No dividend on the Ordinary shares was declared for 1914. Price of Preference shares, 13*s.* 6*d.*; yield, £7 8*s.* 2*d.* per cent. Price of Ordinary shares, 14*s.* 6*d.*

This Company transacts both fire and accident business in the United Kingdom, accident business in America, and one or other of these descriptions in India, the Colonies, and foreign countries, and also industrial business. It opened a life department in February 1906. The net accident premiums for 1914 (decreased as compared with those for 1913 by £378,039) amounted to £1,335,086, of which £410,902 represented cash collections in the monthly payment and other short-period insurances, under which there is practically no unexpired liability. Losses £817,059, and expenses £554,538. The net fire premiums amounted to £161,525, as compared with £160,483 in the previous year. Claims in connection with fire business are given as £80,521; expenses and other charges, £59,816. Interest and fees produced £36,551. £10,434 was brought forward from the last account, £20,376 transferred to accident and general account, and £19,313 from fire account, and the balance in the profit and loss account for 1914 amounted to £19,987. From this sum £7,631 is appropriated to payment of Preference dividends, leaving £12,356 to be carried forward. On December 31 last the fire fund amounted to £120,277, including £14,178 reserved for outstanding claims; the accident

fund to £834,163, including £502,437 reserved for outstanding claims; the reserve for depreciation of securities to £34,510; and the surplus reserve to £50,000. In the life department policies were issued in 1914 for £133,036 after deduction of reassurances. The life, annuity, and capital redemption funds at close of year amounted to £181,786, the total life premium income having been £35,424. The first quinquennial valuation was made as at December 31, 1910, on the following basis: For assurances, the O^M Table; for annuities, the O^A Table; combined with interest at 3½ per cent. The gross surplus disclosed amounted to £9,173; £8,973 in the life assurance and annuity funds and £200 in the capital redemption fund. Of this the directors resolved to carry forward £1,057 as a special reserve towards the reduction of the valuation rate of interest, and the balance of £8,116 was applied as follows:—£792 (one-tenth of the life profit) and £200 (the capital redemption profit) to profit and loss account, and £7,124 to provide reversionary bonuses of £1 10*s.* per cent. per annum (from the commencement) on "General" policies, £1 per cent. per annum (from the commencement) on "Industrial of South Africa" policies, and 10*s.* per cent. per annum (from date of transfer to the Corporation) on "Life and Health" policies. Total assets in balance sheet, December 31, 1914, £1,849,033.

GENERAL LIFE ASSURANCE COMPANY.

Head Office: 103 Cannon Street, London, E.C. Established 1837. Capital authorised and subscribed, £1,000,000; paid up, £50,000. Amount of each share, £100, with £5 paid. The shareholders are entitled to the profits of the non-participating business and to one-fifth of the profits of the participating business. At the valuation as on December 31, 1912, the shareholders' profits for the quinquennium were sufficient to provide dividends at the rate of 10 per cent. per annum over the ensuing quinquennium, and a dividend at that rate, free of income tax, was declared for 1914. Price of shares, £6 7*s.* 6*d.*; yield, £9 11*s.* 4*d.* per cent.

In 1914 the net new sums assured amounted to £505,755; the total net life premium income to £176,931; expenses to about 20·3 per cent. of the premiums; claims by death to £121,115 (less than "expected" by £32,646), and by survivance to £46,163; and the life fund at close of year to £2,043,319. Net interest yield on life and annuity funds about £3 15*s.* 9*d.* per cent. It is stated in the report that interest at the rate of £3 17*s.* 10*d.* per cent. per annum was realised on the investments as a whole. The investment reserve fund amounted to £133,531, and during the year securities were written down by £3,419. Proprietors' fund, £66,156.

The quinquennial valuation of assurances at close of 1912 was made by O^M and H^M Tables of Mortality, on a net premium basis, at 3 per cent. interest. The surplus ascertained amounted to £86,902. Bonuses in Series 2 of policies (effected subsequently to 1897) were declared in reversionary form at £1 per cent. per annum, "compound," over the quinquennium, and in Series 1 the bonuses were apportioned in accordance with amount of premiums paid.

GRESHAM FIRE & ACCIDENT INSURANCE SOC., LTD.

Head Office: St. Mildred's House, Poultry, London, E.C. Established June 1910. Authorised capital, £500,000; issued capital, £200,000, in 100,000 Management shares (held by the Gresham Life Assurance Society) of £1 fully paid, and 200,000 Ordinary shares of £1 each with 10*s.* paid. 100,000 Management shares and 100,000 Ordinary shares of £1 each are authorised, but as yet unissued. The Society is distinct from the "Gresham Life," but has the same directorate. The accounts for the 17 months to December 31, 1914, show a fire premium income of £63,846, employers' liability, accident and general premium income of £70,240, and assets of £285,239, inclusive of preliminary expenses, £6,453, and establishment of business account, £56,362, and a debit balance of £35,793 in profit and loss account.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

Head Office: St. Mildred's House, Poultry, London, E.C. Established 1848. Capital authorised and subscribed, £100,000; paid up, £22,378. Amount of each share, £5; 1,736 shares being fully paid and 18,264 having 15*s.* paid. Dividend paid in 1914 by way of interest was 5 per cent. Price of fully paid shares, £8 10*s.*; price of partly paid shares, £3 10*s.* A quinquennial life bonus of 31*s.* 6*d.* per share was paid in May 1911. The shareholders are entitled to one-tenth of the divisible valuation profits.

The Gresham has throughout its entire history been a very enterprising Company, and has a large foreign business. The quinquennial valuation at the close of 1910 was made as regards assurances by the H^M Table, in combination with 3½ per cent. interest and net premiums, after giving effect to expenses of the first year of assurance. Annuities were valued by the Government Annuity Tables of 1882, also at 3½ per cent. interest. The surplus amounted to £372,705, of which £315,000 was divided.

In 1914 the net new life assurances amounted to £1,763,407; the total net life premium income to £1,022,817; expenses of the life business to 22·0 per cent. of the premium income; claims by death (within the actuarial estimate) to £422,573, and by survivance to £610,117; consideration for annuities granted to £37,069; and the life and annuity funds at close of year to £10,309,986, exclusive of investment reserve fund of £120,000. Leasehold premiums, £3,681; fund, £21,058. The interest yield on the funds was £4 3*s.* 5*d.* per cent. after deduction of income tax.

GUARANTEE SOCIETY, LIMITED.

(*See* **Yorkshire Insurance Company, Limited.**)

GUARDIAN ASSURANCE COMPANY, LIMITED.

Head Office: 11 Lombard Street, London, E.C. Established 1821. Capital authorised and subscribed, £2,000,000; paid up, £1,000,000. Amount of each share, £10, with £5 paid. Dividend paid for 1914 was 10*s.* per share, free of income tax, and prospects for its maintenance seem favourable, for only a small profit on the large turnover in the fire department is required

Every description of Banking Business transacted. Foreign Exchange. Trustee and Executorships. Savings Bank Department

for that purpose, in addition to interest earnings and the profits from the life department. The shareholders are entitled to one-fifth of the divisible life profits. Price of shares, £7 16*s.* 3*d.*; yield, £7 15*s.* per cent. This strong and influential Company transacts fire, life, burglary, fidelity, accident and other miscellaneous insurance business. The Company does not transact business in the United States, and was, consequently, not affected by the San Francisco disaster.

FIRE DEPARTMENT.—In 1914 the net fire premiums amounted to £595,315; the losses to £362,835; and the expenses and charges to £219,461. The surplus transferred to profit and loss account in 1914, including £31,648 received from interest on the fire funds, was £38,506. Securities were written down by £28,935, and there was an investment reserve fund of £22,000 at the end of the year. The fire insurance fund (exclusive of investment reserve) at close of year amounted to £825,250, or to about 138 per cent. of the year's premiums, indicating great financial strength.

LIFE DEPARTMENT.—A quinquennial valuation was made on December 31, 1914, on a strong basis: for assurances, O^M Table of Mortality, net premiums, and 3 per cent. interest. Bonuses to policyholders were at reversionary rates varying from about 21*s.* per cent. per annum to much larger amounts, according to age at entry and duration of policies. In 1906 the Company acquired the business of the Westminster and General Life Assurance Association.

In 1914 the net new sums assured amounted to £479,548. Exclusive of the "Westminster" life account, the total net life premium income amounted to £275,194; expenses to about 15·4 per cent. of the premiums; claims by death (below "expectation") to £227,114, and by survivance to £37,756; and the life fund at close of year (exclusive of investment reserve fund of £100,000) to £3,602,707. The interest yield was about £4 2*s.* 5*d.* per cent. after deduction of income tax.

ACCIDENT DEPARTMENT.—The accident department seems in a strong position, the fund, after transferring £29,555 to profit and loss account, having amounted at close of 1914 to £207,394, as compared with a premium income of £201,460. Since 1908 the Company has included among its operations the insurance of plate glass, in connection with which it acquired the business of two companies which exclusively undertook that class of risk.

In 1909 the Company acquired the fidelity guarantee business of the Law Guarantee and Trust Society, the cost of purchase being charged to profit and loss account.

GENERALLY.—After provision for dividend and writing £45,286 off for depreciation in securities the balance in profit and loss account at end of 1914 was £89,777. The "Westminster" life premiums amounted to £36,188, and the relative fund at close of 1914 to £707,427, excluding investment reserve fund of £27,000. Total assets of Company, £7,370,442.

HEARTS OF OAK LIFE & GENERAL ASSURANCE CO., LD.

Head Office: 40–44 Holborn Viaduct, London, E.C. Established 1903. Transacts life and industrial, fire, employers' liability and miscellaneous insurance. Capital, December 31, 1914: Nominal, £150,000, in shares of £1 each; issued, 120,075 shares with 12*s.* 6*d.* paid and 1,500 shares with £1 paid; forfeited, 338 shares with 10*s.* paid; paid in advance of calls, £6,685. Five per Cent. Debentures, £8,000.

Premium income, 18 months to December 31, 1914: Life, £11,893; industrial, £56,924; fire, £11,073; personal accident, £457; employers' liability, £3,214; plate-glass and miscellaneous, £4,502. Life assurance fund, £18,866; industrial fund, £20,962; fire fund, £2,959; personal accident fund, £116; employers' liability fund, £782; plate-glass, &c. fund, £1,023. Assets, £150,241, include "establishment and extension of business account," £89,965, and "debit balance of profit and loss, £25,595."

HIBERNIAN FIRE AND GENERAL INSURANCE CO., LTD

Head Office: 49 Dame Street, Dublin. Established 1908. Capital authorised, £200,000; subscribed, £106,000; paid up, £21,200. in shares of £1 with 4*s.* paid. Dividend for 1914, 5 per cent., free of income tax.

For the year ending December 31, 1914, net premiums amounted to £15,680, and earnings from interest and fees to £962; whilst claims were £4,703, and expenses £6,764. After writing off £470 for various purposes and provision for dividend, a balance of £4,219 was carried forward to 1915. Fire insurance fund, £5,327. Assets, December 31, 1914, £41,078, include preliminary and organisation expenses, £782.

HORSE, CARRIAGE & GENERAL INSURANCE CO., LTD.

Head Office: 21 Ironmonger Lane, London, E.C. Established 1868. Capital authorised, £1,000,000; subscribed, £50,000, in shares of £5; 800 shares are fully paid, on 2,974 shares the amount paid is £2 10*s.*, and on 6,226 shares issued in 1907 (at a premium of 10*s.* per share) £1 per share was paid up on December 31, 1914, at which date the paid-up capital accordingly amounted to £17,661. Dividend for year, 12 per cent., free of income tax.

In the revenue account of 1914 net premiums amounted to £78,736; interest, less tax and bad debts, to £2,050; claims to £43,230; expenses, inclusive of commission, to £31,012, and balance to profit and loss, £3,592. After taking into account balance brought forward from last year, and after provision for dividend, a balance is carried forward of £2,419. The additional reserves amount to £49,279. Assets on December 31, 1914, £79,072.

Every description of banking business transacted, including the purchase and sale of Stocks, Shares, Securities, &c.; the collection of Dividends and Coupons whether payable in Great Britain or abroad; the issue of Drafts, Letters of Credit, and Circular Notes payable in the principal Cities and Towns throughout the World; and Cable transfer of remittances to all parts.

The Agency of Colonial and Foreign Banks is undertaken, and the Acceptances of Customers residing in the Colonies or elsewhere abroad domiciled in London are retired on terms which will be furnished on application.

The Officers of the Bank are bound to secrecy as regards the transactions of its customers.

account amounting to £440,640, underwriting suspense account £113,239, building reserve account £5,000, investment depreciation account £50,000, and balance of profit and loss account, after provision for half-year's dividend payable in February 1915, of £83,233. The earnings from interest and fees amounted in 1914 to £44,503, and the trading profit on the winding-up of the 1913 underwriting account at the close of 1914, after transferring £60,000 to underwriting suspense account, was £90,025. The net premium income in 1914 was £617,734, of which first year's settlements absorbed 25 per cent. The assets on December 31, 1914, amounted to £1,377,127.

IRON TRADES EMPLOYERS' INSURANCE ASSOC., LTD.

Head Office: 82 Victoria Street, London, S.W. Founded 1898. This is practically a mutual office, the capital being limited by guarantee, every member in event of winding-up being liable for £1. The business is limited to employers' and public liability insurance.

In 1914 premiums amounted to £306,095. Compensation paid and provided in that year, inclusive of incidental expenses, £228,940. After providing for outstanding claims, balance on revenue account amounted to £77,932 from which £30,000 was transferred to reserve fund (thereafter £135,000) and £13,500 to investment reserve fund. Bonuses of 10 per cent. on premiums to members entitled thereto were declared. Assets, December 31, 1914, £391,805, being certified as fully of value stated in balance sheet, after taking investment reserve fund into account.

ITINERANT METHODIST PREACHERS' ANNUITANT SOCIETY.

Founded 1798. Office: 24 Bishopsgate, London, E.C. Secretary, Rev. Jabez Parkyn, Wesley House, Bury St. Edmunds.

During the year ended February 28, 1915, premiums of £11,407 were received and annuities of £23,797 were paid. Fund at that date, £385,188.

Subscriptions of members, £6 each, and of probationers £5 5*s.* each annually. Marriage fees, according to scale, from 2½ to 15 guineas, with an additional premium in certain cases. An annuity is provided whenever through ill-health a minister is declared a supernumerary, whether temporarily or permanently, and during payment of an annuity no subscription is charged. Annuities vary in amount according to years of work, and (less one-eighth) are paid to widows. Payments are made in special cases to ministers' orphan children. The number of annuitants on February 10, 1915, was 880, 464 being supernumeraries and 416 being widows.

LAW ACCIDENT INSURANCE SOCIETY (1907), LTD.

The business of this Company is included in the accounts of the London and Lancashire Fire Company (*q.v.*).

LAW FIRE INSURANCE SOCIETY.

(*See* **Alliance Assurance Company, Limited.**)

LAW INTEGRITY INSURANCE COMPANY, LIMITED.

Head Office: Church Street, Liverpool. Registered 1906. Nominal capital, £100,000; issued capital, £16,524, of which £15,482 was paid up on June 30, 1915, in 1,000 Preference shares of £1 each, fully paid, and 15,524 Ordinary shares of £1 each upon which various amounts have been paid. Dividends at rate of 5 per cent. on capital paid up in each year were paid in respect of 1908-09, 1909-10, and 1910–11; but no dividend was paid for 1911–12, "in consequence of arrangements having been completed for making the statutory deposit of £20,000 with the Paymaster-General to enable the Company to transact life business." For each of the years ended June 30, 1913 and 1914, a dividend of 2½ per cent. was paid. No dividend was declared in respect of the year ended June 30, 1915.

The report for year ended June 30, 1915, shows a premium income of £58,026, which includes life, £2,421, and industrial life, £52,425. Assurance funds, June 30, 1915, £39,789 (industrial life, £38,469; life, £965; sickness and accident, £223; fidelity guarantee, £72; fire, £60). Profit and loss balance, £956. Assets, £57,525, including "establishment account, £25,099."

LAW LIFE ASSURANCE SOCIETY.

(*See* **Phœnix Assurance Company, Limited.**)

LAW UNION AND ROCK INSURANCE CO., LTD.

Head Office: Old Serjeants' Inn, Chancery Lane, London, W.C. Established as the "Law Union Fire and Life Insurance Company," 1854; name changed in 1892 to "Law Union and Crown Fire and Life Insurance Company," in 1898 to "Law Union and Crown Insurance Company," and in 1909, on absorption of the Rock Life Assurance Company, to the above. Capital authorised, £2,000,000; subscribed, £1,575,000; paid up, £165,000, in 150,000 shares of £10 each, on which 12*s.* is paid, and 75,000 fully-paid shares of £1. There is an issue of Four per Cent. Debenture stock, of which £251,726 was outstanding on December 31, 1914. This stock was issued to the shareholders of the Crown Life Assurance Company, is secured as a first charge on the profits of the Company applicable to the payment of dividends, and is redeemable on December 31, 1942, at par. Dividend declared in 1915, for the current year, at 8*s.* per share, less income tax. Price of partly paid shares, £5; yield, £8 6*s.* 8*d.* per cent.; price of fully paid shares, £6 5*s.*; yield, £6 12*s.* 3*d.* per cent.

Fire Department.—In 1914 the fire premiums amounted to £246,001; claims to £117,060 (47·6 per cent.); and expenses to £94,362 (38·3 per cent.). The surplus on the fire operations of the year, amounting to £44,071, to which interest contributed £11,888, was transferred to profit and loss account, £200,000 was maintained in the fire account as a general fire reserve, while the premium reserve for unexpired risks amounted to £98,400.

Life Department.—In 1914 the net new sums assured amounted to £1,239,370; the total net premium income to £590,591; consideration received for new annuities to £12,618; claims by death to £500,925 (described as "within the expectation"), and by survivance, £83,818; and expenses, including commission, to about 15·2 per cent. of premiums. Total

life assurance funds of the Company on December 31, 1914, were £7,984,516. Net rate of interest realised, £4 6*s.* 2*d.* per cent. after deduction of income tax.

A quinquennial valuation of the life department and of the Crown and Rock funds was made at December 31, 1914. The Law Union and Rock policies were valued by the O^M Tables of Mortality, net premiums, and 3 per cent. interest. In this section the whole of the divisible profits go to the policyholders, less a sum not exceeding 5 per cent. of the premiums received during the valuation period. The Crown policies were valued by the H^M Tables at 3½ per cent., a rate assumed since the series is being wound up, regard being had to the fact that more than 4 per cent. was earned on the fund during the quinquennium. Participating Crown policyholders take two-thirds of profits in cases of policies issued prior to 1860, and five-sixths of profits in cases of later policies. The Rock policies were valued on the $O^{M(5)}$ Table with 3 and 3½ per cent. interest. On Law Union and Rock policies bonuses were at the satisfactory compound rate of 30*s.* per cent. per annum, giving large reversionary additions, especially in the case of policies of long standing.

Employers' Liability Department.—Premiums (1914), £35,903. Fund at close of year (after transfer of £10,240 to "profit and loss"), £31,152, including £16,790, estimated liability for outstanding claims.

Accident Department.—Premiums (1914), £16,272; claims, £5,347; expenses, £5,248; transfer to profit and loss account, £4,811; accident fund at close of year, £9,425, including £2,916 in respect of outstanding claims.

General Account.—Premiums, £35,436; transfer to profit and loss, £5,662; fund, £21,325, including £7,150 for outstanding claims.

Fixed-term Premiums in 1914 amounted to £13,221, transfer to profit and loss £10,470, fund at close of year to £273,744.

Profit and Loss Account.—The balance of this account at close of 1914 was £263,194. The Company's assets amounted to £9,739,637, and the report states that the investment reserve funds are sufficient to reduce the values placed on the Stock Exchange securities to the estimated prices of December 31, 1914.

LEGAL AND GENERAL LIFE ASSURANCE SOCIETY.

Head Office: 10 Fleet Street, London, E.C. Established 1836. Capital authorised and subscribed, £1,000,000; paid up, £160,000. Amount of each share, £50; paid up and added to each, £8. Shares can only be held by members of the legal profession. Shareholders are entitled to one-tenth of the divisible surplus arising from the quinquennial valuations. Their annual dividends for the years 1912 to 1916 inclusive are £1 4*s.* per share, free of income tax. Price of shares, £17 10*s.*; yield, £8 11*s.* 4*d.* per cent.

The Legal and General Life Office is one of the strongest and most enterprising in the country, and is very attractive to new entrants. It has a very powerful legal board and a most influential connection. Its new business of late years has been increasing by leaps and bounds. Its policies are models of simplicity. Its bonuses are amongst the best declared by British life offices. Its reserves are on a most conservative basis. The valuation of assurances at December 31, 1911, was made by the O^M Table of Mortality, in combination with 2½ per cent. interest. The premiums valued were in the with-profit class 82 per cent., and in the non-profit class 90 per cent. of the actual premiums payable. The reversionary bonuses declared were, as on the last three preceding quinquennial occasions, at the rate of 38*s.* per cent., on the compound system—excellent in the case of young policies and exceptionally high in that of policies of long duration.

In 1914 the net new sums assured amounted to £2,736,063. Of this sum, £2,660,492 represented purely life business, and the balance sinking-fund and other kinds of policies. The total net premium income, increased in 1914 by £69,824, amounted to £1,055,820, about one-seventh of this sum representing premiums on new assurances. Consideration for annuities granted yielded £96,745. Expenses in the life business absorbed about 11·3 per cent. of the total premiums, a very small proportion considering the vast extent of the new business. This is making no allowance for the cost of management of the considerable annuity business. The net claims on the life fund amounted to £548,369, including endowment policies. The incidence of mortality in the last quinquennium was favourable, the amount of the death claims having been 13 per cent. less than "expectation." The total assets at close of year amounted to £10,658,920. The aggregate book value of Stock Exchange securities exceeded the estimated market value at December 31, 1914, after allowing for the investment reserve fund and unappropriated profit, by about 4 per cent. It is reported that, excluding the amounts invested in the purchase of reversionary interests, the remainder of the Society's assets, productive and unproductive, yielded an average rate of £4 10*s.* 3*d.* per cent. before deduction of income tax, giving a very large margin over the valuation rate.

LEGAL INSURANCE COMPANY, LTD.

Head Office: 231–2 Strand, London, W.C. Established 1907. Capital authorised, £1,000,000; subscribed, £500,000; paid up, £100,000, in shares of £5 with £1 paid.

The Company transacts fire and accident business, and has an influential board, all the members of which belong to the legal profession. It took over that portion of the business of the Profits and Income Insurance Company, Limited, relating to consequential fire losses. The net premiums in 1914 amounted to £200,046. At the close of the year the balance of revenue account, subject to liability for unexpired risks, amounted to £43,111. Total assets, December 31, 1914, £236,538, include the following item: purchase of goodwill of Profits department, £35,000.

LETTERS PATENT INSURANCE COMPANY, LIMITED.

Head Office: 61 Lincoln's Inn Fields, W.C.

Prospectus of this Company was issued in June 1912. The capital proposed amounted to £250,000, in 125,000 Six per Cent. Cumulative Participating Preference shares

of £1 each, 2,000 Six per Cent. Cumulative Participating Preference shares of £50 each, and 500,000 Ordinary shares of 1*s.* each. Subscriptions were invited for all the Preference shares and for 225,000 Ordinary shares, it being proposed to allot 275,000 Ordinary shares to vendors as part of the purchase price.

The special business particularly proposed to be undertaken was the insurance of liability of patentees, guarantee of patents, and assurance of lives of patentees.

No accounts of this Company have yet reached us, although repeated applications for information have been made to the Secretary.

LICENSES INSURANCE CORPORATION AND GUARANTEE FUND, LIMITED.

Head Office: 24 Moorgate Street, London, E.C. Established 1890. Capital authorised, £1,000,000. On December 31, 1914, subscribed, £144,060, of which paid up £73,850 (£3,640 being in fully-paid Founders' shares). Amount of each share, £10; £5 paid up on Ordinary shares. Dividend on Ordinary capital for year 1914 was at rate of 8 per cent., free of income tax.

The Company occupies a useful sphere of its own in the insurance world, its main object being the insurance from year to year of the renewal of licences in connection with licensed property. The net premium income in 1914 was £139,906. Claims and expenses amounted to £105,119. Interest and fees produced £8,888. At close of year, after provision for dividend, general reserves and balances (apart from reserves for claims in suspense and contingencies, depreciation in investments, and for doubtful debts) amounted to £115,139, or to about 82·7 per cent. of the year's premium income. The amount of the assets, according to the balance sheet on December 31, 1914, was £306,134, the directors certifying that in their belief the assets were in the aggregate fully of the value stated, less the reserve for depreciation, which amounted to £50,848. In arriving at this conclusion the Stock Exchange securities were valued at the middle market price on December 31, 1913, less accrued interest.

LIFE ASSOCIATION OF SCOTLAND.

Chief Office: 82 Princes Street, Edinburgh; London Office: 28 Bishopsgate, E.C. Established 1838. Capital authorised and subscribed, £400,000; paid up, £87,500. Shares for £40, upon each of which £8 15*s.* has been paid and added. Dividend paid in 1915, £1 3*s.* 6*d.*, subject to deduction of income tax. Price of shares, £20; yield, £6 0*s.* 5*d.* per cent.

The last quinquennial valuation was made on April 5, 1911, by the O^M Table, in combination with net premiums and interest at 3 per cent. Surplus amounted to £402,757, of which £377,745 was divided, £339,971 being allocated to policyholders. Reversionary bonuses were at the rate of 30*s.* per cent. per annum on both whole-life and endowment assurances, under Class A^3 series of policies.

In financial year ending April 5, 1915, the net new sums assured, all within the United Kingdom, amounted to £487,408; the total net life premium income to £355,246; consideration for annuities granted, £15,772; claims by death, £371,836, the amount of death claims being less than the "expectation"; expenses, about 15·8 per cent. of the premiums; and the life assurance and annuity fund at close of year £5,928,675, in addition to investment reserve fund of £100,000. The interest yield, after deduction of income tax, amounted to £3 18*s.* 9*d.* per cent.

LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

Chief Office: 1 Dale Street, Liverpool; London Office: 1 Cornhill, E.C. Established 1836. Capital authorised, £3,000,000; subscribed on December 31, 1914, £2,655,250; paid up, £265,525. Shares are for £10 each, of which £1 is paid up. There were also on same date an issue of £805,800 Four per Cent. Perpetual Debenture stock and an issue of £450,696 Four per Cent Thames and Mersey Debenture stock. Dividend declared in 1915 was 24*s.* per share (less income tax). Price of shares, £19; yield, £6 6*s.* 4*d.* per cent.

The Liverpool and London and Globe Company transacts fire, life, marine, and accident business. The business of the Central Insurance Company, Limited, was acquired as from December 31, 1906, and that of the Thames and Mersey Marine Insurance Company, Limited, in 1911.

Fire Department.—The Company's operations in this department are world-wide in scope. In 1914 the Company's total net fire premiums amounted to £3,098,721, losses to £1,888,743 (60·9 per cent.), and expenses to £1,141,960. After transferring £172,141 to profit and loss account the fire fund amounted to £2,239,488.

Life Department.—Life policyholders are treated in this Company with great liberality, the expenses of this department being strictly limited to 10 per cent. of the premiums. Bonuses have hitherto been declared on a high scale. Participating policyholders are entitled to nine-tenths of the divisible surplus in their section. At close of 1913 the quinquennial valuation on a strong basis (O^M and $O^{M(5)}$ Mortality Tables for assurances, net premiums, and $2\frac{3}{4}$ per cent. interest), produced reversionary bonuses of 35*s.* per cent. per annum, after providing £50,000 towards the investment fluctuation fund. This rate of bonus has been declared since the opening of the participating section in 1875, and its maintenance is particularly satisfactory looking to the increased stringency of the valuation through the reduction in the rate of interest assumed. In 1914 the net new sums assured amounted to £538,654, the net life premium income to £286,674, the claims to £231,517, and the life and annuity funds at close of year to £4,953,406. Interest on the life funds yielded about £3 15*s.* 7*d.* per cent. after deduction of income tax.

Accident Department.—The personal accident account for 1914 shows a premium income of £136,336, and after providing for claims and expenses, and inclusive of interest earnings of £3,208, and after adjustment of provision for unexpired risks, £12,194 was transferred to profit and loss account. Reserve at end of year amounted to £71,576, exclusive of £16,425 set aside for outstanding claims.

MUNICIPAL MUTUAL INSURANCE, LIMITED

(ASSOCIATED LOCAL GOVERNMENT AUTHORITIES)

Is the IDEAL System of Insurance for all Public Authorities.

BECAUSE . . .

An immediate Saving is effected in Premiums. The Large Profits made belong to the Policyholders.
The Accumulated Funds belong to the Fire Policyholders, but no liability is incurred.
Only Public Authorities are eligible for these benefits. The Association is purely municipal in character.

Annual Revenue exceeds £24,000
Reduction in Premiums made to Fire Policyholders exceeds £14,006

The Funds, Resources and Revenues of the Company and its Guarantors exceed

£5,000,000.

16 and 17 FINSBURY SQUARE, LONDON, E.C.

The premium income from EMPLOYERS' LIABILITY business within the United Kingdom amounted to £128,794. After payment of claims and expenses and adjustment of provision for unexpired risks £20,407 (including £3,262 interest) was carried to profit and loss account. The relative fund at close of year amounted to £77,276, exclusive of £57,978 provided for outstanding claims.

The MISCELLANEOUS INSURANCE ACCOUNT shows premiums of £853,615, whilst claims and expenses absorbed £728,323, and after adjustment of reserve for unexpired risks £33,315 (including £18,180 interest) was transferred to profit and loss account. At the end of the year the funds amounted to £491,446, apart from £217,603 provided for outstanding claims.

LEASEHOLD REDEMPTION ACCOUNT.—Premiums in 1914, £1,414; fund at close of year, £4,184.

MARINE DEPARTMENT.—Premiums, 1914, £337,017. The account after providing for claims, £246,778, and expenses, shows, with the addition of interest earnings of £15,902, a surplus of £74,980, of which £11,128 has been left in the marine account to increase the reserves, and the balance of £63,852 transferred to profit and loss account. Marine fund at close of year, £391,047.

GENERALLY.—Profit and loss account in 1914 showed a balance brought forward from 1913, after provision for balance dividend for that year, of £868,869. Transfers in 1914 from other departments, including instalment of £19,914 from the shareholders' life valuation profits of 1908, amounted to £321,823. Interest not carried to other accounts, after deduction of interest paid on Debenture stock and of various debits charged to profit and loss account, amounted to £74,773, giving a total surplus of £396,596. Adding to this the balance of profit and loss brought forward from 1914, the disposable balance was £1,265,465. Out of this £73,932 was transferred to investment fluctuation fund, £15,000 to staff pension fund (thereafter amounting to £79,551), while the dividend for 1914 required £294,069. The balance carried forward in profit and loss account to 1915 thereafter is £882,465.

The general reserve (£1,000,000) and fire reserve funds amount to £3,239,488, and the balance and funds referred to (together £4,121,953) exceed last year's fire premium income by over 33 per cent., disclosing a very strong financial position. The Company's total assets amounted at close of 1914 to £14,146,852. The balance sheet includes the figures relating to other insurance companies owned and controlled by the Company, and the auditors certify that in their belief the assets were in the aggregate fully of the value stated therein, after deducting the amount (£755,000) set aside in investment fluctuation fund.

LIVERPOOL MORTGAGE INSURANCE COMPANY, LTD.

Head Office: 6 Castle Street, Liverpool. Established 1887. Capital subscribed, £250,000; paid up, £100,000, in shares of £10 with £4 paid on each.

In 1914 the premiums amounted to £6,513, and the earnings from interest and fees, less tax, to £2,700. Claims, £1,213. Expenses, £1,998. It is announced in the annual report for this year that the suspense account against provision for losses was strengthened by the addition of a further sum of £6,000, and thereafter stood at £34,380. The balance carried forward to 1915 in profit and loss account amounts to £3,588. Assets, December 31, 1914, £222,002.

LIVERPOOL VICTORIA INSURANCE CORP., LTD.

(In Liquidation.)

Registered Office: 14 Queen Victoria Street, London, E.C. Established 1907. On May 29, 1915, capital subscribed, £421,408; paid up, £125,352, in shares of £1, 200,000 having 2*s.* 6*d.* paid, 161,408 having 5*s.* paid, and 60,000 being fully paid.

This Company, which transacted life, fire, accident and miscellaneous insurance business, is now in liquidation.

Telegraphic Address, "ELMFIELD STOCK, LONDON."

Current Accounts opened in London on terms usual among London Bankers.

Deposit Receipts issued and Deposit Accounts opened in London, interest being allowed thereon at rates as advertised from time to time.

At the Country Branches, Current and Deposit Accounts opened, Deposit Receipts and Drafts issued, and all other Banking Business transacted on the usual terms.

Dividends and Coupons collected. Investments in and Sales of Home and Foreign Securities effected. Moneys received and advised for customers free of charge between all the offices.

The Bank has Agents throughout the United Kingdom, to whom credits can be paid by or on behalf of its customers for transmission.

The Agency of Foreign, Colonial and Country Banks is undertaken.

The Bank is prepared to undertake the duties relating to Executorships, Trusteeships, &c.

The Officers of the Bank are bound to secrecy.

FOREIGN DEPARTMENT.—The Bank issues Drafts, Circular Letters of Credit and Circular Notes payable in all parts of the World; effects Mail and Cable Transfers; collects Foreign Bills and Bonds; purchases approved Foreign Bills and Coupons payable abroad; receives Foreign Bonds and Scrips for registration; makes arrangements abroad for receiving moneys for its customers, and undertakes generally all Foreign Exchange Business.

It was announced in May 1912 that, under a working agreement between this Corporation and the Commercial Union Insurance Company, the latter guarantees all life policies issued by the Liverpool Victoria, and all fire and accident policies issued or renewed in the United Kingdom after the date of the agreement. It was stated in the annual report for year ending March 31, 1913, that a valuation of the life policies was made by the O^M Table (excluding the first year of assurance) for the quinquennium ended December, 31, 1912, the rate of interest employed being 3½ per cent., except for sinking-fund contracts and deferred assurances, for which the rate assumed was 3 per cent. The valuation showed a deficiency of £3,352, and it was stated that assets to that extent had since been transferred to the life fund.

The balance sheet of the Company, in liquidation, on May 29, 1915, shows a total deficiency in the statement of assets as compared with liabilities (paid-up capital of £125,352 being included amongst such liabilities) amounting to £167,074.

LONDON AND LANCASHIRE FIRE INSURANCE CO., LTD.

Chief Offices: 45 Dale Street, Liverpool; 155 Leadenhall Street, London, E.C. Established 1862. On December 31, 1914, capital authorised, £3,000,000; subscribed, £2,641,250; paid up, £264,125, in 105,650 shares of £25 each with £2 10*s.* paid. During 1907 the Company acquired the business, assets and liabilities of the Law Accident Insurance Society, Limited, and the Standard Marine Insurance Company, Limited. The Company acquired in 1909 a controlling interest in the Australian Alliance Assurance Company of Melbourne. At an extraordinary general meeting on April 25, 1912, it was resolved that the Company be registered as a limited liability Company, with power to transact other (including life) insurance business if and when considered desirable.

Dividend for 1914, 29*s.* per share, less income tax. Price of shares, £25 7*s.* 6*d.*; yield, £5 15*s.* 5*d.* per cent.

Fire Department.—The fire premiums amounted in 1914 to £1,655,713, and the losses (£918,633) and expenses (including taxes, £591,755) to £1,510,388. Interest earnings on the fire fund produced £29,837, and the sum of £98,661 was transferred from the fire account to profit and loss, the departmental fire fund thereafter (increased by £76,500) amounting to £862,500 at close of year.

Accident and General Department.—The premiums (increased by £224,677) amounted to £908,074; losses (£385,181) and expenses, inclusive of commission and taxes (£347,482), together amounted to £732,663. Interest produced £16,048, and, after transferring £101,459 to profit and loss account, the accident fund was increased by £90,000 to £463,500.

Marine Department.—Net marine premiums, increased by £16,886, amounted to £235,256, and departmental interest earnings to £7,373; net losses to £180,849, and departmental expenses, including taxes, to £21,414. The sum of £33,366 was transferred to profit and loss account, and the marine fund at end of year, increased by £7,000, amounted to £194,500.

After adjusting reserves for unexpired risks in the various funds, the profits in the year 1914, exclusive of interest earnings on profit and loss account, less expenses charged to that account, seem to have aggregated £362,587. The amount required for distribution of the dividend was £141,384. £110,000 was written off investments, £10,000 was added to the staff pension fund, and the balance carried forward in profit and loss account was £847,666, after increasing the funds as above stated, as compared with £846,463 at close of 1913.

On December 31, 1914, the funds, after provision for dividend, in addition to paid-up capital of £264,125, amounted to £3,466,343 (reserve fund, £1,000,000; fire fund, £862,500; accident fund, £463,500; marine fund, £194,500; staff pension fund, £98,177; balance, £847,666). The assets on December 31, 1914, amounted to £4,923,121, and the aggregate market value of the

LONDON AND LANCASHIRE LIFE AND GENERAL ASSURANCE ASSOCIATION, LIMITED.

Head Office: 66 and 67 Cornhill, London, E.C. Established 1862. Capital authorised, £350,000; subscribed, £333,825; paid up, £66,765. Shares of £5, with £1 paid. Dividend and bonus for 1913 together amount to 3*s.* per share, free of income tax. Price of shares, £2; yield, £9 9*s.* 1*d.* per cent. Shareholders are entitled to one-fifth of the profits made on the life fund in respect of policies effected before January 1, 1898, and to one-tenth of the profits in respect of other policies.

In accordance with resolutions passed at special meetings of shareholders, the Association was registered in 1910 as a limited Company, and obtained the sanction of the High Court to alteration in the memorandum and articles of association empowering the Association to carry on every description of insurance business (other than marine insurance).

An agreement was entered into on August 1, 1912, with the Scottish Metropolitan Assurance Company, Limited, for the purchase of the shares of that Company by the London and Lancashire Life, &c., Association, and the combined figures of both companies are given in the accounts.

LIFE DEPARTMENT.—The valuation on December 31, 1912, was made by the H^{M} Mortality Tables, with 3½ per cent. interest, with the exception of participating policies effected since 1907, which were valued on the more stringent basis of the O^{M} Table with 3 per cent. interest. Annuities were valued by the British Offices' Annuity Tables with 3½ per cent. interest. A net surplus of £140,086 was disclosed, after applying £57,992 to strengthening the valuation basis, of which £5,000 was applied in increasing the investment reserve and £4,212 carried forward. On the balance of £130,874 the first charge is the cumulative dividend of 5 per cent. per annum to shareholders, amounting to £9,476, leaving £121,398 as the divisible surplus. Of this £18,641 was the shareholders' proportion, on account of which £17,044 had been paid to them during the quinquennium. The policyholders' proportion was £102,757, less £11,221 previously distributed as interim bonus, leaving £91,536 for further distribution. £50,851 was divided amongst participating policyholders in the form of a reversionary bonus of 10*s.* per cent. per annum for each full year's premium paid in the quinquennium, this bonus being increased to 11*s.* 3*d.* for policies effected since December 31, 1897. The balance of £40,685 was carried to the bonus reserve fund of the contingent profit series of the Association's business, increasing this fund to £81,158.

The Company operates in its life department in Canada, as well as in the United Kingdom, and prior to 1908 did a considerable new business in India. In 1914 the net new sums assured amounted to £767,733; the total net life premium income to £399,761; the claims by death to £202,819 (an amount stated to be "within the expectancy"); claims by endowments maturing to £113,879; life expenses to £81,597 (20·4 per cent. of premiums), and life funds at close of year to £3,903,688 (London and Lancashire, £2,996,939; Scottish Metropolitan, £906,749). The net interest yield on the life fund was about £3 17*s.* 8*d.* per cent.

Sinking fund premiums, £3,163; fund, £26,969. Fire premiums, £47,568; fund, £19,027. Accident premiums, £24,151; fund, £10,572. Employers' liability premiums, £20,649; fund, £12,247. General premiums, £47,759; fund, £15,920.

Total assets, December 31, 1914, £4,292,248.

LONDON AND MANCHESTER INDUSTRIAL ASSURANCE COMPANY, LIMITED.

Head Office: 50 Finsbury Square, London, E.C. Established 1869. Authorised capital, £100,000, in shares of £1. Paid up on March 24, 1915, £20,583. Dividend and bonus to shareholders together amounting to £3,087 were paid in 1914–15.

THE NATIONAL PROVINCIAL BANK OF ENGLAND, LIMITED, having numerous Branches in England and Wales, as well as Agents and Correspondents at home and abroad, affords great facilities to its customers, who may have money transmitted to the credit of their Accounts through any of the Branches free of charge.

At Head Office and Branches DEPOSITS are received, CURRENT ACCOUNTS opened, and all other Banking business transacted.

Copies of the Annual Report of the Bank, Lists of Branches, Agents and Correspondents may be had on application at the Head Office and at any of the Bank's Branches.

Transacts life and industrial business. Life premiums in year to March 24, 1915, £71,445; claims, £10,106; expenses, 15·5 per cent. of premiums; fund, increased by £55,602, £251,559; net interest yield, £3 14*s.* 8*d.* per cent. Annual valuations are made.

Industrial premiums, £663,528; claims, £316,245; expenses, 43·3 per cent. of premiums; fund at close of year, £992,453. Total assets, March 24, 1915, £1,320,997.

LONDON AND MIDLAND INSURANCE COMPANY, LTD.

Head Office: 213 Piccadilly, London, W. Established as the "Midland Insurance Company, Limited," in 1908. Name changed, 1910, to Midland and Textile Insurance Company, and again in 1913 to above. The businesses of the London Mutual Fire Insurance Company of Canada (established 1859), the Imperial Fire Insurance Company (of Ontario), and the Canada Hail Insurance Company were absorbed by the Company in 1913. Nominal capital, £452,204, in 500,000 Cumulative Five per Cent. Preference shares of 10*s.* each and 808,814 Ordinary shares of 5*s.* each. Subscribed on December 31, 1914, £143,383, and called up, £113,537, there being 191,111 Preference shares of 10*s.*, 149,233 fully paid Ordinary shares of 5*s.* with 1*s.* called up, and 42,078 fully paid. There were also £46,000 Five per Cent. Debentures outstanding at the end of the year. During the year £39,000 profit-sharing bonds were sold at par to provide the cash required in connection with the closing of the foreign accounts of the Company.

Transacts fire, accident, sickness, burglary, plate-glass and miscellaneous insurance, and commenced the transaction of workmen's compensation insurance in April 1911.

For the year ending December 31, 1914, the net premiums amounted to £52,374, and the claims paid and outstanding to £39,653; expenses, £38,997; debit balance (subject to provision for unexpired risks) carried to balance sheet, £3,886. Assets, December 31, 1914, £204,799, include £70,885 in respect of shares of three Canadian insurance companies acquired, £3,886 debit balance of revenue account referred to above, and £60,803 loss on closing of foreign and other accounts.

LONDON AND PROVINCIAL ASSURANCE CO., LTD.

Head Office: Cleveland House, City Road, London, E.C. Registered January 24, 1906.

Capital authorised, £150,000, in 75,000 Deferred and 75,000 Preferred shares of £1; issued, £90,123 (paid up on December 31, 1914, £82,994). Further liability on Deferred shares, 5*s.* per share (callable). The Preferred are entitled to a preferential dividend of 5 per cent., and thereafter the Deferred shares are entitled to a like dividend, after which the balance of profits available for dividend is to be apportioned so that each Deferred share shall take four times as much as each Preferred share. No dividend has yet been paid.

The Company has acquired the whole of the share capital of the Provincial Homes Investment Company, Limited, and the Irish Provident Assurance Company, Limited. It undertakes, life, endowment, house purchase, accident, and fire insurance.

The accounts for the year to December 31, 1914, show ordinary life premiums, £12,469, and fund at close of year, £137,008; industrial life premiums, £32,156, and industrial life fund, £5,629; bond investment and endowment certificate premiums, £15,221, and relative fund, £108,276. Fire premiums, £278; fund, £923. Total assets, December 31, 1914, £372,271, include formation and extension expenses, £31,110; Provincial Homes Investment Company, £1,369, and cost of businesses acquired, £50,137.

During 1913 the shares were acquired by the Yorkshire Insurance Company.

Premiums, 1914, £303,388; first year's settlements, £64,628; balance of 1914 underwriting account carried forward to 1915, £229,294. Reserve fund, £20,000. Balance of profit and loss account carried forward, £36,667. Assets at close of year, according to the balance sheet, amounted to £432,730.

LONDON ASSURANCE CORPORATION.

Head Office: 7 Royal Exchange, London, E.C. Established 1720. Capital authorised, £2,000,000; subscribed, £896,550; paid up, £448,275. Shares for £25 with £12 10*s.* paid. Shareholders were formerly entitled to the entire profits of the non-participating section of the life business, and to one-third of the profits of the participating section, and paid thereout the expenses of management (but not inclusive of commission) of the life department. At the quinquennial valuation on December 31, 1910, however, a new system came into force. In the case of participating policyholders entering after January 1, 1911, they are to receive 90 per cent. of the divisible surplus in their series. The distribution of bonus prior to the coming into force of the new regulations was based on a cash allotment representing a percentage of the premiums paid during the quinquennium, which in reversionary form provided decreasing bonuses at death, according to the advancing ages of policyholders. But under the new system the more popular method of uniform compound reversionary bonuses will be adopted in cases of policies effected after January 1, 1911, and this system will apply to endowment as well as whole-life assurance. It is not proposed to alter the method of bonus distribution in the case of those whose policies were in force at the end of the last quinquennium, but it is officially estimated that their prospects of bonus are improved through the reforms introduced. Dividend to shareholders paid in respect of 1914 was 20 per cent., or 50*s.* per share, free of income tax, as for each of the previous 30 years, with the exception of 1905, in respect of which 60*s.* was declared. Price of shares, £12 10*s.*; yield, £6 9*s.* 3*d.* per cent.

The London Assurance is one of the oldest and most influential of Metropolitan companies transacting a miscellaneous business. Like its near neighbour, the Royal Exchange Assurance Corporation, which was also founded in 1720, it carries on life, fire, accident and marine insurance. It paid nearly a million sterling in settlement of claims arising from the San Francisco disaster in 1906.

Fire Department.—In 1914 the fire premium income amounted to £689,065; the losses to £368,109; and the expenses to £274,285. Interest earnings on the fire fund produced £26,548. A sum of £53,197 was transferred to profit and loss from the fire fund, which on December 31, 1914, amounted to £770,000, as compared with £750,000 at the beginning of the year. The fire fund, apart from other reserves applicable to this section of the business, represented about 111·7 per cent. of the year's premiums, as compared with 108 per cent. at December 31, 1913.

Life Department.—The last quinquennial valuation of the life business was made at end of 1910 on a very strong basis: O^M Mortality Table, net premiums, and $2\frac{3}{4}$ per cent. interest. Bonuses to participating policies represent in cash form $27\frac{1}{2}$ per cent. of the premiums paid during the last quinquennium. See above for description of new system of bonus distribution to be henceforth adopted. In 1914 the net new sums assured amounted to £494,238; the total net life premiums to £210,235; life expenses to 11·3 per cent.; the claims by death, inclusive of bonuses, to £170,789, and by survivance to £17,520; and the life funds at close of year, increased by £82,994, to £2,723,180, after allocating £52,000 to an investments depreciation account. Net interest yield on life fund, £4 1*s.* 10*d.* per cent. A new life prospectus was issued by the Company in 1911, containing new rates of premium those for non-participating policies being reduced

SCOTTISH UNION AND NATIONAL
INSURANCE COMPANY.

Established 1824.

TOTAL FUNDS - - - £10,250,000.

LONDON ... ... **5 WALBROOK, E.C., and 55 PALL MALL, S.W.**

and those for participating policies being revised to meet new conditions.

MARINE DEPARTMENT.—In 1914 the net marine premiums amounted to £465,107; the losses to £299,984; the departmental interest earnings to £14,926; and the marine fund, after transference of £90,516 to profit and loss account, to £450,000, being increased by £30,000.

ACCIDENT DEPARTMENT.—Accident premiums in 1914 amounted to £16,379, and accident funds at close of year to £25,000, after transferring £1,954 to profit and loss account.

CAPITAL REDEMPTION ACCOUNT.—Premiums, £1,636; fund, £10,246.

GENERALLY.—Interest, dividends, and fees not carried to other accounts (less income tax) amounted to £34,227. The amounts transferred to profit and loss account were as follows: from life account, £15,000; from fire account, £53,196; from marine account, £90,516, and from accident account, £1,954. On the other hand, dividends to shareholders were paid in 1914 to the amount of £89,655. The sum of £100,000 was transferred to investments depreciation fund from profit and loss account. The general reserve fund at close of year was £450,000 and the investments depreciation account, £252,000; whilst the balance of profit and loss account, after provision for the dividend to be paid in 1915, amounted to £78,102 at close of the year. Apart from shareholders' paid-up capital (£448,275), life fund (£2,723,180), capital redemption fund and investments depreciation account, the total reserves and balances, after provision for dividend, amount to £1,773,102, representing about 151 per cent. of the combined fire, accident and marine premium income; so that the financial position is very strong. Total assets, December 31, 1914, £5,495,401. All the quoted securities were valued at middle prices in London and New York on July 27 and June 30, 1914, respectively, and on this basis the depreciation is more than covered by the investments depreciation fund.

LONDON GUARANTEE AND ACCIDENT CO., LTD.

Head Office: 20–22 Lincoln's Inn Fields, W.C. Established 1869. Capital authorised, £250,000; subscribed on December 31, 1914, £189,253; paid up, £109,886. 5,000 Five per Cent. Preference shares of £5 each are fully paid up, and on 25,000 Ordinary shares of £5 each £2 per share is paid up. There are also 39,253 Five per Cent. Preference shares of £1 each, on which £34,886 has been paid up. On the Ordinary shares for the year 1914 a dividend of 12*s.* 6*d.* per share (less income tax) was declared, representing 31¼ per cent. on Ordinary share capital. Price of Preference shares, £5 5*s.*; yield, £4 16*s.* 5*d.* per cent.; price of Ordinary shares, £10 6*s.* 3*d.*; yield, £6 2*s.* 6*d.* per cent.

In 1914 the net premium income, increased by £169,193, amounted to £1,241,587, apportioned as follows: Accident, £107,212; employers' liability within United Kingdom, £49,084; other classes, £1,085,291. Claims and trading outgoings of every kind cost £649,183 (accident, £56,306; employers' liability within United Kingdom, £23,646; other classes, £569,231). Interest, &c., less expenses of issue of new Preference capital, &c., produced £36,104. At close of year, excluding sums set aside for outstanding losses, the accident fund amounted to £62,761; the employers' liability fund to £15,851; the general fund to £330,545; the reserve fund to £170,000; and after provision for dividend £38,894 was carried forward in profit and loss account. Assets amounted to £1,357,135.

Norwich Union Mutual Life Office

Founded 1808.

Because of its

AGE. It is a Centenarian in its own right, and, by its absorption of the Amicable Society, THE OLDEST LIFE OFFICE IN THE WORLD.

MAGNITUDE. Its annual volume of New Business is very much larger than that of any other British Life Office not transacting industrial business. In 1914, notwithstanding war conditions, £2,857,193 was completed in the United Kingdom (as against £2,794,738 in 1913) and £1,786,331 in the Colonies and abroad.

RESERVE STRENGTH. Its Valuations are made on a Reserve Basis of 2½%—a rate attained, or even aimed at, by very few Offices.

PROFIT YIELD. Notwithstanding the severity of the Reserve Basis, the 1911 Valuation showed a Profit of £727,153, and the handsome scale of Bonuses of 1906 was maintained.

ALERTNESS. Its special Tables are designed to meet all the needs of the Twentieth Century, and have done much to popularise Insurance.

ECONOMY. The ratio of expenditure to premium income, always low having regard to the volume of new business, in 1914 was 1½% lower even than in 1913.

THE OUTSTANDING BRITISH LIFE OFFICE.

Write for Prospectus and Annual Report to the Secretary,
NORWICH UNION LIFE OFFICE, NORWICH,
or to any Branch Office of the Society.

for its policyholders. Its ordinary profit system (*but see below*) is to reduce the premiums after seven years' payments have been made. There are several series of policies, entitled to reductions at varying rates, presently ranging from 52 per cent. to 121 per cent., in the latter case no payment being made by the assured, but the equivalent of 21 per cent. of the premium being accumulated at compound interest as an addition to the sum assured.

A system under which amounts given as reduction of premiums may be accumulated for the benefit of members at 10*s.* per cent. less than the net rate of interest earned on the funds was introduced in 1912.

New entrants after July 1, 1914, are offered an alternative scheme of participation in profits, viz., an allotment of a compound reversionary bonus, a minimum bonus of 30*s.* per cent. being guaranteed for each year up to June 1925. The reversionary bonus declared in this series for the year beginning July 1, 1915, was 35*s.*per cent. The rates in force for such participating assurances are considerably below those usually charged.

Under a system of minimum premiums, policies for guaranteed amounts are issued at less than average non-profit rates, which, nevertheless, have the prospect of eventually participating in profits. The scheme is particularly attractive to those who desire the maximum amount of assurance from the outset of their policies in return for such a premium as they can afford. The following announcement appeared in the annual report for 1907 : " During the year the directors have arranged a system of children's deferred assurances or endowment assurances without medical examination, but entitled to full participation, premiums being payable during the term of the policy, or only until age 21, but returnable at any time, before age 21, with compound interest at 2½ per cent., on surrender of policy. These and the fixed endowments granted by the Association, which, however, are non-participating, but have similar provisions as to return of premiums with interest on surrender, seem to provide all necessary facilities for parents, godparents and others who are concerned for the education, starting in life, and future welfare of children."

Valuations are made annually, in which full provision is always made with the view of there never being any diminution of rates of reduction once declared. The valuation as at December 31, 1914, was made by the $O^{M(5)}$ Mortality Table, with interest at 3 per cent., The Association claims to be managed at a lower ratio of expenditure to premium income than any other life office in the world.

In 1914 the net new sums assured by life policies amounted to £814,958 ; total net life premium income to £430,512, of which the expenses absorbed £4 4*s.* 9*d.* per cent. ; and claims by death to £283,112 (less by £90,557 than " the estimated amount according to the table of mortality used in the valuation "). Reductions in premium were granted to policyholders to the extent of £218,018 (nearly 51 per cent. of entire premium income). The amount of net liability brought out by the valuation was £5,299,541, while the reduction of premium and reversionary bonus funds amounted to £5,368,341, including reserve funds £65,000, and unappropriated balances of £3,800. " Endowments certain " fund (premiums, £13,248), £69,485. Interest yield on total funds, £4 4*s.* 11*d.* per cent. after deduction of income tax.

MARINE & GENERAL MUTUAL LIFE ASSURANCE SOC.

Head Office : 14 Leadenhall Street, London, E.C. Established 1852. This life office, which has throughout been excellently managed and has yielded large profits to its participating policyholders, who are entitled to the whole divisible surplus, was originally a sort of domestic institution for the assurance of officers connected with the " Peninsular and Oriental " and " Royal Mail " Steamship Companies. Since 1880 the Company has largely extended its sphere of operations. It does not transact much marine insurance in the ordinary sense, but it does a small amount of business, in addition

to life assurance, in the insurance of passengers' and mariners' effects.

A quinquennial valuation was made as at December 31, 1914, by the O^M and O^{M5} Tables, net premiums, and 3 per cent. interest. After setting aside £128,022 to meet the depreciation in securities, the surplus ascertained was £222,126, of which directors declared £217,700 to be divisible net profits. Reversionary bonuses were at the rate of £2 per cent. per annum on sums assured for each year's premium due and paid in the quinquennium, excepting only the first year's premium in the case of policies participating for the first time. Interim bonuses on policies now participating which become claims during the current quinquennium are at the rate of £1 per cent. per annum; but endowment assurances which mature receive interim bonuses at the rate of £2 per cent. per annum.

During 1914 the net new assurances amounted to £258,046, and the total net premium income was £166,954 (on life policies, £155,875; on deferred annuities, £5,787; and on transit insurances of baggage, £5,293). Expenses absorbed 16 per cent. Claims by death amounted to £71,649 (stated to be "within the expectation under the mortality tables" (and by survivance to £22,021. At the end of the year the funds amounted to £2,080,457. Net interest yield on funds invested and uninvested, £4 3*s.* 10*d.* per cent. after deduction of income tax.

MARINE INSURANCE COMPANY, LIMITED.

Head Office: 20 Old Broad Street, London, E.C. Established 1836. Capital authorised and subscribed, £1,000,000; paid up on December 31, 1914, £600,000. Shares for £25, with £15 paid. Dividends paid in 1914, £2 5*s.* per share, less income tax. Price of shares, £34 12*s.* 6*d.*; yield, £6 14*s.* 4*d.* per cent.

This Company does a large and select marine insurance business, on which a consistently high rate of profit has been made for many years past, and prospects of maintenance of dividend seem favourable. The Company does not publish a revenue account, but from its statement of affairs at end of 1914 it appears that the reserve fund then amounted to £470,000, and the balance of underwriting account to £545,618. Premiums and interest were received in 1914 to the extent of £457,600, of which first year's settlements and expenses absorbed £163,687, leaving a balance (included in above sum of £545,618) of £293,913. Assets on December 31, 1914, amounted to £1,635,115.

MARITIME INSURANCE COMPANY, LIMITED.

Chief Offices: 35–45 Brown's Buildings, Liverpool; 11 Royal Exchange, London, E.C. Established 1864. Capital authorised, £1,000,000; subscribed, £500,000; paid up, £100,000. Shares of £10 each, with £2 paid. These are held by the Scottish Union and National Insurance Company, which purchased the undertaking in 1914. Dividend for 1914, 17½ per cent., less income tax.

Premiums were received in 1914 amounting to £286,461, of which first year's settlements absorbed 25·5 (as compared with 31·9 in the previous year) per cent. The reserve fund stood at £180,000, and the balance in profit and loss account, after provision for the dividend above referred to, at £51,790. Total assets at close of 1914, £673,408.

MERCHANTS MARINE INSURANCE COMPANY, LTD.

Head Office: 37 Cornhill, London, E.C. Established 1871. Capital authorised and subscribed, £500,000; paid up, £125,000. Shares, £10 each, with £2 10*s.* paid. Dividend for 1914 (7½ per cent., free of income tax) was much more than provided out of interest, which, after deduction of income tax, produced £17,754, while the amount of the dividend was £9,375. Price of shares, £3 17*s.* 6*d.*; yield, 6 per cent.

The underwriting account for 1913, closed in 1914, showed a balance of £45,208 after transfer of £40,000 to the underwriting suspense account, which amounted to £46,440 on December 31, 1914.

The net premiums received in 1914 amounted to £264,483, whereof about 18·7 per cent. was absorbed in

first year's settlements. The reserve fund amounted to £125,000, and the balance of underwriting account for 1914 to £197,207. Total assets, December 31, 1914, £644,192.

METROPOLITAN LIFE ASSURANCE SOCIETY.

Head Office: 13 Moorgate Street, London, E.C. Established 1835.

This, one of the four British mutual non-commission-paying offices, is a very excellent institution, which has consistently returned large profits to its select class of policyholders. In 1914 the net new assurances amounted to £226,563; the total net premium income to £172,864; the claims by death to £101,397 (about 55 per cent. of the amount expected), and the funds at close of year to £2,428,580, of which £35,000 represented general reserve fund and £100,000 investment reserve fund. The interest yield was about £4 2*s.* 10*d.* per cent. after deduction of income tax. Expenses absorbed about 6·5 per cent. of the premium income—a very small proportion.

Annual valuations are made in this Society. The valuation at the close of last year was made by the O^{M} Table of Mortality, in combination with 3 per cent. interest. The surplus ascertained was sufficient to maintain the large reduction of premiums previously granted on policies entitled to participate, which now range from 34 to 79 per cent. of the premiums, leaving an unappropriated balance of £18,424, after adding £25,000 to the investment, reserves and writing £25,000 off the value of certain securities. Policies are entitled to participation after payment of five years' premiums. The Society deserves a larger share of new business. The incidence of mortality has always been very favourable. A special feature of this Society is its discounted abatement system, under which, in order to give policyholders the immediate benefit of future reductions in premiums, and to meet the wishes of those desiring the largest assurance at the least cost, the directors have adopted tables of exceptionally low premiums for whole-life policies and endowment assurances. The total assets amounted on December 31 last to £2,443,354.

MOTOR UNION INSURANCE COMPANY, LIMITED.

Head Office: 10 St. James's Street, London, S.W. Established 1906. On December 24, 1914, authorised capital, £300,000; issued, 200 shares of £10 each fully paid, 9,800 shares of £10 on each of which £2 was paid, and 172,544 Five-and-a-Half per Cent. Cumulative Preference shares of £1 each, fully paid; paid-up capital thus £194,144. Dividend declared in respect of 1914, 22½ per cent. (less tax) on the amount paid up on the Ordinary shares. Price of partly paid Ordinary shares, £6 17*s.* 6*d.*; yield, £6 13*s.* 4*d.* per cent.; price of Preference shares, 18*s.*; yield, £6 5*s.* 9*d.* per cent.

Company was formed to insure motor-car and other risks (including employers' liability insurance), and also undertakes fire, burglary and personal accident risks.

A Marine Department was opened in 1914.

The Company entered into an agreement to purchase as from December 25, 1912, the goodwill of the National British and Irish Millers' Insurance Company, Limited. The assets and charter of the "Eagle Insurance Company of New York" were purchased in 1912, with the view of possible future developments, although it was stated at the annual meeting on March 31, 1913, that there was no immediate intention of commencing active operations in America or in connection with that Company.

In the year to December 24, 1914, net premiums amounted to £191,235, and claims on 1912, 1913 and 1914 policies to £89,426. Assets at end of financial year, £543,846. Reserve for unexpired risks, £88,907, and reserve for outstanding claims, £31,304. Balance carried forward, £5,153, after provision for dividend, transfer of £8,417 to investment reserve fund (thereafter amounting to £25,000), and transfer of £1,301 to income tax reserve (making that reserve £3,000).

MUNICIPAL MUTUAL INSURANCE, LIMITED.

Head Office: 16 and 17 Finsbury Square, London, E.C. Established 1903. This Association was formed for the purpose of insuring against fire the property of municipal and other public bodies, and to undertake their other insurance risks. The chief business transacted is that of fire insurance, but recently non-hazardous casualty risks have been written, such as burglary, fidelity guarantee, plate glass, accidents to scholars, &c. The Company arranges other descriptions of insurance for its members with other companies on favourable terms. There is no share capital, but the funds appear at a high proportionate standard as compared with the net premium income, and it is stated that a binding agreement has been made with a group of important and substantial British insurance offices whereby these companies guarantee the solvency of the Association to an unlimited extent. The profits are divisible among the fire policyholders, and a reduction not exceeding 20 per cent. of premiums was declared in 1915 on policies on which four years' premiums had been paid, and a further additional reduction on policies of nine years' standing subject to renewal for five years. Net fire premium income, 1914, £11,671. Fire fund, December 31, 1914, £14,484. Net miscellaneous premium income, 1914, £726. Miscellaneous fund, December 31, 1914, £176. General reserve fund, £7,500. Profit and loss balance, £1,242. Assets, December 31, 1914, £33,611.

NATIONAL BENEFIT LIFE AND PROPERTY ASSURANCE CO., LTD.

Head Office: 27 and 28 Newgate Street, London, E.C. Founded in 1890 as the National Benefit Trust, Limited; name changed to above in January 1912. Capital authorised, £120,000; subscribed on December 31, 1914, £104,715; paid up, £45,946. Dividend for 1914, inclusive of bonus, 10 per cent.

Formerly the Company's operations were restricted to house purchase and bond investment, but life and endowment assurances of all descriptions are now transacted, and new departments for fire, accident and general insurance were opened in 1912. In the life section there are some special features, including an arrangement by which all whole-of-life policies become automatically payable in event of survivance to age 80. Life assurance can be effected in combination with house purchase, loans thereon being repaid by the policy in case of the borrower's death.

In 1914, life premiums, £7,179; life fund, £3,265; fire and general premiums, £61,190; fund, £7,493; bond investment and endowment certificate premiums, £56,499; fund, £534,000; investment reserve fund, £15,000; profit and loss balance, £6,538; general reserve fund, £6,000. Assets, December 31, 1914, £688,919.

NATIONAL BOILER & GENERAL INSURANCE CO., LTD.

Chief Office: National Buildings, St. Mary's Parsonage, Manchester; London Office: 60 Queen Victoria Street, E.C. Established 1864. Capital (on December 31, 1914): subscribed, £150,000; paid up, £52,500, in 15,000 shares of £10 with £3 10*s.* paid up. Dividend for six months to December 31, 1914, 9*s.* per share, less income tax. Price of shares, £17; yield, £5 13*s.* 4*d.* per cent.

Premiums, sales and fees in six months to December 31, 1914, £56,823; interest receipts, £3,396; claims and expenses, £45,299.

Current risk and reserve fund (increased by £5,000), £143,000; balance carried forward after provision for dividend, £7,636. Assets, December 31, 1914, £216,651

INVESTMENT POLICY.

The possession of this Policy not only provides an independence for those whom the assured desires to protect, but it also gives him A MOST VALUABLE ASSET which may prove to be of great service to him in his business.

There is no Better Form of Saving.

Until the termination of the War it is proposed to invest all new premiums received by the Star Assurance Society in British Government Securities.

Apply for full particulars of the above mentioned policy to

THE STAR ASSURANCE SOCIETY,

Head Office, 32 Moorgate Street, LONDON, E.C.

J. DOUGLAS WATSON, General Manager.

scribed on December 31, 1914, £250,000; paid up, £50,000. Shares of £5 each with £1 paid. This statement of capital includes 5,000 shares issued in 1908 and 1909 at a premium of £1 10*s.* per share. The dividend declared in respect of 1915 was 15 per cent., free of income tax. Price of shares, £3 8*s.* 9*d.*; yield, £5 9*s.* 1*d.* per cent.

A successful and well-managed non-tariff fire Company, transacting also burglary, accident and plate-glass insurance. Has shown in each year from establishment consistent trading profits, which have been but little drawn on for dividend purposes, so that the reserves are now at a high standard. In 1914 the net premium income amounted to £69,035; interest earnings and fees to £7,232 (covering over 96 per cent. of the dividend); losses to £31,780 (46 per cent.); expenses to £25,654 (37·2 per cent.). After addition of £145 to reserve for unexpired risks, which is brought up to £23,011, representing one-third of the year's premium income, the credit balance, including balance brought forward from 1913, amounted to £24,991, of which £7,500 is applied to dividend, £5,000 in addition to general reserve fund (thereafter amounting to £100,000), and £12,491 carried forward. After provision for dividends and outstanding liabilities the balance and reserves, apart from capital and of investment reserve fund, amounted to £140,503, exceeding 203 per cent. of the year's fire premium income, showing a very strong financial position, and specially so for so young a Company.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.

Head Office: 39 King Street, Cheapside, London, E.C. Established 1830. A mutual life office, formed by the fusion of the old "National" and "Mutual" Life Offices. A well-managed and attractive institution.

In 1914 the net new business amounted to £402.645 in sums assured (£388,090 life and £14,555 other business). The total net premium income amounted to £210,736, of which life premiums were £200,888, the expenses of management (life) being 15·8 per cent. thereof. The net claims paid amounted to £162,497 by death and £49,912 by survivance. The interest yield was good, after deduction of income tax representing £4 13*s.* 2*d.* per cent. on the funds, excluding reversions. The accumulated funds were increased during the year by £42,514 to £3,139,517, of which £3,020,746 represented the life fund and £118,771 the capital redemption fund. Total assets, December 31, 1914, £3,364,718.

A quinquennial valuation was made at the close of 1913. The life assurance fund amounted to £2,986,833, and, although Stock Exchange securities had been written down during the quinquennium by £103,579, and were taken at selling prices on December 31, a satisfactory surplus was ascertained, sufficient to provide larger bonuses than were declared at the previous distribution and to permit the carrying forward of a large balance. The valuation was made by the O^{M} Mortality Table, in combination with 3 per cent. interest, the net premiums only being valued, leaving a reserve of nearly 20 per cent. of the ordinary actual premiums for expenses and contingencies. The surplus amounted to £341,098, of which a sum of £235,934 was divided among participating policyholders, and, after applying £3,000 to the estimated expenses of the valuation, a balance of £102,164 was carried forward. The reversionary bonuses were at the rate of 36*s.* per cent. per annum, on the compound principle (*i.e.* on sums assured and previous bonuses), in cases of all policies effected since July 1896, whilst the average rate of bonus on policies issued prior to that date was 46*s.* per annum.

NATIONAL PROVIDENT INSTITUTION.

For mutual life assurance. Head Office: 48 Gracechurch Street, London, E.C. Established 1835. This is one of the largest and most attractive of English mutual life offices. It is economically managed, the funds are profitably and well invested, and the incidence of mortality has always been favourable. The last quin-

ALL CLASSES OF INSURANCE EFFECTED.

The Company has experienced and fully empowered Representatives at all important centres throughout the World.

quennial valuation was made on November 20, 1912, by the O^M Table for assurances, in combination with net premiums and 3 per cent. interest. Out of a surplus of £910,307 (apart from £42,771 paid as interim bonus during the quinquennium) the sum of £856,788 was divided amongst policyholders, and £53,519 was carried forward as undivided surplus. The profit divided, notwithstanding the fact that a sum of £135,594 had been applied in writing down securities, was sufficient fully to maintain the average rate of bonus declared at the three preceding quinquennial valuations, which represented more than 35 per cent. of the premiums received during the quinquennium. The bonus additions to policies were at rates of 34*s.* per cent. per annum and upwards, according to ages at entry, duration of policies, and system. On whole-of-life policies the additions were 40*s.* per cent. per annum and upwards.

The report for the last financial year, which ended on November 20, 1914, shows net new assurances for £589,475; a total net premium income of £516,341, in addition to £11,297 in consideration for annuities granted; expenses (after allowing for cost of annuity business) amounting to 10·2 per cent. of the premiums (a very small proportion); claims by death, £319,140 (72½ per cent. of the amount "expected"); claims by maturity, £217,099; payments for reductions in premiums, £43,289; and life funds at close of year (increased by £139,062), £7,390,678, in addition to superannuation fund of £13,817. The interest yield was about £4 1*s.* 10*d.* per cent. after deduction of income tax. Total assets, £8,072,917.

During its existence up to November 20, 1914, the Society had issued 93,144 policies, and had paid over £17,985,000 in claims on the death and survivance of members.

NORTH AND SOUTH INSURANCE CORP., LTD.

Chief Offices: 5 Chapel Street, Liverpool. Established 1909. On December 31, 1914, the nominal capital amounted to £100,000, in shares of £1; issued capital, less shares forfeited, £31,763, of which called up, £19,852 (12*s.* 6*d.* per share), and paid up, £17,096. The Company is authorised to transact every class of insurance business (other than life, employers' liability, and workmen's compensation insurance). It was stated on issue of prospectus that powers would be taken to issue policies of insurance against employers' liability and workmen's compensation as soon as the £20,000 required by the Act of 1907 had been deposited. The business is conducted on non-tariff lines.

The directors' report for the year ended December 31, 1914, shows that the net premiums amounted to £7,119. Assets, £22,577, inclusive of organisation account, £7,610, preliminary expenses, £1,333, and debit balance of revenue account, £6,726.

NORTH BRITISH AND MERC ANTILE INSURANCE CO.

Head Offices: 61 Threadneedle Street, London, E.C., and 64 Princes Street, Edinburgh. Established 1909. On December 31, 1914, capital authorised, £6,000,000; subscribed, £4,500,000; paid up, £2,437,500, of which £687,500 is represented by 110,000 shares for £25 with £6 5*s.* paid and £1,750,000 by Four per Cent. Preference stock. Dividend on Ordinary shares in 1915, £2 per share, less income tax. Price of shares, £29; yield, £6 17*s.* 11*d.* per cent.; price of Preference stock, £77 10*s.*; yield, £5 6*s.* per cent.

The North British and Mercantile is one of the most important of British companies, both as regards fire and life insurance, and deservedly enjoys a world-wide reputation for financial strength and liberal treatment of its policyholders. The Company acquired the undertaking and assets of the Ocean Marine Insurance Company as from January 1, 1908, and the directors exercised their option under a special Act of Parliament to preserve the corporate existence of that Company as a subsidiary concern. *See* OCEAN MARINE INSURANCE COMPANY.

As from January 1, 1910, the Company took over the assets and business of the Railway Passengers Assurance

HIGH BONUS ADDITIONS

The Bonus Additions granted by the SCOTTISH AMICABLE have been consistently high throughout the history of the Society. The rate declared at the last Division of Profits represented additions varying, according to duration of Policy, from £1 15s. 0d. to £4 4s. 7d. per cent. per annum on the original sum assured.

Corporation, and the directors exercised their option to take over the shares of that Company and continue its corporate existence. *See* RAILWAY PASSENGERS ASSURANCE CORPORATION.

FIRE DEPARTMENT.—In 1914 the fire premiums amounted to £2,146,290. The losses by fire, including contributions to fire brigades, amounted to £1,416,617, and the expenses and commission to £852,356. After transference of £90,391 to profit and loss, representing an underwriting surplus of £9,831 and interest earnings (net) of £80,560, and adjusting the specific reserves for unexpired risks to £858,516, the ordinary (additional) reserve remained at £1,550,000, and the total fire reserves at the close of the year thus amounted to £2,408,516, thus considerably exceeding the year's premiums. This is a very satisfactory position, especially considering the large amount of the balance carried forward, as undernoted, in profit and loss account.

LIFE DEPARTMENT.—The last quinquennial valuation was made at close of 1910 on a strong basis: O^M Mortality Tables, net premiums, and 3 per cent. interest. The shareholders take the moderate proportion of one-tenth of the divisible surplus in the life assurance department, and the amount divided amongst participating policyholders produced bonus additions on the compound system (that is, on the sums assured and previous bonus additions) at the rate of 30*s.* per cent. in respect of each premium paid during the quinquennium. This is equivalent to reversionary bonuses on the original sums assured ranging from £1 10*s.* to £3 13*s.* per cent. per annum.

In 1914 the net new sums assured amounted to £2,259,061; the total net premium income, increased by £40,467, to £1,243,664; claims by death to £820,278; claims by survivance to £217,422; expenses of the life business to about 13.7 per cent. of the premiums; interest to about £4 2*s.* 3*d.* per cent., after deduction of tax; life fund to £14,573,414; consideration for new annuities to £188,677; annuities paid to £312,396, and annuity fund at close of year to £2,994,176.

SINKING FUND ACCOUNT.—Premiums in 1914, £26,796, and fund at close of year, £128,230.

GENERALLY.—The balance brought forward from 1913 in the profit and loss account was £1,126,816, after provision for the dividends to stock and shareholders. The total profits taken into profit and loss account were as follows, amounting altogether to £263,976: from fire department, trading surplus, £9,831, and interest earnings, £80,560; proportion of shareholders' life profits applicable to the year, £37,738; interest earnings not departmentally credited, less charges not departmentally debited, £135,847. The sum of £266,715 is required for Ordinary and Preference dividends payable in 1915, and the balance of profit and loss account carried forward thereafter was £1,161,815. The total assets on December 31, 1914, amounted to £25,517,294, exclusive of those appertaining to the Ocean Marine (£889,278) and Railway Passengers (£781,083) Companies.

For the Ocean Marine Company's accounts and for the Railway Passengers Assurance Company's accounts, which are appended to those of the North British and Mercantile, see OCEAN MARINE INSURANCE COMPANY and RAILWAY PASSENGERS ASSURANCE COMPANY, respectively.

Accumulated Funds (1914), £8,323,000.

registered as a Company limited by shares, as provided for in the Northern Assurance Act, 1908. The shares are now for £10, with £1 paid up. Dividend declared for 1914, 7*s.*, together with ordinary bonus of 2*s.*, both less tax, costing £124,594. Price of shares, £6 16*s.* 3*d.*; yield, £6 13*s.* per cent.

During 1914 the directors made arrangements for the purchase of the whole of the shares of the following companies:—

National Guarantee and Suretyship Association, Ltd., of Edinburgh, transacting fidelity business.

Royal Scottish Insurance Company, Ltd., of Glasgow, transacting all classes of business except life and marine.

White Cross Insurance Association, Ltd., transacting motor insurance business, but with powers to undertake all classes of insurance except life.

The figures of the "National Guarantee" since May 31, 1914 (the close of its financial year) and of the "Royal Scottish" for the whole year are included in the Northern accounts for 1914. The "White Cross" Company's figures are not included, as its purchase was made towards close of the year.

FIRE DEPARTMENT.—In 1914 the premiums amounted to £1,318,338. The losses incurred amounted to £765,939, or 58·1 per cent. of the premiums. The general average loss ratio of the Company from the beginning is now 57.3 per cent., or, including its provision for unexpired risks, 59·2 per cent. of premiums received. The departmental expenses of management in 1914 were £495,900, and, after adjustment of the provision for liability under current policies on the unusually high basis of 50 per cent. of the year's premiums, a profit was made on the year's trading of £27,348. After transferring this amount of profit, together with interest of £68,068, to profit and loss account, the fire fund amounted to £1,859,169 (including £659,169 set aside as provision for unexpired risks); while the balance in profit and loss account, after provision for dividends and bonuses, amounted to £258,633. Thus the funds available as security for fire policyholders, apart from paid-up capital and excluding investment reserve fund, life and annuity funds, accident, capital redemption, and employers' liability funds, on the assumption that these funds are adequate for the purposes to which they are assigned, and staff funds of £169,091—amount to £2,117,802, representing about 161 per cent. of the fire premium income.

ACCIDENT DEPARTMENT.—The Company opened an accident department in 1907, and purchased the business of the Compensation and Guarantee Fund for £22,536. In the *Employers' liability section* the premiums in 1914 amounted to £70,089, trading profit, £12,846. Fund at end of year, £56,951, including £16,906 for outstanding claims.

Accident section. Premiums, £7,337, trading profit, £497; funds, £4,424, including £756 for outstanding claims.

General Section. Premiums, £48,065, trading profit, £4,376, fund, £39,179, including £10,146 for outstanding claims.

LIFE DEPARTMENT.—The surplus of the non-participation branch belongs to the shareholders, and the surplus of the participation branch to the participating policyholders. The assured in the participating section have practically all the benefits of mutual life assurance, for not only do they receive the entire profits on their fund, but their expenses are limited to the very moderate proportion of 10 per cent. of the premiums. Very good bonuses are paid, as might be expected. The last quinquennial valuation, on December 31, 1910, was made on a strong basis: the $O^{M(5)}$ Mortality Table, 90 per cent. of the gross premiums, and 2¾ per cent. interest for the non-participation fund, and O^{M} Table, net premiums, and 2½ per cent. interest for the participation branch, and bonuses were declared at the rate of 31*s.* per cent. per annum, as on four previous quinquennial occasions. Prospective intermediate bonuses at the rate of 30*s.* per cent. per annum were declared on all policies becoming claims during the now current quinquennium. In 1914 the net new sums assured in the life department amounted to £377,307. The total net

life premium income amounted to £294,358; expenses, as arranged, to one-tenth of the premiums, except in the endowment and capital redemption account, where expenses are only 5 per cent. of the premiums; claims to £385,241, of which £126,323 arose through survivance; and the life and annuity funds at close of year to £5,384,003. Interest on the participation life funds, after deduction of income tax, yielded about £3 14*s.* per cent. The Company's non-participating life premium rates were reduced in 1908. Capital redemption premiums, £8,683; fund at close of year, £110,472.

The Company's total assets amounted on December 31, 1914, to £8,909,751. The market values of securities, taking the lower price as at December 31, 1913, for those then held, and cost price for those subsequently purchased, show a depreciation of £408,780 compared with ledger values in balance sheet.

NORWICH & LONDON ACCIDENT INSURANCE ASSOC.

The business of this Company has been transferred to the NORWICH UNION FIRE INSURANCE SOCIETY, LTD. (*q.v.*).

NORWICH UNION FIRE INSURANCE SOCIETY, LTD.

Head Office: Norwich; Chief London Office: 50 Fleet Street, E.C.; City Office, 71 and 72 King William Street, E.C. Established 1797. Capital authorised and subscribed, £1,100,000; paid up, £132,000. Four per Cent. Debenture stock, £580,000. The Society was registered as a limited Company in 1908. Shares are for £25, with £3 paid. Dividend declared in 1915, 32*s.* per share, less income tax. Price of shares, £29 17*s.* 6*d.*; yield, £5 10*s.* per cent.

A well-managed insurance Company, the elder brother of the Norwich Union Life Office, with which it is closely associated for business purposes. The business was formerly limited to fire insurance, but the Company now transacts accident business also, and the business of the Norwich and London Accident Insurance Association was transferred to it as from January 1, 1908, in terms of agreement sanctioned by the Court of Chancery on July 26, 1909.

In 1912 the operations of the Company were extended to marine insurance.

FIRE DEPARTMENT.—In 1914 the net premium income amounted to £1,212,611, showing an increase of £24,942. Losses in 1914 and contributions to fire brigades together amounted to £725,227, or about 59·8 per cent. of the premiums. Expenses, including colonial and foreign taxes, £425,321. The trading profit seems to have amounted to £52,087, or to about 4·3 per cent. of the premiums. Fire insurance fund at close of year amounted to £1,284,356, thus exceeding the year's premium income, after transfer of trading profit to profit and loss.

ACCIDENT AND EMPLOYERS' LIABILITY DEPARTMENT.—In 1914 premiums, increased by £16,848, amounted to £433,192, claims to £251,442, and expenses, including commission, to £151,467. Transfer to profit and loss, £55,338. Fund at close of year, £335,750, including £162,473 for outstanding claims.

MARINE DEPARTMENT.—Premiums in 1914, £108,859, and fund at close of year, £105,575.

PROFIT AND LOSS ACCOUNT, &c.—There was no balance brought forward from 1913, after provision for dividends and bonuses payable in 1914. Profits amounting to £52,086 and £55,338 were transferred in 1914 respectively from fire and accident accounts, as above shown. Interest earnings and fees, less Debenture interest, income tax, and bad debts, £56,667. Profit on sale and maturity of stocks, £4,029. The balance of £168,120 thus resulting in this account at close of year was carried to the balance sheet to meet the dividends, and to provide for depreciation of Stock Exchange securities and other war contingencies.

BALANCE SHEET.—Assets, December 31, 1914, £2,802,980.

NORWICH UNION LIFE INSURANCE SOCIETY.

Head Office: Norwich; Chief London Office: 49 Fleet Street, E.C.; City Office: 71 and 72 King William Street, E.C. Established 1808.

A very enterprising and progressive life office, founded on the mutual system. During the last 25 years its progress has been most remarkable, and it transacts one of the largest businesses reported by British offices as far as new assurances are concerned. It is an attractive office to new entrants, and its bonuses indicated in the last quinquennial valuation report well maintain the former high standard of excellence. In 1909 the Society took over the business of the Victoria Mutual Assurance Society, Limited, which was correctly described as a "small but financially strong office."

The quinquennial valuation on June 30, 1911, was made by the O^M Mortality Table, as on the former occasion. The rate of interest assumed was 2½ per cent. Securities were written down by £264,022. The bonuses on new series policies issued prior to June 30, 1896, were the reversionary equivalents of 33 per cent. of the premiums contributed during the quinquennium on a whole-life footing, and the reversionary bonuses on new series policies issued subsequent to June 30, 1896, were at rates varying from 36*s.* to 68*s.* per cent. per annum, according to age at entry and duration of policies.

In 1914 the net new sums assured under ordinary life policies amounted to £4,643,525. The total net life premium income of 1914, excluding premiums of £32,178 in the "Scottish Imperial" section, was £1,532,330, of which expenses absorbed about 14·6 per cent., a moderate proportion considering the exceptionally large amount of the new business. Consideration for new annuities, £67,385. Claims by death amounted to £570,773 (£74,196 less than "expected"), and by survivance, £160,820. The increase in the Norwich Union life assurance fund during the year was £925,871. The total Norwich Union life and capital redemption funds at December 31, 1914, amounted to £12,886,762 (life fund, £10,826,755; annuity fund, £1,020,458; capital redemption fund, £1,039,549); the Scottish Imperial fund (additional) to £669,897. The net interest yield on the mean funds in 1914, after deduction of tax, was about £4 2*s.* per cent., indicating a very large profit from interest earnings in excess of those assumed for valuation purposes. Total assets, December 31, 1914: Norwich Union, £13,014,318; Scottish Imperial, £679,021.

OCEAN ACCIDENT & GUARANTEE CORPORATION, LTD.

(*See* **Commercial Union Assurance Company, Ltd.**)

As from January 1, 1910, the business of this Company was transferred to the Commercial Union Assurance Company.

OCEAN MARINE INSURANCE COMPANY, LIMITED.

(*See* **North British and Mercantile Insurance Company.**)

Head Office: 2 and 3 Old Broad Street, London. Established 1859. An agreement for the transfer of this Company's undertaking and assets to the North British and Mercantile Insurance Company was approved by the shareholders in February 1908. At December 31, 1914, the Ocean capital, now vested in the North British and Mercantile Company, was as follows: Capital, authorised and subscribed, £1,000,000; paid up, £100,000. Shares, £25 each, with £2 10*s.* paid.

Premiums were received in 1914 to the amount of £309,712, and first year's settlements cost £120,943. The profit and loss account shows dividends declared and paid on account of 1914 amounting to £19,386. The interest earnings, less tax, amounted to £24,356. After transferring £100,000 to reserve fund, the reserves amounted to £735,218, as follows: General reserve fund, £500,000; balance of profit and loss account, £24,318; underwriting reserve, £42,125; balance of 1914 underwriting account, £168,775. Assets, December 31, 1914, £889,278.

PEARL LIFE ASSURANCE COMPANY, LIMITED.

Head Office: Pearl Buildings, High Holborn, W.C. Established 1864. Capital authorised, £800,500; on December 31, 1914, subscribed and paid up, £440,050 in 20,000 fully-paid £5 shares, £40,050 in 80,100 shares of £5 with 10*s.* paid, and £300,000 in Six per Cent. Preference shares of £1 each, fully paid. Dividends and bonuses paid to Ordinary shareholders in 1914 amounted to £70,025. Price of fully paid shares, £40; yield, £7 19*s.* per cent.; price of partly paid shares, £8 15*s.*; yield, £3 10*s.* 9*d.* per cent.; price of Preference shares, £1 6*s.*; yield, £4 14*s.* 6*d.* per cent.

As from January 1, 1910, the Company took over the business of the London, Edinburgh and Glasgow Assurance Company, Limited.

This Company does an extensive life and industrial business, and the directors have continued the transaction of accident and employers' liability business, in which the London, Edinburgh and Glasgow Company operated. In 1914, in the ordinary life department, the new policies issued amounted to £1,891,319 in sums assured and £85,076 in annual premiums. The total premiums amounted to £590,292; claims by death £123,069, and by maturity £109,583; expenses to about 14.5 per cent. of the premiums; and funds at close of year to £3,831,907. The net interest yield was about £3 19*s.* 7*d.* per cent. The valuations are made annually in this department for the Pearl Company's policies by the H^M Mortality Table, on a net premium basis, at 3 per cent. interest, and for the London, Edinburgh and Glasgow policies by the $O^{M(5)}$ Table, in combination with interest at 3 and 3½ per cent., special loadings being reserved.

In the industrial department in 1914 the total premiums amounted to £2,513,423, claims to £1,100,854, commission and expenses to about 42.7 per cent. of the premiums, and funds at close of year to £5,261,418.

Accident insurance premiums in 1914 were £29,111; fund at close of year, £14,555. Employers' liability premiums, £2,750; fund, £2,750.

Total assets on December 31, 1914, £9,868,396, inclusive of £350,000 representing balance of cost of purchase of business, &c., of the London, Edinburgh and Glasgow Assurance Company.

PELICAN AND BRITISH EMPIRE LIFE OFFICE.

(*See* **Phœnix Assurance Company, Limited.**)

PHŒNIX ASSURANCE COMPANY, LIMITED.

Head Office: Phœnix House, King William Street, London, E.C. Established 1782. On December 31, 1914, capital authorised and subscribed amounted to £3,210,650; paid up, £422,855, in 309,755 shares of £10 each with £1 paid and £113,100 (Pelican) fully-paid shares of £1. The shares were formerly £50 each, £5 paid, and £5 fully paid, respectively, but were subdivided in 1913; 14,286 of the £5 fully-paid shares were issued on the amalgamation of the Pelican and British Empire Life Office with the Phœnix on January 1, 1908, and a further 8,334 shares on the amalgamation with the Law Life Assurance Society on January 1, 1910. Price of partly paid shares, £5 17*s.* 6*d.*; yield, £6 17*s.* 4*d.* per cent.; price of fully paid shares, £6 16*s.* 3*d.*; yield, £5 18*s.* 6*d.* per cent. £1,000,000 Four per Cent. Debenture stock was also issued in connection with the latter amalgamation. An issue of Four per Cent. Debenture stock (1911) to the extent of £277,950 was made in connection with acquisition of the Union Marine business, hereafter referred to. Dividend declared in respect of 1914, 8*s.* per share (less tax).

This Company is one of the most important in the country in the department of fire insurance. The Phœnix has a very large foreign and colonial as well as home fire business. It has also become a great life office through the absorption of the Pelican and Law Life Companies; and in 1907 it commenced the transaction of accident business. The Company commenced to transact marine insurance business on July 1, 1910, and acquired the undertaking of the Union Marine Insurance Company, Limited, above referred to, as on July 1, 1911.

Fire Department. — In 1914 the premiums amounted to £1,428,371, an increase of £24,568, the losses to £800,586 (56.0 per cent.), and the expenses to £558,172 (39 per cent.). The result of the year's fire trading resulted in a profit of £69,614, which, with interest of £64,042, was carried to profit and loss account. The general fire reserve at the end of the year amounted to £1,200,000, and reserve for unexpired risks to £650,000.

Marine Department.—The premiums for 1914 were £712,774, an increase of £114,966 Claims (1914 and previous years) £464,743, and expenses £75,191. Trading profit of £40,000, and interest of £20,045, was transferred to profit and loss account, and the fund was increased by £129,840 to £660,279.

Employers' Liability, &c., Department.—The premiums for 1914 were £97,021, losses £36,913, and expenses £38,237. Trading profit of £11,545 and interest of £3,817 was transferred to profit and loss, and at the end of the year the funds amounted to £104,044, including £27,477 for outstanding claims.

Life Department.—The new life business in 1914 amounted, after deduction of reassurances, to £1,266,743 in sums assured; the total net life premium income to £727,097; consideration for new annuities to £125,621; claims by death (within the expectation) to £622,468; claims by survivance to £122,146; expenses of management of the life business to about 12.9 per cent. of the premiums; and life funds at close of year to £10,994,189, after writing down Law Life fund securities by £232,222. The net interest yield was about £4 0*s.* 6*d.* per cent.

Sinking Fund Department.—Premiums, £35,601; fund, £361,306.

Generally.—The balance brought into profit and loss account from 1913, after providing for the final dividend in respect of that year, was £193,712. In addition to the transfers of trading profit and interest from the fire, accident and marine funds mentioned above, the following amounts were brought into the accounts: interest not carried to other accounts and fees, less income tax and Debenture stock interest, £11,538, and shareholder's proportion of Law Life profits,

NATIONAL HOUSE, NEWGATE STREET, LONDON.

Agents required in all Distrcts. Special Terms.

£54,852. After setting aside £15,220 for bad debts, and writing down fire, marine, and Law Life guarantee fund securities by £134,000, and providing for the dividend mentioned above, there remained a balance of £163,940 to be carried forward to 1915. This sum, together with the fire reserves of £1,850,000, amounts to £2,013,940, which is equivalent to about 141 per cent. of the fire premium income.

The participating life policyholders of the Company receive the whole of the divisible profits in this section of the business, and thus enjoy the advantages of a mutual life office transacting only participating business.

The Pelican was, prior to the amalgamation referred to, the oldest British joint-stock Company confining its operations to life assurance. It was originally founded in 1797, by the directors of the Phœnix, as a friendly institution, and the two companies during their long independent careers were closely allied for business purposes. It took over in 1903 the British Empire Mutual Life Assurance Company, which had itself in 1895 acquired the Positive Government Security Life Assurance Company. In 1908 the Pelican was absorbed by the Phœnix, and in 1910 the life department of the Company was further augmented by the acquisition of the Law Life Assurance Society.

The last quinquennial valuation of the policies in the Phœnix life fund, on December 31, 1910, was made by the O^M and O^A Mortality Tables, with interest at 3 per cent., on a net premium basis. The bonus rate was 34*s.* per cent. per annum over the quinquennium on these policies, as against 32*s.* per cent. per annum on Pelican policies at the previous valuation.

The total assets of the Company on December 31, 1914, amounted to £16,457,945.

PIONEER LIFE ASSURANCE COMPANY, LIMITED.

Head Office: 67 Dale Street, Liverpool. Established 1891. Capital (March 31, 1915) authorised and subscribed, £100,000, and paid up, £80,000, in shares of £1 with 16*s.* called and paid up. Dividend for 1914–15, 6*d.* per share.

Transacts life, industrial and accident insurance business in the United Kingdom. The report for the year ending March 31, 1915, shows net premiums of £92,927; claims, £38,819; and expenses, inclusive of commission, £44,180. At close of year the ordinary life fund amounted to £83,686, the industrial life fund to £22,860, and the investment reserve fund to £15,000. Assets, March 31, 1915, amounting to £210,151, include "establishment expenses," £79,420.

PREMIER INSURANCE COMPANY, LIMITED.

(*See* Yorkshire Insurance Company, Limited.)

PROFITS AND INCOME INSURANCE COMPANY, LTD.

Head Office: 9 Fleet Street, London, E.C. Established 1901. Capital authorised, £150,000; issued, £120,000; paid up on December 31, 1914, £40,000, in 20,000 Five per Cent. Cumulative Preference shares of £1 each, fully paid, and 100,000 Ordinary shares of £1 each with 4*s.* paid. Dividend for 1914 on Ordinary shares, 6 per cent., free of income tax. Transacts life, fire and general insurance.

In 1914 life premiums amounted to £19,469, and fire and general premiums to £141,145. On December 31 last, life fund, £126,375; general fund, £93,384. Balance of profit and loss, after provision for dividends, £1,548. Total assets, £304,355.

The quinquennial valuation of the life business was made on December 31, 1910, by the O^M Table at 3 per cent. interest for assurances, the life fund equalling the liability ascertained.

PROPERTY INSURANCE COMPANY, LIMITED.

above on absorption of the Provident Clerks' and General Accident Insurance Company, Limited, in 1907. Capital authorised, £400,000; subscribed, £208,620, and paid up, £85,000. There are 388 shares of £10 each with £8 paid, and 20,474 shares of £10 each with £4 paid. For 1914 a dividend of 20 per cent. was declared, less income tax. Price of shares, £13; yield, £6 5*s.* 9*d.* per cent.

In 1914 the net premiums (apart from marine) amounted to £140,693, the interest earnings to £12,039, and the claims paid and outstanding to £80,568. Marine department premiums, £59,134; fund, £55,449. At close of year total assets were £412,053; general reserve fund was £85,000; special reserve, £20,000; investment reserve, £18,000; reserve for outstanding claims, £54,674; superannuation fund, £12,671; reserve for unearned premiums, £54,277, and balance, after provision for full year's dividend, £11,703.

PROVIDENT CLERKS' AND GENERAL MUTUAL LIFE ASSURANCE ASSOCIATION.

Head Office: 27 and 29 Moorgate Street, London, E.C. Established 1840.

This mutual life office draws its customers largely, as its name indicates, from clerks in mercantile houses, and has always been successfully and profitably conducted. The last quinquennial valuation was made at the close of 1912 on a strong basis: O^M Table of Mortality, net premiums, and 3 per cent. interest. Bonuses then declared were at the uniform rate of 35*s.* per cent. per annum over the quinquennium, as compared with 34*s.* per cent. per annum on the preceding quinquennial occasion. In 1914 the net new business amounted to 3,594 policies for £423,846; the net life premium income to £217,895; claims by death to £118,060, and by survivance to £51,973; expenses to about 14·7 per cent. of the premiums, a moderate proportion considering the low average amount of policy; funds at close of year to £2,877,198, in addition to investment reserve fund of £40,000, staff superannuation fund of £19,821, and capital redemption fund (premiums, £1,755) of £11,965; and the interest yield to about £4 4*s.* per cent., after deduction of income tax. Total assets, £3,021,598.

PROVINCIAL INSURANCE COMPANY, LIMITED.

Head Office: Provincial Buildings, Bolton; London Office: 6 Old Jewry, E.C. Established 1903. On December 31, 1914, capital authorised, £250,000; subscribed, £180,000; paid up, £90,000, in shares of £10 with £5 paid. Dividend for 1914, 5 per cent., less income tax.

Transacts fire and accident business. In 1914, fire premiums, £29,668; employers' liability and accident premiums, £22,665. At close of year, after provision for dividend, general reserve fund amounted to £25,000, fire fund to £11,867, and accident fund to £9,066; balance of £4,253 was carried forward. Assets, December 31, 1914, £156,765.

PRUDENTIAL ASSURANCE COMPANY, LIMITED.

Head Office: Holborn Bars, London, E.C. Founded 1848. Capital authorised, £2,000,000; subscribed, £1,000,000. Amount of each share, £1, all of which paid up. Dividends and bonuses paid in 1914 amounted to £600,000, or 60 per cent., free of income tax. Dividends and bonuses paid in 1915 amount to £550,000, equal to 55 per cent., free of income tax. Industrial policyholders and agents participate in profits to a large extent (*see below*). Price of shares, £9 15*s.*; yield, £6 16*s.* 7*d.* per cent.

The Company transacts an enormous business, both in its ordinary and industrial departments, and is by far the largest insurance Company in the United Kingdom, measured by funds and premium income. The life department is very economically managed. In 1914 the new ordinary life assurances amounted to £6,318,843 and the total ordinary life premium income (increased by £115,107) was £5,035,625, or nearly quadruple that of any other British life office. Claims cost £4,014,658, of which those for £2,795,018 were in respect of endowment assurances, in which a large proportion of the business is done. Expenses of management, including commission, absorbed about 8·2 per cent. of the premiums, showing one of the smallest expense ratios in com-

mission-paying life offices, notwithstanding the vast magnitude of the new business. The ordinary life assurance fund rose during the year from £45,574,580 to £47,024,190, after the transfer of £500,000 to investments reserve fund. The average rate of interest on the ordinary life funds was about £4 3*s.* 8*d.* per cent., after deduction of income tax. Valuations are made annually, that for 1914 having been made on a net premium basis by the H^{M} Table, in combination with 3 per cent. interest. Reversionary bonuses for each of the 10 years ending in 1906 had been declared at the rate of 30*s.* per cent., but this rate was increased in 1907 to 32*s.* per cent., which was again declared in 1908 and 1909, and increased to 34*s.* per cent. in 1910, which rate was also paid in 1911. This was increased in 1912 to 36*s.* per cent., and that rate was also declared for 1913. The Chairman stated that the surplus for 1914 would have provided the same bonus, but in view of the uncertainty of the outlook it was decided to allot a substantial amount to investments reserve fund, to increase the carry-forward, and to declare a bonus of 30*s.* per cent.

In 1914 the industrial premium income (increased by £301,746) was £8,176,202, and the outgo for claims and surrenders £3,588,782, and for expenses £3,177,033, after allowing for £357,416 received from approved societies, Expenses, absorbing 38·8 per cent. of the premiums are high in this department (although lower than in any other industrial office), owing to cost of weekly collection of premiums, the number of policies for small sums being nearly 40 per cent. of the population of the United Kingdom, the average premium being about 2*d.* a week. In 1914, 16,567 agents were employed in the weekly collection of premiums in connection with 18,137,454 policies. A scheme was approved by the shareholders, in July 1907, admitting industrial policyholders and the superintendents, assistant superintendents and agents to specified shares in the profits of the Company. In the industrial branch the bonuses were from 2½ per cent. to 60 per cent. on sums assured, according to number of premiums paid. At the close of 1914 the funds in the industrial branch amounted to £40,649,318, having been increased during the year by £1,747,639, after the transfer of £250,000 to investments reserve fund and £300,000 to Courts (Emergency Powers) Act reserve. The total assets of the Company amounted on December 31 last to the sum of £91,202,344, showing an increase during the year of £4,209,341. The investments reserve fund amounted to £1,750,000, and the directors state that the assets, compared with standards available at the date indicated, were in their belief in the aggregate fully of the value stated, less that fund. The Company's head offices cover three acres, and form quite an architectural feature of Central London. In 1912 the Company formed six approved societies under the National Insurance Act, 1911, relating to (1) men and (2) women not included in other sections, and (3) domestic servants, (4) laundresses, (5) miners, and (6) agricultural and rural workers. A new section of business was opened for supplementary sickness insurance, the premiums in 1914 amounting to £10,315.

RAILWAY PASSENGERS ASSURANCE COMPANY.

(*See also* **North British and Mercantile Insurance Co.**)

Head Office: 64 Cornhill, London, E.C. Established 1849. On December 31, 1914, capital authorised and subscribed, £1,000,000; paid up, £200,000, in shares of £10 with £2 paid up, now vested in the North British and Mercantile Insurance Company, which acquired this Company's business as from January 1, 1910.

Premium income in 1914 was £420,206. The interest earnings, less income tax, amounted to £23,129. Claims for £182,345 were paid. Departmental funds, apart from provision for outstanding claims, £160,989, and profit and loss balance £255,706, together represent over 99 per cent. of the premium income. The profit and loss account shows dividends of £31,388 paid on account of 1914. Total assets, December 31, 1914, £781,083. The Company has recently introduced some new features in accident, employers' liability and motor-car insurance, as explained in official leaflets. Its "Fireside Policy" gives under one contract a complete indemnity against losses through fire, burglary and accidents to domestic servants.

REFUGE ASSURANCE COMPANY, LIMITED.

Head Office: Oxford Street, Manchester; London Office, 133 Strand. Established 1864. Capital authorised, subscribed and paid up, £300,000. Amount appearing in revenue accounts for 1914 as dividend to shareholders and shareholders' profits, £46,767.

A large industrial and life assurance office. In 1914 in the ordinary life department new sums assured amounted to £2,513,140; total life premium income to £1,308,112; expenses to £130,811 (10 per cent. of the premiums); claims to £552,343, of which £263,047 related to matured endowments; and the life fund at close of year, increased by £725,339, to £7,790,489. The net interest yield was about £3 16*s.* 6*d.* per cent. Policyholders take 90 per cent. of the valuation profits, which on the last annual occasion, at close of 1914, on a strong basis (H^{M} Mortality Table, net premiums, and 3 per cent. interest), provided bonuses at rate of 28*s.* per cent. The surplus carried forward amounted to £98,783, after transferring £70,000 to investment reserve fund.

The industrial branch in 1914 showed premiums (increased by £45,297), £2,215,846; claims, £1,034,438; commission and expenses, £1,039,323 (about 46·9 per cent. of the premiums), and funds at close of year (increased by £219,764), £2,717,467. Total assets of the Company, December 31, 1914, £11,082,956, showing an increase during the year of £1,020,103. The directors certify that in their belief the assets were in the aggregate fully of the value stated, less investment reserve fund of £275,000.

RELIANCE MARINE INSURANCE COMPANY, LIMITED

Head Office: Exchange Buildings, Liverpool; London Office: 27 Cornhill, E.C. Established 1881. Capital authorised and subscribed, £500,000; paid up, £100,000. Shares, £10 each, with £2 paid. Dividend for 1914, 17½ per cent., less income tax. Price of shares, £6 7*s.* 6*d.*; yield, £5 12*s.* 11*d.* per cent.

In 1914 the net premiums amounted to £137,480, of which first year's settlements absorbed about 22·2 per cent., the balance of underwriting account carried forward, after settlements and expenses, being £92,735. Interest earnings, less income tax, amounted to £13,326. The 1913 underwriting account was closed with a profit of £21,444, after transfer of £13,000 to suspense account. At close of 1914 the reserve fund amounted to £150,000; the balance of profit and loss account, after provision for dividend, to £48,367, and the total assets to £431,669.

ROCK LIFE ASSURANCE COMPANY.

(*See* **Law Union and Rock Insurance Company, Ltd.**)

ROYAL EXCHANGE ASSURANCE CORPORATION.

Head Office: Royal Exchange, London, E.C. Established 1720. Capital stock subscribed and paid up, £689,220. Dividend in respect of 1914, 10 per cent., free of income tax. Price of stock, £184 10*s.*; yield, £5 13*s.* 10*d.* per cent.

A large and varied business in fire, life, marine and accident insurance is transacted by this influential Company, which was established contemporaneously with its neighbour, the London Assurance Corporation.

Fire Department.—In 1914 the fire premium income amounted to £856,038, and losses (£503,048) and expenses (£335,668) to £838,716. The receipts from interest credited to the fire account (less income tax) amounted to £5,077. A sum of £33,579 was transferred to profit and loss from the fire account, and the fire fund at the end of the year amounted to £392,415.

Life Department.—A quinquennial valuation of the life business was made at the close of 1910 on a strong basis: O^{M} Mortality Table, net premiums, and 3 per cent. interest. Six-sevenths of the divided surplus

was allocated to participating policyholders, and provided a compound bonus of 28*s.* per cent. per annum. In 1914 in this department the net new sums assured amounted to £808,512; the total net premium income to £367,540; consideration for annuities to £69,437; expenses to about 14·7 per cent. of the premiums; claims to £295,659, those by death (£246,786) being "approximately the same as the amount expected"; and life and annuity funds at close of year to £4,627,427. The interest yield on the life fund, after deduction of income tax, was £4 0*s.* 1*d.* per cent.

MARINE DEPARTMENT.—In 1914 the marine premiums amounted to £359,008; losses to £248,457; and expenses to £36,191. Interest, less income tax, produced £3,923. £20,000 was transferred to profit and loss account, and the marine fund amounted to £309,524 at close of year.

GENERAL ACCIDENT DEPARTMENT.—The premiums in 1914 amounted to £262,013; losses to £105,767; and expenses to £104,936. Interest, less tax and bad debts, produced £4,997; the sum of £46,284 was transferred to profit and loss account, and the general accident fund at close of year amounted to £187,588, including provision of £82,783 for outstanding claims.

SINKING-FUND premiums amounted to £30,381, and the fund at close of year to £113,410.

The TRUSTEE AND EXECUTOR account showed receipts from fees of £5,045, and expenses, £3,520, the balance of £1,525 being transferred to profit and loss account.

GENERALLY.—The total net amount transferred at end of 1914 to profit and loss account from other departments was £101,387, and interest earnings, &c., less income tax, produced £53,745, but expenses not charged to the departments and defrayed out of this account amounted to £28,215. The balance in profit and loss (also described as general reserve fund) at close of year, after provision of £68,922 for full year's dividend and £135,000 for depreciation of investments, was £462,556. Total assets, December 31, 1914, £7,307,657.

ROYAL INSURANCE COMPANY, LIMITED.

Head Offices: 1 North John Street, Liverpool; 24–28 Lombard Street, London, E.C. Established 1845. On December 31, 1914, capital authorised, £3,000,000; subscribed, £2,944,680; paid up, £441,702. Shares for £10 with £1 10*s.* paid. Dividend for 1914 was 28*s.* per share, less income tax. Price of shares, £24 15*s.*; yield, £5 13*s.* 1*d.* per cent. Prospects of maintenance and gradual increase of this dividend are favourable, for the reserves are strong and the history of the Company never shows an occasion on which the dividend (apart from early instances of bonus from life profits) has been less than that paid in the previous year. As from January 1, 1909, the Royal acquired control of the British and Foreign Marine Insurance Company, Limited (*q.v.*). The amount of Four per Cent. Redeemable Debenture stock on December 31, 1914, was £843,800.

One of the most important insurance companies in the kingdom. The fire business of the Royal largely exceeds that of any other British office, and its life business is also extensive. In the Royal are now merged the Queen, Midland Counties, Cumberland and Westmoreland Fire, Kent Fire, United Kent Life, and Lancashire insurance companies, some of which were large institutions themselves. The Company in 1907 acquired the business of the Northern Accident Insurance Company of Glasgow, and established an accident department. Through the acquisition of the control of the British and Foreign Marine Company, above referred to, a valuable organisation was secured, and this new branch of the Company's operations has been extended through the Company's influence, with profitable results. The management of the Royal has always been distinguished by great ability, enterprise, and liberality.

In the course of 1912 the Company acquired the shares of the British Engine Boiler and Electrical Insurance Company (*q.v.*), and in 1913 it acquired control of the Horse, Carriage and General Insurance Company.

FIRE DEPARTMENT.—In 1914 the fire premium income amounted to £4,124,063, the losses to £2,352,711, and the expenses to £1,518,570. The fire trading surplus in 1914 amounted to £252,782, or about 6·1 per cent. of the premiums, which was transferred to profit and loss account. The fire fund amounted at the close of 1914 to £3,300,000. The reserve fund remained at £1,600,000, and balance of profit and loss, after provision for the Debenture interest and dividend, and carrying £300,000 to general contingencies fund and £25,000 to superannuation fund, amounted to £1,117,063. The funds, apart from capital and the life, accident, marine, general, employers' liability and superannuation funds, amounted to £6,017,063, or to about 146 per cent. of the year's fire premiums.

LIFE DEPARTMENT.—A quinquennial valuation was made at the close of 1914 on a strong basis: O^M and $O^{M(5)}$ Tables for assurances, with O^M net premiums and 3 per cent. interest. Participating policyholders are entitled to four-fifths of the divisible surplus, and on the last and several previous occasions bonuses were declared at the satisfactory all-round rate of 30*s.* per cent. per annum. In 1914 the net new sums assured amounted to £1,572,346; the total net premium income to £836,349, and consideration for new annuities to £52,868; expenses to about 12·8 per cent. of the premium income; claims to £722,871; and the life and annuity funds at close of year (increased by £136,197) to £11,445,792. Interest seems to have yielded about £3 18*s.* 8*d.* per cent. on the life funds, after deduction of income tax. Capital redemption premiums, £8,763; fund, £44,974.

ACCIDENT DEPARTMENT.—In the employers' liability section the premiums in 1914 amounted to £223,806, and after payment of claims and expenses the fund on December 31, 1914, amounted to £318,868, including £136,000, the estimated amount of liability for outstanding claims. In the personal accident section the premiums amounted to £108,125, and the relative fund at close of 1914 to £78,903, inclusive of £16,930 for outstanding claims. General insurance premiums, £924,071; fund, £493,185.

MARINE ACCOUNT (*see also* BRITISH AND FOREIGN MARINE INSURANCE COMPANY, LIMITED, whose figures are included).—Premiums in 1914, £684,364. Transfer to profit and loss, £92,809. Fund, December 31, 1914, £1,030,129.

The total assets of the Company amounted on December 31, 1914, to £22,685,829.

ROYAL LONDON AUXILIARY INSURANCE CO., LTD.

Head Office: Finsbury Square, London, E.C. Registered August 8, 1910. Capital authorised, £500,000, in 450,000 £1 shares and 100,000 10*s.* shares. Issued, £130,000, in 80,000 £1 shares with 10*s.* paid and 100,000 10*s.* shares fully paid. Paid up, £90,000. No dividend was paid for 1914.

Formed to act as an auxiliary Company to the Royal London Mutual Insurance Society, Limited. That Society had, in order to transact fire and general insurance business, established an auxiliary fund of £100,000 (of which £20,000 was paid up) by the issue of certificates to its members, who subscribed for the same.

In the 15 months ending December 31, 1914, new life policies were issued for £743,441; the total life premiums were £100,017, life expenses, £29,754, and life fund at end of period, £131,236. An interim bonus at rate of £1 6*s.* per cent. was declared on all fully participating life policies becoming claims in 1915. Fire premiums, £41,819, and fund, £13,892, after transfer of £6,190 from profit and loss. Accident and general premiums, £10,399; transfer to profit and loss, £1,903; fund, £2,496. Capital redemption premiums, £886; fund, £2,646. Total assets, December 31, 1914, £267,274, including purchase of business account, £30,000, and preliminary and establishment expenses, £3,286. Debit balance of profit and loss account carried forward to 1915, after writing off £7,993 in respect of foreign reinsurance business, £7,628.

ROYAL LONDON MUTUAL INSURANCE SOCIETY, LTD.

Head Office: Finsbury Square, London, E.C. Established in 1861 as the "Royal London Friendly Society." Registered as a limited Company on July 31, 1908. Transacts ordinary and industrial life assurance.

ORDINARY BRANCH.—Life premiums amounted to £37,973; interest earnings to £7,723; claims, £6,933; expenses, inclusive of commission, to about 7·1 per cent. of the premiums. Life fund, December 31, 1914, £219,358. Reversionary bonus for year on ordinary participating life policies was £1 6*s.* per cent.

INDUSTRIAL BRANCH.—Premiums, £1,336,434; interest, £131,838; expenses, inclusive of commission, about 44·2 per cent. of the premiums. Fund, December 31, 1914, £3,665,839, after transferring £50,000 to investment reserve fund and £30,000 to Courts (Emergency Powers) Act reserve.

Sickness premiums, £21; fund, £2,544.

Total assets, December 31, 1914, £4,177,123, being certified as fully of value stated in directors' opinion, taking into account investment reserve fund of £200,000.

ROYAL NATIONAL PENSION FUND FOR NURSES.

Head Office: 15 Buckingham Street, Strand, London, W.C. Founded 1887. Incorporated 1888.

A mutual institution for providing pensions to nurses of any amount, commencing at any age. Sickness and accident policies are issued in connection with pension policies assuring 5*s.* to 20*s.* a week in cases of incapacity from work through the causes indicated. There are no shareholders or directors' fees. Nurses can pay premiums monthly, quarterly, or at irregular intervals as suits their convenience. Under returnable scale premiums are returnable with compound interest, less (except after seven years) a small deduction for working expenses. Profits from working of fund are allocated quinquennially, also from the donation bonus fund. Policyholders who through no fault of their own find themselves in difficulty as to payment of premiums or in pecuniary difficulty or want have a first claim on the "Junius S. Morgan benevolent fund," which is also employed for augumentation of pensions.

ANNUITY ACCOUNT, 1914.—Premiums, £125,120; interest, £63,168; fund, £1,758,832. Sickness account: premiums, £1,404; sick pay, £1,761; fund, £2,876; donation bonus fund, £36,282. First thousand nurses' tontine fund, £7,676. Investments reserve fund, £75,824. Council's investment reserve fund, £5,229. Trust account, £53,217. Junius S. Morgan benevolent fund, £20,063. Total assets at close of year, £1,962,431.

SALVATION ARMY ASSURANCE SOCIETY, LIMITED.

Head Office: 107 Queen Victoria Street, E.C. Established under the Friendly Societies Acts in 1867 as the Methodist and General Assurance Society, Limited, and subsequently registered under the Companies Acts, 1862; whilst in 1904 the name was changed as above. The Company is a branch of the Salvation Army organisation, and there is no share capital. Seventy-five per cent. of the profits go to the policyholders and 25 per cent. to the Salvation Army.

In the financial year ended June 30, 1915, in the ordinary life department, the new sums assured amounted to £163,226, the premiums to £84,882, consideration for new annuities to £2,794, claims to £35,880, expenses to £11,038, and fund at close of year to £553,767. In the industrial department the premiums were £295,524; claims, £115,888; expenses, £135,871; and the fund at close of year, £530,802. Investments reserve fund on June 30, 1915, amounted to £21,585, and total assets to £1,115,768.

SCEPTRE LIFE ASSOCIATION, LIMITED.

Head Office: 40 Finsbury Pavement, London, E.C. Established 1864. Capital authorised, £100,000; subscribed, £45,425; paid up, £10,485. Amount of each share, £5. Paid up: £1 on 8,735, £5 on 350. Dividend for year ending December 31, 1914, 6 per cent. Last quinquennial bonus to shareholders, paid 1914, 34*s.* 9*d.* per share.

This Company is an excellently managed and pros-

perous undertaking. It makes a special feature of the assurance of abstainers, having both a "Temperance" and a "General" section. During 1914 new sums assured amounted to £100,365, total net life premium income to £74,456, and claims to £87,204, including £17,824 under endowment policies and £37,945 paid under whole-life policies in lifetime of assured through application of profits. Mortality incidence was favourable, ratios of "actual" to "expected" deaths being 70.2 per cent. in "General" and 46.5 per cent. in "Temperance" section. Expenses (including valuation expenses) absorbed 14.4 per cent. of the premium income. The life fund at close of year amounted to £1,219,174, the interest yield being about £4 0*s.* 11*d.* per cent. after deduction of income tax.

A quinquennial valuation was made on December 31, 1913, on a very strong basis, $O^{M(5)}$ Tables of Mortality being used, in combination with interest at 2½ per cent. Divisible surplus amounted to £153,197, shareholders and participating policyholders being entitled to one-tenth and nine-tenths respectively. Bonuses to policyholders were at the same high rate as at last quinquennial valuation: in "Temperance" section, £2 2*s.* per cent. per annum on whole-life assurances and £1 18*s.* on endowment assurances; and in "General" section, £1 16*s.* per cent. per annum on all kinds of participating assurances.

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY.

Chief Office: 35 St. Vincent Place, Glasgow; London Office: 1 Threadneedle Street, E.C. Established 1826.

One of the strongest life offices in the country, with very fine and consistent bonus traditions. The Company is founded on the mutual system, and never during its long history have the reversionary additions to the sums assured made by way of profit fallen below the compound rate of 30*s.* per cent. per annum over a valuation period, while for the last three quinquenniums (to 1900, 1905 and 1910) they were at the compound rate of 35*s.* per cent. per annum. The bonuses are above the average in cases of recent policies, and are very much so in cases of old policies; and there seems good reason for anticipating their continuance at a high standard under normal circumstances, for the valuation in 1910 was made on one of the strongest bases used by British offices, giving ample scope for the almost automatic accumulation of profits on a generous scale. The $O^{M(5)}$ Mortality Table was used for assurances, in combination with O^{M} net premiums and 2½ per cent. interest, a large special reserve (greatly more than an ordinary net premium valuation would give), and representing about 22 per cent. of the annual premium income, being made for expenses and contingencies.

Few offices are so attractive to new entrants as the Scottish Amicable. Its "minimum premium" system is worth the attention of proposers who wish to obtain the largest possible immediate assurance for such a premium as they can afford. Under this system bonuses at the compound rate of 30*s.* per cent. per annum are discounted and applied to reduce premiums. The policies are entitled to share in any bonuses declared above 30*s.* per cent. (as on the last three occasions), and are only liable to diminution in the event of the declared rate of bonus falling below that standard.

In 1914 the net new sums assured amounted to £763,886; the total net premium income to £429,639; consideration received for new annuities to £31,348; claims by death to £249,002 (about 75 per cent. of "expectation"); and funds at close of year (increased by £287,072) to £6,492,287. Expenses of management absorbed about 12·3 per cent. of the premiums, leaving a large margin in the reserve carried forward to provide for expenses and contingencies. In comparing the ratio of expense with those of other companies it should be borne in mind that a large part of the business is effected under the "minimum premium" system described above, and if full premiums had been charged on all policies the proportionate expense to premium income would, of course, have been considerably less.

The interest yield, after deduction of tax, was about £3 18*s.* per cent., and therefore greatly in excess of that assumed for valuation purposes.

SCOTTISH BOILER INSURANCE AND ENGINE INSPECTION COMPANY, LIMITED.

Chief Office: 174 West George Street, Glasgow; London Office: 128A Queen Victoria Street, E.C. Established 1881. The Yorkshire Insurance Company acquired the shares of this Company in 1913, and reports are not now issued.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

Head Office: 28 St. Andrew Square, Edinburgh. London Office: 13 Cornhill, E.C. Established 1831. This mutual life assurance Company has been consistently well managed, and has given excellent bonus results to its participating members. The last quinquennial valuation was made on March 1, 1913, for assurances by the O^M Table, on a net premium basis, with additional reserves, at 3 per cent. interest. Although £85,567 was applied in writing down securities to market prices or providing for depreciation, the bonuses declared were at the "compound" rate of 30*s.* per cent. per annum, as compared with 26*s.* per cent. per annum on the previous quinquennial occasion. Interim bonuses on policies which become claims before the next quinquennial investigation to be at the rates per cent. per annum of 25*s.* in case of death and of 30*s.* in case of survivance.

During the financial year ending March 1, 1915, the net new sums assured amounted to £634,929; the net premium income to £426,856, of which expenses absorbed about 13¼ per cent.; consideration for new annuities to £9,291; net claims by death to £338,045, being "well within the expectation," and by survivance to £134,330; and the funds at close of year to £6,285,115, showing an increase during the year of £58,110, after carrying £44,252 to investment suspense account. The interest yield was £3 19*s.* per cent., after deduction of income tax.

SCOTTISH INSURANCE CORPORATION, LIMITED.

Chief Office: 115 George Street, Edinburgh; London Office: 14 Nicholas Lane, E.C. Established 1877. Formerly "Scottish Accident, Life and General Insurance Company, Ltd." Name changed to above, 1911. Capital authorised, £500,000; subscribed on December 31, 1914, £150,000, of which paid up £30,000, in 30,000 £5 shares with £1 paid. Dividend for 1914, 20 per cent., less income tax. Price of shares, £3 2*s.* 6*d.*; yield, £6 10*s.* 1*d.* per cent.

Company transacts fire, accident, motor-car and burglary insurance, and also ordinary life business.

The following figures relate to 1914:—

Accident and General Insurance Account.—Premiums, £76,760; interest, £1,719; claims, £37,794; expenses and commission, £30,118; bonus to policyholders, £4,811. After transferring £6,489 to profit and loss account the fund at end of year was £41,735, including £7,956 for outstanding claims.

Employers' Liability Insurance Account.—Premiums, £41,576; interest, £1,171; claims paid, £23,083; expenses and commission, £16,312; fund at end of year, £29,386, including £11,755 for outstanding claims, after transferring £1,378 to profit and loss account.

Fire Department.—Premiums, £14,844; claims, £7,674; expenses, £5,823; fire fund at end of year, £6,938, after transferring £488 to profit and loss account.

Life Department.—In 1914 net new sums assured amounted to £150,568, total net premium income to £42,884, and funds at end of year to £313,257. Expense ratio, 15·2 per cent. Net interest yield, £4 per cent. Quinquennial valuation of life department, December 31, 1910, was made by $O^{M(5)}$ Table, at 3 per cent. (as against 3½ per cent. on the last occasion), on net premium basis. Reversionary bonuses were declared at the following rates: £1 10*s.* per cent. per annum in the "Abstainers'" section, and £1 5*s.* per cent. per annum in the "General" section.

Company's total assets, December 31, 1914, £508,598. The investment reserve fund amounted to £20,000.

After provision for dividend, amounting for the year to £5,720, reserves, excluding paid-up capital and investment reserve, and after deduction of sums set aside for outstanding losses, exceeded 81 per cent. of last year's premium income (excluding life).

SCOTTISH LEGAL LIFE ASSURANCE SOCIETY.

Head Office: 84 Wilson Street, Glasgow. Established 1852. A mutual industrial life assurance institution enrolled under the Friendly Societies Act.

The report for the year ended December 31, 1914, shows receipt of £402,852 in premium collections; interest and other earnings of £46,941; and outgoings of £188,993 for claims, surrenders, &c., and of £178,162 for expenses. Assets, December 31, 1914, £1,278,772.

SCOTTISH LIFE ASSURANCE COMPANY, LIMITED.

Head Office: 19 St. Andrew Square, Edinburgh; London Office: 9 & 10 King Street, E.C. Established 1881. Capital authorised, £500,000; subscribed, £250,000; paid up, £50,000. Shares of £5 each with £1 paid. Dividend for 1914, 10 per cent., free of income tax. Price of shares, £1 15*s.*; yield, £7 4*s.* 2*d.* per cent.

This strong young Company has always been well and cautiously managed, and has a fine bonus record. At each valuation the bonuses declared have been at the rate of £2 per cent. for each year of assurance (except the year of entry) during the quinquennium. In addition to its life assurance business the Company has a small but profitable accident department. The last quinquennial valuation was made on December 31, 1910, on strong basis: O^M and $O^{M(5)}$ Mortality Tables and 3 per cent. interest, net premiums only being valued, with special reserves for limited payment policies. Under a new arrangement, participating policyholders are entitled to 95 per cent. of the profits from the life and annuity business, subject to the proviso that the directors have the right to make the proportion anything between 92½ to 95 per cent. during the now current quinquennium. It is claimed that under these regulations the Company is placed in a position of guaranteeing to its policyholders a larger proportion of profit than any other British proprietary insurance office.

During 1914 the net new life business amounted to £420,300 in sums assured. The net life premium income was £208,920. Expense ratio amounted to about 15·7 per cent. of premiums, and was decidedly low, especially considering youth of Company and proportionately large amount of new business. A sum of £9,985 was received as consideration for new annuities. Claims by death amounted to £73,632 (the mortality experienced during the year being described as low), and by survivance to £30,005. Life funds rose from £2,035,350 to £2,172,973. The interest yield, less income tax, was about £4 2*s.* 6*d.* per cent. Indications of future profits from economy, interest and longevity are favourable in each case.

Accident premium income in 1914, £6,594. Fund at close of year, £7,175, including £329 reserved for outstanding claims.

Total assets, December 31, 1914, £2,276,660. Investment reserve fund, £10,000. Balance of profit and loss account, after provision for dividend, £9,693.

SCOTTISH METROPOLITAN ASSURANCE CO., LTD.

(*See* **London and Lancashire Life and General Assurance Association, Limited.**)

SCOTTISH PROVIDENT INSTITUTION.

Head Office: 6 St. Andrew Square, Edinburgh; London Office: 3 Lombard Street, E.C.; West-End Office, 17 Pall Mall, S.W. Established 1837.

One of the largest life offices in the United Kingdom, admirably managed in every respect, and very attractive to new entrants. The Institution is founded on the mutual principle, all divisible profits belonging to the policyholders entitled to participate, after (except in endowment assurance cases) the premiums accumulated at 4 per cent. compound interest equal in amount the original sum assured. The premiums charged for whole-life policies are considerably lower than average

rates in British offices; as stated in the Company's prospectus, "generally £1,200 or thereby being secured from the first for the same yearly premium as would elsewhere assure (with profits) £1,000 only, with the prospect to those who prove good lives (for whom exclusively the surplus is reserved) of eventually receiving very considerable additions." How large these additions are may be estimated from the fact that during the septennium ended in 1908 more than 70 per cent. of the representatives of members who died were entitled to bonus yielding on an average an addition of nearly 50 per cent. to their policies. Endowment policies are now granted, however, on which bonuses are to be allotted on the compound system, and interim bonuses at 30*s.* per cent. per annum were payable thereon in cases of death before the septennial division of profits at end of 1908. This compound rate has been increased for the current valuation period to that declared at the septennial valuation on December 31, 1908, viz. 35*s.* per cent. per annum.

Valuations are now quinquennial, and the first was made on December 31, 1913, on a strong basis: O^{M} Tables of Mortality, net premiums, and 3 per cent. interest, except in cases of some of the oldest policies, which were valued at 3½ per cent. It was reported that after making these provisions the value of the assets as shown in the balance sheet considerably exceeds the amount stated therein. The gross surplus over the quinquennium amounted to £1,609,988, including £51,897 paid during the quinquennium as interim bonuses. The securities were revalued, and the sum of £100,000 was written off the investments, and the investment reserve fund was increased from £140,000 to £300,000. The sum of £304,204 was "reserved for future accumulation," and £853,887 was applied to providing bonuses. Bonuses on whole-of-life policies sharing for the first time ranged from 12 to over 24 per cent. of the sums assured, in reversionary form, and bonuses on policies which had previously participated were at the uniform reversionary rate of £7 10*s.* per cent.

In 1914 the net new sums assured amounted to £1,654,664 (the largest amount in the history of the Society, although for more than 30 years the new business in each year has exceeded a million sterling); the total net premium income amounted to £746,052, in addition to £83,472, being consideration for new annuities granted; expenses about 13·5 per cent. of the premiums, which is a lower expense ratio than the average, although the Society's premiums are at considerably lower rates than are usually charged; claims by death to £809,987 (79 per cent. of the "expectation"), and by survivance to £36,607; the funds at close of year to £15,963,692, and the interest yield to about £3 17*s.* 3*d.* per cent. after deduction of income tax. Total assets, December 31, 1914, £16,429,859.

SCOTTISH TEMPERANCE LIFE ASSURANCE CO., LTD.

Head Office: 109 St. Vincent Street, Glasgow; London Office: 3 Cheapside, E.C. Established 1883. Capital authorised and subscribed, £100,000; paid up, £25,000. Amount of each share, £1, with 5*s.* paid. Dividend for 1914, 5 per cent. per share, with bonus of 11 per cent. per share in addition, both dividend and bonus being subject to income tax. It was announced in the annual report for 1912 that the sum carried to the shareholders' fund from the quinquennial valuation profits at the close of the year is sufficient to provide a bonus addition to the ordinary dividend at the rate of 10 per cent. per annum during the now current quinquennium. Price of shares, 15*s.* 6*d.*; yield, £5 7*s.* 5*d.* per cent.

The Company is enterprising and well and economically managed; it has a "Temperance section," in which abstainers are allowed special terms, and also an accident department. The last valuation, as at December 31, 1912, was made on a net premium basis by the O^{M} Table of Mortality, combined with 3 per cent. interest, with additional reserves for contingencies. The policyholders' share of the divisible surplus amounted to £176,440, which was sufficient to provide a bonus at the rate of 30*s.* per cent. per annum ("compound" for whole-of-life policies and "simple" for endowments) over the quinquennium in the immediate bonus section, and bonuses of varying amounts on policies entitled to deferred profits. At the last preceding valuation the bonus to immediate profit policies was 28*s.* per cent., with a limitation, now removed, to one half-year's bonus for the first year of assurance. £12,500 was transferred to shareholders' bonus and dividend fund, and a balance of surplus, amounting to £29,948, is carried forward in the life fund.

During 1914 the net new sums assured amounted to £574,690, of which £555,890 was life business and £18,800 was capital redemption business; the total net life premium income (increased by £11,361) was £231,279. Claims by death cost £48,243, and claims by survivance, £42,088. Expenses were about 14·5 per cent. of the premiums. The life fund was increased from £2,073,777 to £2,284,074, and the interest yield, after deduction of income tax, was about £4 0*s.* 6*d.* per cent. The incidence of mortality in this Company has always been remarkably favourable, and continued to be so in 1914.

Leasehold redemption assurance premiums in 1914, £4,648; relative fund, December 31, 1914, £23,093.

In 1914 the accident premiums amounted to £4,567, the accident claims to £1,527, and the fund at close of year to £11,713. Total assets, December 31, 1914, £2,397,176.

The Company has a special life assurance scheme in connection with terminable mortgage loans, suitable to persons who desire to become possessors of their own dwelling-houses, or who wish to invest otherwise in heritable property of a good class. Loans are repayable by instalments over a fixed term of years, and in event of the borrower's death before the repayments are completed the balance then remaining is immediately cancelled.

SCOTTISH UNION AND NATIONAL INSURANCE CO.

Head Office: 35 St. Andrew Square, Edinburgh; London Office: 5 Walbrook, E.C. This Company was formed in 1878 by the amalgamation of the Scottish Union and Scottish National Companies, which were founded respectively in 1824 and 1841. Capital authorised, £6,000,000; subscribed, £5,086,380; paid up, £300,000. Some of the shares are for £20, with £1 paid; others are for £10, with £3 15*s.* paid. Dividend for 1914 was at the rate of 20 per cent., less income tax. Price of £1 paid shares, £2 15*s.*; yield, £7 5*s.* 6*d.* per cent.; price of £3 15*s.* paid shares, £10 15*s.*; yield, £7 4*s.* 5*d.* per cent. During 1906 the Company acquired the business of the Lancashire and Yorkshire Accident Insurance Company, Limited. The Company took over the whole assets of the acquired Company, and in exchange issued Five per Cent. Accident Debenture bonds, redeemable in 1926, for £133,609. During 1913 the Company acquired the undertaking of the City of Glasgow Life Assurance Company (*q.v.*). In 1914 the Company acquired the shares of the Maritime Insurance Company.

Fire Department.—In 1914 premium income (increased by £6,321) amounted to £764,167, and the claims (£456,138) and expenses (£276,677) to £732,815. The interest earnings on the fire funds amounted to £14,769, and the excess of the departmental income over expenditure, after adjustment of reserve (representing 50 per cent. of the premium income) for unexpired risks, amounted to £42,961, which as profit realised was transferred to profit and loss account.

Life Department.—The net new life business in 1914 amounted to £783,794 in sums assured; the total net life premium income to £538,769; expenses to about 13·9 per cent. of the premiums; claims by death £426,700, and by survivance £93,473; and life funds at close of year to £8,335,443 after writing down investments by £412,944. These figures include those of the City of Glasgow Company. The net interest yield on the life fund seems to have been about £3 19*s.* 3*d.* per cent.

The Company received £115,908 as consideration for new annuities.

The quinquennial valuation of the life department was made on December 31, 1914. Separate valuations of the old "Scottish Union" and "Scottish National" policies were made, the same tables having been used and the same rate of interest assumed as at the last investigation, except that the 1912 Government Annuity Table was used for annuities.

The valuation of the "Scottish Union and National" policies (being those belonging to the present series, dating from the fusion of the "Scottish Union" and "Scottish National" Companies) was made, as on the former occasion, by the O^M 3 per cent. tables. It is stated that "the life funds as reduced would admit of substantial bonuses being declared in certain sections. Having regard to the shrinkage which has taken place in the values of securities since the outbreak of war and the uncertain outlook as to future values, the directors deem it prudent to postpone any declaration of profits until the year following the year in which peace is concluded."

In order, however, that no prejudice may be done to the holder of any with-profit policy in force on December 31, 1914, whose policy becomes a claim before such declaration is made, it was decided to allocate to such policies the following interim bonuses:—

Scottish Union Policies.—A bonus for five years at the same rate as was declared for the quinquennium ending December 31, 1909.

Scottish National Policies.—£1 per cent. on the sum assured for each full year's premium paid subsequent to December 31, 1909.

City of Glasgow Policies.—£1 per cent. on the sum assured for each completed year of assurance subsequent to December 31, 1912.

Scottish Union and National Policies.—(*a*) Early Bonus.—£1 per cent. on the sum assured for each full year's premium paid subsequent to December 31, 1909. (*b*) Deferred Bonus.—The same rate as was declared for the quinquennium ending December 31, 1909, but not exceeding a total of £1 per cent. per annum on the sum assured from date of vesting.

Accident Account.—This includes all transactions in Great Britain in connection with accidents or sickness, other than the liabilities provided for in the employers' liability account. The premiums in this account amounted to £19,382, and the fund at close of year to £11,426, including £1,735 in respect of outstanding claims. after transfer of £3,777 to profit and loss account, of which £412 represented interest earnings.

Employers' Liability premiums in Great Britain amounted to £35,440, and the relative fund at close of year to £32,723, including £15,003 for outstanding claims, after transfer of £8,429 to profit and loss, including interest earnings of £799. Sinking-fund premiums, £8,182; relative assurance fund, £62,823. Profit transferred to profit and loss, £3,749.

The General Account, including transactions not referred to above, showed premiums of £20,777 and a fund at close of year of £12,763, including £2,375 for outstanding claims, after transfer of £5,025 to profit and loss account, of which £443 represented interest earnings. The balance of profit and loss account brought forward from 1913, after provision for net dividend payable in 1914, was £208,774. To this have been added £42,961, balance transferred as above shown from fire account, balance of £5,025 from general assurance account, of £8,429 from employers' liability account, of £3,749 from sickness account, and of £3,777 from accident account. Interest and fees not carried to other accounts (less income tax, interest on accident bonds and irrecoverable agents' balances) produced £32,136; £40,000 was transferred to profit and loss from investment contingency account. Provision for the gross dividend at 20 per cent. absorbs £60,000, the sum of £8,016 is set aside as the cost of acquiring the Maritime Insurance Company, £132,056 was written off investments, £100,000 transferred to investment reserve, and £15,000 set aside for possible bad debts due to the war, and thereafter £26,395 is carried forward in profit and loss account. The general reserve fund at the close of the year amounted to £300,000. The reserves and balances carried forward (apart from capital and the life, annuity, general, employers' liability, sinking-fund assurance, investment reserve, and accident funds) represent over 92 per cent. of the fire premium income. Total assets, December 31, 1914, £10,282,988.

Maritime Insurance Company. — Premiums, £286,461. Losses, 1914 and previous years, £175,756. After transferring £20,625 to profit and loss the underwriting fund amounted to £314,505, including £92,278 for unsettled claims. General reserve fund, £180,000. Profit and loss balance, £69,290. Total assets, December 31, 1914, £673,408.

SCOTTISH WIDOWS' FUND LIFE ASSURANCE CO.

Head Office: 9 St. Andrew Square, Edinburgh; London Office: 28 Cornhill, E.C. Established 1815.

This great mutual life office is by far the largest British life assurance institution not possessing an industrial department, measured by premium income and accumulations. It has a splendid bonus history. The bonuses declared had been, for the last five successive septennial divisions ending with 1908, at the very high "compound" rate of £1 14*s.* per cent. per annum, which gives an over-average amount of bonus in the case of the youngest policies and greatly increased bonuses to those of long duration. The original sums assured have in many instances been doubled, in extreme cases they have been more than trebled, through these reversionary additions.

Valuations are now quinquennial and the first was made at the close of 1913 on a strong basis: O^M and $O^{M(5)}$ Mortality Tables for assurances, net premiums, and 3 per cent. interest. The loading reserved as a provision for future expenses and profits represented 22 per cent. of the premiums. £167,710 was written off sundry investments, and the balance of estimated depreciation in securities was provided by transferring the reserve fund of £400,000 to a specific investment reserve fund. Thereafter the sum of £2,149,000 was

utilised in declaring bonuses at the same rate as that above referred to, and £54,996 was carried forward as undivided surplus to the next division of profits. Interim bonuses will be paid until the next valuation at the full compound rate of £1 14*s.* per cent. per annum.

In 1914 the net new sums assured by life policies amounted to £2,090,861; the total net life premiums to £1,453,531; consideration for new annuities to £155,632; expenses to 9.9 per cent. of the premiums; claims to £1,231,646 (those by death being only 82 per cent. of the "expectation"); and life funds at close of year, increased by £472,367, to £21,995,035, exclusive of investment reserve fund of £400,000. which provided for the difference between the book values and market values on December 31, 1913, of certain bonds which will mature for repayment at par on fixed dates. Capital redemption premiums, £1,931; fund, £7,216. Total assets, December 31, 1914, £22,949,047. Interest, after deduction of income tax, yielded about £4 0*s.* 3*d.* per cent. in 1914.

SEA INSURANCE COMPANY, LIMITED.

Chief Offices: Exchange Buildings, Liverpool; 31 Cornhill, London, E.C. Established 1875. Capital authorised and subscribed, £500,000; paid up, £500,000. Shares for £10 each, fully paid. The dividend for 1914 was 16*s.* per share, subject to tax. Price of shares, £17 5*s.*; yield, £4 14*s.* 11*d.* per cent.

On April 15, 1912, the shares of the Company were made fully paid by calling up the balance of £400,000 unpaid, and at the same time declaring a bonus of £400,000, free of income tax, out of the reserve fund.

This Company is one of the strongest transacting marine insurance business, and has been excellently managed. The aim of the directors is evidently to increase the reserve through accumulation of profits. But the effect of this policy is, of course, automatically to manufacture increased profits from interest. The report issued in January last shows that there was a surplus of £34,927 from the closing of the 1913 underwriting account, whilst the receipts from interest and fees, less income tax, amounted to £40,424. Premiums in 1914 amounted to £468,795, of which first year's settlements absorbed 25·9 per cent. The underwriting balances carried forward to 1915 (including suspense account of £106,872) amount to £430,191. After provision for dividend, £165,227 is carried forward in profit and loss. The reserve fund amounts to £145,000. Assets on December 31 last, £1,303,510.

STANDARD LIFE ASSURANCE COMPANY.

Head Office: 3 George Street, Edinburgh; London Office: 83 King William Street, E.C. Established 1825. Capital authorised and subscribed, £500,000; paid up, £120,000. Shares for £10, with £2 8*s.* paid. Dividend in 1915, 6*s.* per share, free of income tax. Price of shares, £4 17*s.* 6*d.*; yield, £7 9*s.* 6*d.* per cent.

The Standard Life Assurance Company, whilst transacting a large business in the United Kingdom, is the best-known British office in many other parts of the world. In India its policyholders are more numerous than those of any of its British contemporaries. The Company has also branches in China, Mauritius, Ceylon, the Straits Settlements, the Philippines, Egypt, Canada, South Africa, the West Indies, Belgium, Spain, Hungary, Argentina and Uruguay. In all these countries it has deservedly obtained a high reputation for liberality and honourable dealing.

The last quinquennial valuation was made as at November 15, 1910. The mortality tables used for assurances were the O^{M} Table for home and temperate climate business, and special experience tables for other business. The rate of interest assumed was 3 per cent. For valuation purposes the securities were written down by £120,037. The portion of the divisible surplus allocated to participating policyholders (after payment of £61,433 for interim bonuses) was £772,800, which provided reversionary bonuses of 30*s.* per cent. per annum.

In financial year ending November 15, 1914, the new sums assured, less reassurances, amounted to £1,713,646; the total net life premium income to £997,992; consideration for new annuities to £53,268; claims by death to £746,964; claims under endowments matured to £249,213; expenses were about 18·8 per cent. of the premiums; and life funds at close of year (increased by £123,505) were £13,602,219. Capital redemption premiums, £2,748; consideration for "annuities certain," £1,496; fund, £13,155. Interest on life funds (less tax) produced £535,717, the net yield having been about £4 0*s.* 9*d.* per cent. Total assets, December 31, 1914, £14,112,966.

STANDARD MARINE INSURANCE COMPANY, LIMITED.

(*See* London and Lancashire Fire Insurance Co., Ltd.)

STAR ASSURANCE SOCIETY.

Head Office: 32 Moorgate Street, London, E.C. Established 1843. Capital authorised and subscribed, £100,000; paid up, £5,000, in shares of £1 each with 1*s.* paid up. One-tenth of the surplus arising from quinquennial valuations has been appropriated to shareholders. Their proportion of the surplus from the last valuation, on December 31, 1913, was £53,018, equivalent to about 10*s.* 7*d.* on each share of the present denomination. Price of shares, £2 2*s.* 6*d.*

Up to the passing of the special Act of Parliament referred to hereunder the Society was known as the Star Life Assurance Society, and its business was entirely confined to life assurance.

During 1911 the Company obtained enlarged powers through a special Act of Parliament, enabling it to transact practically all kinds of insurance business, but it is understood that these powers will be very gradually and cautiously exercised, and up to the close of last year the only new departure was represented by capital redemption insurance business. For the current quinquennium the annual dividend is 2*s.* 2*d.* per share. The Society has always had a strong Wesleyan connection, and the new articles of association provide that at least seven members of the board shall be accredited members of that community.

F. P. I.

THE FRIENDS' PROVIDENT INSTITUTION was established in 1832 as a Mutual Assurance Association by Members of the Society of Friends (Quakers), and originally confined its operations to Friends and their near relatives; but the Directors now have power, and are prepared, to grant assurances to persons not connected with Friends.

LOW PREMIUMS

ECONOMICAL MANAGEMENT

Head Office: BRADFORD, YORKS.

London Office: 17 GRACECHURCH STREET, E.C.

Birmingham Office: 44 WATERLOO STREET.

The quinquennial valuation on December 31, 1913, was made for assurances on a net premium basis by the O^M Table of Mortality, in combination with 3 per cent. interest. The proportion of the surplus ascertained at the valuation applicable to division amongst participating policyholders, notwithstanding the writing down values of securities by £149,700, permitted the distribution of bonuses on policies issued prior to January 1912 at the compound rate of 21*s.* per cent. per annum over the quinquennium, representing in individual cases additions varying from 21*s.* to 38*s.* per cent. per annum on the original sums assured. On policies effected after January 1, 1912, a simple reversionary bonus of 30*s.* per annum was declared.

During 1914 the net new sums assured amounted to £1,086,574, the net life premium income to £506,926, and the claims by death (said to be in number considerably within "expectation") to £323,279. The expense ratio of the life business was about 16·0 per cent. of the premiums. The total life and annuity funds at close of year amounted to £6,991,411. The interest yield, after deduction of income tax, was £4 1*s.* 9*d.* per cent. Capital redemption premiums, £11,135; fund, £14,796. Total assets, December 31, 1914, £7,264,791.

STATE ASSURANCE COMPANY, LIMITED.

Head Office: State Insurance Buildings, Liverpool; London Office: 12–13 Nicholas Lane, E.C. Established 1891. Capital authorised, £800,000; subscribed, £560,000; paid up, £70,000. Shares for £8, of which paid up, £1. Dividend for 1914, 12½ per cent., less income tax. Price of shares, £1 17*s.* 6*d.*; yield, £6 14*s.* 9*d.* per cent.

Fire Department.—In 1914 in this department the net premiums (increased by £24,125) amounted to £234,176, losses to £150,276, and expenses to £83,799. £7,942 was transferred from profit and loss account, and the fire fund thereafter amounted to £78,059, representing the reserve for unexpired risks at the rate of one-third of the year's premium income.

Accident and General Department (including employers' liability business).—In this section the premiums amounted to £53,143, the claims to £26,185, and the expenses to £19,461. The sum of £6,506 was transferred to profit and loss account, and the departmental fund at end of year (being reserve for unexpired risks at one-third of the premium income) amounted thereafter to £17,714.

Profit and Loss Account.—The balance brought forward in this account from 1913, less provision for dividend and directors' fees for that year, was £7,878. As stated above £6,506 was transferred from accident account, but £7,942 was taken out of this account and added to the reserve for unexpired fire risks. Earnings from interest and fees, less income tax and expenses, amounted to £4,999. Investment fluctuation account, £20,000. General reserve fund, £60,000. After provision for dividend for 1914 the balance carried forward is £2,690. Total assets, December 31, 1914, £303,557.

SUN INSURANCE OFFICE.

Head Office: 63 Threadneedle Street, London, E.C. Established 1710. On December 31, 1914, capital authorised, £2,500,000; subscribed, £2,400,000; paid up, £480,000, of which £120,000 was provided out of profit and loss account for 1910, and £240,000 in 1912. Shares for £10, with £2 paid. Dividend declared in 1915, 14*s.* per share, less tax. Price of shares, £11 10*s.*; yield, £6 7*s.* 3*d.* per cent.

This leading Office, particularly well known in the Metropolitan district, is senior by a century of its namesake and ally for business purposes, the Sun Life Office. It now transacts accident and employers' liability business, as well as fire, burglary and general insurance.

Fire Department.—In 1914 the net premium income amounted to £1,502,340, the losses to £842,262 (about 56·1 per cent.), and the departmental expenses of management, inclusive of commission, to £572,939. After adjustment of liability for unexpired risks (40 per cent. of the premiums) the trading profit, apart from interest, was £114,818, or about 7·6 per cent. of premiums. The interest credited to the fire account was £68,730, so that the total profit in the fire department was £183,548, which was transferred to profit and loss account. The fire insurance fund at close of year 1914, including reserve for unexpired risks, amounted to £2,100,936.

Accident Department.—The premiums amounted to £7,589 and the credited interest to £287. The accident fund at close of year amounted to £8,980, including £945 for outstanding claims. £12 was transferred from the profit and loss account to accident account.

Employers' Liability Department, &c.—The premiums amounted to £98,774, and the fund at the close of the year to £151,556, including £47,046, estimated liability for outstanding claims. Interest credited was £4,805, the trading profit amounted to £6,180, the sum of £10,985 being transferred to profit and loss account. Burglary and General premiums amounted to £27,022, and after transfer of £6,377 to profit and loss account, inclusive of interest earnings of £815, the relative fund amounted to £25,809.

Earnings from interest not credited to the departmental funds and fees, after deduction of income tax, bad debts, and loss on exchange, amounted to £41,491, and the net profits transferred from departments to £200,898, making a total profit of £242,389, while the dividend at 14*s.* per share, less income tax, required £158,200. £10,000 was carried to war contingency fund, £10,000 to pension fund (thereafter amounting to £62,642), £75,000 to investment suspense fund, and £75,000 applied in writing down investments. The balance carried forward in profit and loss account after provision for dividend was £260,063. Dividend reserve amounted to £150,000; and the total funds, exclusive of capital investments suspense and pension funds, after provision for dividend and outstanding claims, to £2,757,957. This represents about 162 per cent. of the year's total premium income—more than four times the amount set aside on a standard of 40 per cent. to provide for unexpired risks. To maintain the dividend at 14*s.* per share a profit of less than 3 per cent. on the trading, in addition to interest earnings, seems sufficient.

SUN LIFE ASSURANCE SOCIETY.

Head Office: 63 Threadneedle Street, London, E.C. Established 1810. Capital authorised, £1,000,000; subscribed and paid up, £480,000. Amount of each share, £10, fully paid (*see below*). The shares were formerly for £10 with £7 10*s.* paid, but the directors announced in the report for 1911 that the funds admitted of £120,000 being applied in paying up £2 10*s.* per share, and declared a special dividend of £2 10*s.* per share for that purpose. The dividend (including bonus) for the current quinquennium will be £1 per share per annum. Price of shares, £21 5*s.*; yield, £4 16*s.* 5*d.* per cent.

This Company is closely associated for business purposes with its elder brother, the Sun (Fire) Insurance Company. It is an enterprising and "up-to-date" institution, and has within the last few years broken new ground in accepting proposals, under certain conditions, without the formality of medical examination; also premiums, when required, by monthly payments. These innovations and a rapid development of agency organisation have led to much increase in the business. In the Metropolitan district, in which it has a number of branch offices, the Company is very strongly represented. It has an accident and miscellaneous section, as well as its leading life assurance department.

In 1914 the net new life sums assured amounted to £2,692,862; the total net life premium income to £979,666; the interest earnings on the life fund to £364,614 (representing £4 2*s.* 8*d.* per cent., after deduction of income tax); the claims ("well within expectation") to £567,981, including bonuses; and the expenses (including transfer of £5,500 to superannuation fund) to about 15·1 per cent. of the premium income. The life fund at close of year, increased by £548,990, after transfer of £2,437 to proprietors' fund, amounted to £9,278,833.

The quinquennial valuation was made on December 31, 1911, on a strong basis: O^M and $O^{M(5)}$ Tables of Mortality, net premiums by the O^M Table, and 3 per cent. interest. The policyholders' share of the profits amounted to £843,306, and sufficed to provide reversionary bonuses varying from 22*s.* to 86*s.* per cent. per annum over the quinquennium, according to age at entry and duration of policy.

The annuity account for 1914 shows receipts for consideration for annuities amounting to £152,722. Annuities for £142,453 were paid, and the annuity fund at close of year was £1,633,349. The leasehold fund at close of year was £1,590,084, premiums having been received in this section for £128,082. The accident premiums during the year were £5,126, and the fund at the close of year £11,583 (including £380 for outstanding claims). The total assets at close of year were £12,725,146. The Company acquired as from December 31, 1905, the life assurance business of the Patriotic Assurance Company, whose life funds amounted to £208,619 at the close of 1904, its premium income during that year having been £22,432. Reversionary bonuses are guaranteed to Patriotic participating policyholders of 22*s.* 6*d.* per cent. per annum.

THAMES AND MERSEY MARINE INSURANCE CO., LTD.

(*See* **Liverpool and London and Globe Insurance Co.**)

TRUSTEES, EXECUTORS AND SECURITIES INSURANCE CORPORATION, LIMITED.

Head Office: Winchester House, London, E.C. Established 1887. Capital authorised and fully subscribed, £1,050,000, £525,000 being in Four-and-a-Half per Cent Cumulative Preference stock and £525,000 in Ordinary stock. There are issues of £400,000 Four-and-a-Quarter per Cent. Irredeemable First Mortgage Debenture stock, and of £350,000 Four-and-a-Quarter per Cent. Consolidated Debenture stock. Dividend on Ordinary shares for year to May 31, 1915, 5 per cent., less income tax. Price of Preference stock, £90; yield, £5 2*s.* 7*d.* per cent.; price of Ordinary stock, £82 10*s.*; yield, £6 4*s.* 3*d.* per cent.

The Company undertakes the duties of trustee and executor under wills, &c., and owns the building known as Winchester House, Old Broad Street, E.C., together with safe deposits there and at Liverpool. Assets, May 31, 1915, £2,081,181.

UNION ASSURANCE SOCIETY.

(*See* **Commercial Union Assurance Company, Limited.**)

UNION MARINE INSURANCE COMPANY, LIMITED.

(*See* **Phœnix Assurance Company, Limited.**)

UNITED DOMINIONS INSURANCE COMPANY, LIMITED.

The business of this Company has been acquired by the British Dominions General Insurance Company, Limited (*q.v.*).

UNITED KINGDOM TEMPERANCE AND GENERAL PROVIDENT INSTITUTION.

Head Office: 196 Strand, London, W.C. Established 1840.

A very successful mutual life office with an excellent bonus history. Lives of total abstainers from alcoholic beverages are assured in a separate section from those of others. The mortality incidence has been satisfactory in both sections, but that in the "Temperance" section has been especially so. Consequently, one of the greatest sources of profit has been the longevity of the members.

The last quinquennial valuation was made at the close of 1910 by one of the strongest standards used in British life offices: O^M and $O^{M(5)}$ Mortality Tables, in combination with net O^M premiums, 2½ per cent. interest, and special additional reserves. The surplus ascertained amounted to £1,358,969, whereof a sum of £1,235,653 was apportioned as profits amongst participating policyholders and the large balance of £123,316 was carried forward. The declared bonuses were respectively at the compound rates of £2 2*s.* and £1 15*s.* per cent. per annum in the "Temperance" and "General" sections for whole-of-life policies. The bonuses to abstainers were remarkably large, and those to non-abstainers much exceeded average rates in British offices. Being on the compound system, they ranged in the "Temperance" section from £2 2*s.* to £4 13*s.*, and in the "General" section from £1 15*s.* to £3 3*s.* per cent. per annum on original sums assured.

In 1914 the new sums assured amounted to £1,080,551 after deduction of reassurances; total net premiums increased by £17,938 to £757,799; expenses amounted to about 10·5 per cent. of the premiums; claims by death to £419,449 (66·7 per cent. of the "expected" in the "Temperance" section and 77 per cent. in the "General" section); claims by survivance to £189,192; and the assurance funds were increased by £374,249 to £10,337,121. The average interest yield, after deduction of income tax, in 1914 was about £3 17*s.* 2*d.* per cent. The Institution is one of the most attractive to new entrants in the country.

UNIVERSITY LIFE ASSURANCE SOCIETY.

Head Office: 25 Pall Mall, London, S.W. Established 1825. Capital authorised, £600,000; subscribed, £598,000; paid up, £29,900. Amount of each share, £100, of which £5 paid up and added. Dividend, 1915, 5 per cent. (5*s.* per share), free of income tax. Bonus from quinquennial valuation at April 30, 1915, £1 4*s.* per share, as on the previous quinquennial occasion. Shareholders are entitled to one-tenth of divisible valuation surplus.

The University is a high-class office in every respect, and has in the past given exceptionally handsome profits to its policyholders. Yet its new business is one of the smallest in the country. This arises partly from the restriction of the business "to the assurance of the lives of past or present members of the universities, public schools, and other approved educational institutions." The restriction as regards policyholders has operated favourably in one way, the longevity of the assured being above that usually experienced by life offices. The incidence of mortality might, however, be better

still if there were a greater amount of new business, as a considerable influx of recently selected lives is always beneficial. The Society is attractive to persons eligible as policyholders.

The valuation in 1915 was made on a very strong basis: $O^{M(5)}$ Mortality Table, in combination with net premiums and interest at $2\frac{3}{4}$ per cent. Bonuses then declared on participating assurances were at the rate of £1 10*s.* per cent. per annum. This is considerably less than the average rate declared by the Society, and the decrease is partially explained by the fact that £30,178 was written off securities, and £25,000 carried to investment reserve fund. Bonuses vest at once in case of policies on which six years' premium have been paid, and on payment of the sixth years' premiums in case of more recently effected policies.

During the last financial year, ended April 30, 1915, net new sums assured amounted to £107,557; the total net premium income to £69,976; expenses to about 11·3 per cent. of the premiums; claims by death to £64,355; and total life funds at end of year to £952,120. The net interest yield on the total funds was about £4 0*s.* 2*d.* per cent.

VULCAN BOILER & GENERAL INSURANCE CO. LTD.

Head Office: 67 King Street, Manchester; London Offices, 78 Queen Victoria Street, E.C., and 39 Victoria Street, Westminister. Established 1859. Capital authorised, £500,000; subscribed, £375,000; paid up, £187,500. Amount of each share, £5, with £2 10*s.* paid. Dividend for 1914, 10*s.* 6*d.* per share, and a bonus of 2*s.* per share, both less income tax. Price of shares, £8 17*s.* 6*d.*; yield, £7 6*s.* per cent.

In 1914 premiums and fees, &c., amounted to £163,629, sundry commissions and receipts to £6,169, and losses and expenses to £123,075. Interest and transfer fees produced £10,013, and the balance in the revenue account at the close of year was £66,056. £46,175 of this amount was applied in payment of dividend and bonus; £7,500 was added to the current risk and reserve fund, raising it to £82,500; £1,200 to the superannuation fund, raising it to £7,890; and £10,481 carried forward. Total assets, December 31, 1914, £331,890.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.

Head Office: Steelhouse Lane, Birmingham; London Office: 20-23 Holborn, W.C. Established 1841.

This Society transacts ordinary life, industrial and sickness insurance business. There are no shareholders. In 1914 the total premium income in the ordinary life account amounted to £226,220; the claims to £92,766, including £33,749 for endowment insurances; expenses to about 14·9 per cent.; and the fund at close of year to £1,248,918, the net interest yield on the ordinary fund being about £3 12*s.* per cent. The amount of the new ordinary assurances in 1914 was £459,465.

In the industrial department the premium income was £776,621, of which expenses, inclusive of commission and special new business charges, absorbed about 47·2 per cent. Claims and surrenders, £335,245. Fund at close of year, £998,593. Sickness, &c., premiums, £2,887. Fund, £62,333.

Total assets of Society, according to balance sheet on December 31, 1914, £2,393,818.

The annual valuation on December 31, 1914, was made for industrial policies by the $O^{M(5)}$ Table of Mortality, and for ordinary policies by the O^{M} Table. Net premiums in the ordinary section were valued on the assumption that the policies were effected one year after actual entry at the increased age, and in the industrial department on the assumption that they were effected five years after the date of issue at the increased age. The rate of interest assumed was 3 per cent. The surplus ascertained amounted in the life assurance departments to £67,805, and in the sickness department to £515. Out of these sums £25,000 was set aside as a reserve on account of the Courts (Emergency Powers) Act, and £6,000 as an investment reserve fund. A reversionary bonus of 26*s.* per cent. was declared on sums assured on all participating policies in the ordinary class which had been two years in force, this distribution requiring £28,230, leaving £9,091 to be carried forward.

WESTMINSTER AND GENERAL LIFE ASSURANCE ASSOCIATION.

(*See* Guardian Assurance Company, Limited.)

WEST OF SCOTLAND INSURANCE OFFICE, LTD.

Head Office: 131 St. Vincent Street, Glasgow; London Office: 3 Princes Street, E.C. Established 1886. Capital authorised, £250,000; subscribed, £175,000; paid up, £35,000, in 35,000 shares of £5 each with £1 paid. Dividend in respect of 1914, 15 per cent., less income tax. Price of shares, £3 2*s.* 6*d.*; yield, £4 19*s.* 2*d.* per cent.

This Company now transacts accident and burglary in addition to fire insurance. It has an excellent record, and its business has been profitable throughout. In 1914 the premium income amounted to £47,585 (fire, £41,374; employers' liability, £3,527; burglary and general, £2,684); interest, less income tax, to £3,588; losses to £22,299 (fire, £20,832; employers' liability, £967; burglary, &c., £500); and expenses to £16,572. The fire fund amounted to £36,550; employers' liability fund to £7,304; burglary and general fund to £1,074; investment reserve fund to £4,503, and general reserve fund to £40,000. In addition there was a balance of £2,260 after provision of dividend, the balances and reserves, apart from capital and investment reserve, thus amounting to £87,188, representing about 183 per cent. of the year's premium income. The financial position is, therefore, very strong. Assets, December 31, 1914, £136,453.

WORLD MARINE AND GENERAL INSURANCE COMPANY, LIMITED.

Head Office: 3–4 Royal Exchange Buildings, London, E.C. Established 1894. Capital authorised, £250,000; subscribed on December 31, 1914, £250,000; paid up, £100,000, in shares of £5 each with £2 paid. Dividend for 1914, 5 per cent., free of income tax.

In January 1912 this Company purchased 96,221 shares of the London and Provincial Marine and General Insurance Company, Limited (*q.v.*), for £108,248 12*s.* 6*d.* in cash, with a view to closer fusion in the working of the two companies, which will carry on business as heretofore. *See* YORKSHIRE INSURANCE COMPANY.

In 1914 the premiums amounted to £244,073, of which first year's settlements absorbed about 22 per cent. At close of year the general reserve fund amounted to £30,000, and the balance of underwriting account to £178,491. After provision for the dividend £40,975 was carried forward in profit and loss. Total assets on December 31, 1914, £374,315. The Company holds 17,409 Yorkshire Insurance Company's shares of £5 each with 10*s.* paid, which are taken at cost (£5), and represent assets to the extent of £87,045.

YORKSHIRE INSURANCE COMPANY, LIMITED.

Chief Offices: St. Helen's Square, York; Bank Buildings, Princes Street, E.C. Established 1824. Capital authorised, £1,000,000; subscribed (December 31, 1914), £845,856; paid up, £125,289. This consists of 160,126 shares of £5 each, with 10*s.* paid, and 45,226 fully-paid shares of £1 each. The Company was registered as "limited" in 1908, when the original £10 shares were subdivided. Dividend declared in 1915, 50 per cent., free of income tax, giving 10*s.* on the fully-paid £1 shares and 5*s.* on the £5 shares with 10*s.* paid. Price of partly paid shares, £4 10*s.*; yield, £6 15*s.* 9*d.* per cent.; price of fully paid shares, £10 2*s.* 6*d.*; yield, £6 0*s.* 6*d.* per cent. Shareholders are entitled to one-tenth of the profits in the life department, it being, however, provided that their share shall not be less than £15,000.

The Company, which has a strong local connection, transacts fire, life, marine, and accident business. In 1913 certain portions of the business of the Premier Insurance Company and the business and shares of the London and Provincial Marine and General Insurance Company and the Scottish Boiler Insurance and Engine Inspection Company were acquired. In 1914 an arrangement

was made with the Guarantee Society for the purchase of that Company's shares by an exchange of Yorkshire shares and cash; the figures relating to the same now appear in the Yorkshire Company's report.

FIRE DEPARTMENT.—In 1914 the fire premiums amounted to £455,800, losses to £247,147 (54·2 per cent.), and departmental expenses to £173,204. Interest earnings, &c., less tax, in this department amounted to £7,794. £40,091 was carried from fire to profit and loss account. The sum of £182,320 was reserved as a provision for unexpired risks, being 40 per cent. of the premiums, at close of year.

LIFE DEPARTMENT.—In 1914 the net new sums assured amounted to £603,843; total net premium income to £209,675; consideration for new annuities to £70,002; claims by death to £82,474; by survivance, £27,160; annuities paid to £59,592; expenses (allowing for annuity business) to about 13 per cent.; total life fund at close of year, after appropriation of £3,000 to profit and loss account as shareholders' profits, and £32,693 to investment reserve to £2,595,435, and interest yield, after deduction of income tax, to about £4 4*s.* 7*d.* per cent.

A quinquennial valuation was made at December 31, 1914, on a strong basis: for assurances, O^M and $O^{M(5)}$ Mortality Tables, net premiums, and 3 per cent. interest. As regards the assets, the Stock Exchange securities were taken at the prices of December 31, 1913, as suggested by the Board of Trade. To meet the depreciation on this basis, £32,693 was transferred to investment reserve fund, and as a further provision for depreciation due to the war a sum of £100,000 was transferred from the general reserve fund of the Company to investment reserve. This was estimated to be more than sufficient to meet reductions in value of all the Stock Exchange securities to the end of 1914. The surplus ascertained in the life and annuity funds was £212,400, of which £135,000 was allocated to participating policyholders and £15,000 to shareholders, while £62,400 was carried forward to the next valuation. Bonus additions to participating policies were on a liberal scale, providing increasing amounts according to duration of policies, varying from about 25*s.* to about 41*s.* per cent. per annum over the quinquennium, according to circumstances, and averaging 30*s.* per cent. per annum for both life and endowment policies. In abstainers' section additional reversionary bonuses were allotted of 4*s.* to whole-life policies and 2*s.* to endowment policies per cent. per annum.

CAPITAL REDEMPTION ACCOUNT.—Premiums, &c., £10,077; fund, £52,211.

EMPLOYERS' LIABILITY DEPARTMENT.—Premiums, £106,174. Fund at close of year, £83,595, consisted of £42,470, reserve for unexpired risks (at 40 per cent. of premiums), and £41,125, estimated liability for outstanding claims. A balance of £25,045 was carried forward in this account.

GENERAL ACCOUNT.—This includes insurance in following sections: Burglary, live-stock, motor-car, fidelity, plate glass, &c. Premiums in 1914 amounted to £308,420; balance carried forward, £41,754; reserved for unexpired risks, £109,732 (after deduction of expired risks).

ACCIDENT ACCOUNT.—Premiums, £14,986; claims, £8,613; carried forward, £5,558, after reserving £5,995 for unexpired risks and £1,347 for outstanding claims.

MARINE ACCOUNT.—Premiums, £430,047; claims, £232,271; fund, £456,550.

GENERALLY.—Total assets, December 31, 1914, including £31,754 in connection with Great Britain Mutual Life Assurance Society's business, £4,717,388. General reserve fund, £487,885. Investment reserve, £100,000. Dividend reserve, £20,000. Pension and guarantee fund, £11,665. Balance in profit and loss account, after provision for dividend to be paid in 1915, and transferring £60,000 to general reserve fund, £76,567

COLONIAL OFFICES.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY.

Head Office: Sydney, New South Wales. Established 1849. London Office: 37 Threadneedle Street E.C. Transacts both ordinary and industrial life assurance business.

In 1914 the net new sums assured amounted in the ordinary department to £6,563,369, and in the industrial department to £968,893. The total net ordinary life premium income was £2,641,566, of which expenses of management and commission absorbed about 13·4 per cent. In the ordinary department, consideration for new annuities granted, £50,587; claims by death, £1,051,549, and by survivance, £761,749; surrenders, £345,553. Ordinary funds rose during the year from £31,173,467 to £32,649,589. Industrial premium income, £248,825; relative funds, £582,167. Interest yield on mean life funds, £4 12*s.* 9*d.* per cent.

Annual valuations are made. The valuation on December 31, 1914, was made for all ordinary assurances, except contingent assurances, by the H^M Table of Mortality, with interest at 3 per cent., excepting that participating assurances for whole life at uniform premiums issued prior to 1903 were valued at 3½ per cent. Net premiums only were valued. The valuation surplus for the year in the ordinary department amounted to £1,139,953, of which £1,026,139 is divided. Since the Society's inception the surplus divided represents in cash form 36·3 per cent. of the premiums received on all policies in the ordinary department. In reversionary form the bonus additions range from 30*s.* to over 60*s.* per cent. per annum, according to class, age at entry, and duration of policies, indicating a very high standard. Total assets, December 31, 1914, £33,736,909.

CANADA LIFE ASSURANCE COMPANY.

Head Office: Toronto, Canada; London Office 15 King Street, Cheapside, E.C. Established 1847. Capital authorised and paid up, £205,479 9*s.* ($1,000,000), in 2,500 shares, fully paid, of £82 3*s.* 10*d.* each ($400). Dividends to shareholders per revenue account of 1914 amounted to £16,438. The amount distributed represented £6 11*s.* 6*d.* per share, or 8 per cent. on the capita

LONDON: SIR ISAAC PITMAN & SONS, LIMITED, 1 AMEN CORNER, E.C.

In 1914 the completed new business amounted to £3,098,589, the policies paid for during the twelve months covering assurances for £2,883,860; the total net premium income to £990,880, of which expenses absorbed about 24·4 per cent.; consideration for new annuities to £163,244; net interest earnings, &c., £577,721, yielding about £5 8*s*. 10*d*. per cent. on the funds; whilst gain on sale of securities (£28,030) and decrease in market value of assets on revaluation at end of year (£11,422) were given effect to in revenue account. Claims by death amounted to £442,418, and by survivance to £84,540. The funds, inclusive of paid-up capital, rose during the year from £10,624,619 to £11,183,979, of which £10,947,109 represented the assurance and annuity funds, and £31,390 shareholders' dividend fund.

Valuations for profit-distributing purposes are made quinquennially, the last having been made on December 31, 1914. The valuation was then made on a net premium basis by the H^M Table of Mortality, the rates of interest assumed being 3 per cent. for business written since 1900 and 3½ per cent. for previous business. After providing for all liabilities, for a contingent reserve of £41,096, and after allotment of £270,775 to those entitled to share during 1914, the net surplus is reported as £1,273,765. The report states that the surplus actually earned during 1914 amounted to £315,100, "which shows that the year 1914 was one of the best in the history of the Company." The reversionary bonus declared on quinquennial dividend life policies issued prior to 1900 was £1 10*s*. per cent. per annum. To policies issued in and since 1900 bonuses have been allotted by the "contributory method," and are said to have been "correspondingly satisfactory." Bonuses apparently do not vest until after five premiums have been paid.

COLONIAL MUTUAL LIFE ASSURANCE SOCIETY, LTD.

Head Office: Melbourne. Chief Office for United Kingdom: 33 Poultry, London, E.C. Established 1873.

In 1914 the sums assured by new life policies amounted to £1,646,564; the total net ordinary life premium income to £457,276; expenses, inclusive of commission but exclusive of taxes, to about 24·9 per cent. of the life premiums; claims by death to £155,726, and by survivance to £82,767; and the life funds at close of year to £3,783,301. The interest yield is reported to have been £4 12*s*. per cent.

As a result of the valuation made as at December 31, 1914, by the O^M Table of Mortality, in combination with 3½ per cent. interest, a reversionary bonus of £1 per cent. per annum was declared for 1914 with certain stipulations as to vesting of bonus and other provisions (see actuarial report.)

Company opened an industrial department in 1909. Industrial premiums for 1914, £90,591; industrial funds at close of 1914, £125,761. Industrial assets include the following item: "Extension of Organisation Account," £106,494. Accident premiums, 1914, £9,772; fund, £17,426.

CONFEDERATION LIFE ASSOCIATION.

This is a Canadian life office, and was established in 1871. Its head office is in Toronto, and it has a branch in the United Kingdom, with chief offices at Temple Bar House, 23–28 Fleet Street, London, E.C.

Capital: Subscribed, £205,480 ($1,000,000); paid up, £20,548 ($100,000). Shareholders' profit appearing in the revenue account for 1914 amounted to £4,871. Holders of participating policies are entitled to 90 per cent. of the profits from the participating section, and it is stated in the Company's prospectus that for the last 20 years the Company has actually paid to participating policyholders 95 per cent. of such profits.

In 1914 the new policies issued amounted to £2,397,757. The total net premium income amounted to £513,080, of which expenses, inclusive of commission, absorbed about 31 per cent. Claims by death amounted to £132,566, and by survivance to £100,721. The life funds were increased by £216,012, and amounted at the close of the year to £3,995,093. Interest earnings, less taxes, during the year produced about 5½ per cent. on the average amount of funds.

A valuation of the Company's affairs was made for all assurances issued at ordinary rates on December 31, 1914, by the $O^{M(5)}$ Table of Mortality (with exceptions referred to hereunder), in combination with interest at the rates of 4 per cent. for assurances effected before 1896, 3½ per cent. for assurances effected from 1896 to 1899 inclusive, and 3 per cent. for later policies. The American Tropical Experience Mortality Table was employed for all tropical business in combination with similar rates of interest. The reserve liability under assurances and annuities amounted to £3,546,851. The profits earned for participating policyholders since the Company's inception are said to represent 14·6 per cent. of all premiums received from them.

The Company makes a special feature of its guaranteed policy values, which seem to be computed on a liberal basis.

MANUFACTURERS' LIFE INSURANCE COMPANY.

A Canadian Company established in 1887. Head Office: Toronto; London Office: 7 Gracechurch Street, E.C. Paid-up capital stock at December 31, 1914, £61,644. Shareholders' fund at that date, inclusive of paid-up capital, £81,955. Dividends paid to shareholders in 1914, £4,931.

New assurances, 1914, £2,561,468; total net premium income, £647,264, of which expenses, inclusive of commission and taxes, absorbed about 30·8 per cent.; claims by death and survivance and dividends to policyholders (£39,940), £328,623. The death losses were £116,856. Interest earnings, £223,194. Total assets, December 31, 1914, £3,941,176.

Specially low rates of premium are charged on lives of total abstainers.

MUTUAL LIFE AND CITIZENS' ASSURANCE CO., LTD.

Head Office: Sydney, New South Wales; London Office: 1 Arundel Street, Strand, W.C. Established 1887. This Company represents an amalgamation of the Mutual Life Association of Australasia with the Citizens' Life Assurance Company, Limited, which took effect from January 1, 1908. In 1910 the Company absorbed the Australian Widows' Fund Life Assurance Society. The paid-up capital on December 31, 1914, amounted to £108,225. "Bonuses" paid to shareholders in 1914 amounted to £20,641.

In 1914 the net new ordinary life business amounted to £2,003,040; the total ordinary net life premium income to £796,245, of which expenses of management absorbed about 12·2 per cent.; interest earnings, less taxes, to £360,613 (representing about £4 15*s*. 11*d*. per cent. on the funds); claims by death to £186,349, and claims by survivance to £280,737. The ordinary funds amounted on December 31, 1914, to £7,878,549. In 1914 the industrial premiums amounted to £264,821, and the industrial fund at close of year to £1,173,716. Total assets, December 31, 1914, £9,376,370.

A valuation of the ordinary business was made on December 31, 1914, by the H^M Table of Mortality, in combination with interest at 3 and 3½ per cent. The reversionary bonuses in respect of the one year, 1914, were at the rate of £3 per cent. for whole-of-life policies with 10 years or more duration, and £2 5*s*. per cent. with five years' duration. Reversionary bonuses on endowment assurances were at lower, but very satisfactory, rates, ranging from £1 17*s*. to £2 2*s*. per cent., according to specimens given, for policies of five years' duration and longer.

NATIONAL MUTUAL LIFE ASSOCIATION OF AUSTRALASIA, LIMITED.

Head Office: Melbourne; London Office: 5 Cheapside, E.C. Established 1869.

In the year to September 30, 1914, the sums assured by new policies amounted to £3,576,869; the total net premium income to £1,042,509, of which expenses of management, inclusive of commission and taxes, absorbed about 16·8 per cent.; consideration for new annuities to £26,162; claims by death to £270,477, and claims by survivance or maturity to £189,543. The funds were increased during the year by £705,030 to £8,705,492, and seem to have earned about £4 19*s*. per cent in interest.

The last triennial valuation was made on September 30, 1913. The assurances were valued by the

H^M Table at 3½ per cent. interest, a small addition being made to the net premiums to cover initial expenses. The surplus amounted to £650,024. Reversionary bonuses ranged from 32*s.* to 48*s.* per cent. per annum over the triennium.

SOUTH BRITISH INSURANCE COMPANY, LIMITED.

Established 1872, as the "South British Fire and Marine Insurance Company of New Zealand." Head Office: Auckland, New Zealand; London Office: Jerusalem Chambers, Cornhill, E.C. On August 31, 1915, capital authorised, £2,000,000; subscribed, £1,000,000; paid up, £300,000, in 200,000 shares of £5 each, with £1 10*s.* paid. Dividend for financial year ended August 31, 1915, 4*s.* 6*d.* per share.

The Company is authorised to transact fire, marine and accident insurance business of every description. In year ended August 31, 1915, net premiums amounted to £553,297, interest earnings to £42,898, losses to £287,117, expenses and taxes to £159,064, and balance carried forward (after provision for dividend and transfer to reserve and other funds) to £48,410. Reserve fund, £280,000. Reinsurance fund, £240,000. Assets, August 31, 1915, £1,094,963.

SUN LIFE ASSURANCE COMPANY OF CANADA.

Head Office: Montreal; London Office: Canada House, 4 and 5 Norfolk Street, W.C. Incorporated 1865. Capital subscribed, £205,479 ($1,000,000); paid up, £51,370 ($250,000). Shareholders' proportion of profits declared in 1914, £8,615.

The new sums assured on policies issued in 1914 amounted to £6,609,727, and the total sums assured at close of 1914 were £44,856,129. Other figures for last year are as follows: Life premium income, £1,855,290, of which expenses and commission, making a small adjustment for cost of annuity business, absorbed about 27 per cent.; consideration received for new annuities, £514,991; claims by death, £380,091, and by survivance, £261,079; life and annuity funds at close of year (increased by £1,532,630), £12,739,750; interest yield, about £6 12*s.* 8*d.* per cent.

The expense ratio, as in most colonial life offices, is higher than is usual in this country. On the other hand, this is counterbalanced to a large extent by the higher interest yield than is obtainable by British life offices.

The quinquennial valuation was made as at December 31, 1912, by the $O^{M(5)}$ Table of Mortality, in combination with net premiums and interest at 3 per cent. for all policies issued since December 31, 1902 (about 79 per cent. of the policies), and 3½ per cent. for all policies issued previously. The reversionary bonuses ranged from about 22*s.* to about 46*s.* per cent. per annum over the quinquennium, according to age at entry and duration of policy, in cases of policies effected at Northern rates. The profit earned during 1914 is reported as £344,445, and the surplus in hand on December 31, 1914, as £1,336,395; or by the Canadian Government standard as £1,612,852.

WESTERN ASSURANCE COMPANY.

Established 1851. Head Offices: Toronto, and 14 Cornhill, London, E.C. Capital, £513,698: Preferred, £205,479; Ordinary, £308,219; both being in fully-paid shares. In 1914 3½ per cent. was paid on account of fixed cumulative dividends on Preferred stock.

Transacts fire and marine business. In 1914, fire premiums, £434,812; marine premiums, £217,395; interest, £19,125; fire losses, £290,965; fire expenses, £173,184; marine losses, £153,249; marine expenses, £41,355; loss on fire trading in 1914, £29,337; profit on marine trading, £22,791; balance of profit and loss account, carried to 1915, £145,497. Total assets, December 31, 1914, £767,847, securities being valued at market values as at June 30, 1914, for those in the United States, and as at December 31, 1913, for the remainder. The loss on the fire trading in 1914 is attributed to the effects of the European war and the depression in the Cotton market.

No railroad in the United States enjoys greater strength, either financially or physically, than the Pennsylvania, and no railroad is better prepared to handle expeditiously and economically the vast traffic that will probably come in 1916. The policy of the road has always been to prepare well ahead for the great cycles of prosperity that visit the United States every few years. Were it not for this policy it would be impossible to handle a largely increased traffic without adding very considerably to the cost of operating. In the next few months the results are anticipated to be exceptionally favourable, inasmuch as comparison will be made with a period when gross earnings were showing large shrinkages.

The Common stock of the *Railroad* is at present quoted about 61½ for the $50 share, at which the return from the 6% dividend is £5 3*s*. 4*d*. per cent.

BALTIMORE AND OHIO'S RECOVERY.

THE VALUE OF EFFICIENCY.

Recently we dealt with the financial condition of the Baltimore and Ohio Railroad, and showed the substantial improvement in its profit already effected, as well as the probable further expansion likely to occur; but there are certain features in connection with the development and operation of the property during the last five years since Mr. Willard became President that seem worthy of special attention at the present time as indicating the really remarkable efficiency with which the railroad is now operated. The stockholders are, indeed, fortunate in having secured the services of Mr. Willard in such a critical period of the Company's affairs.

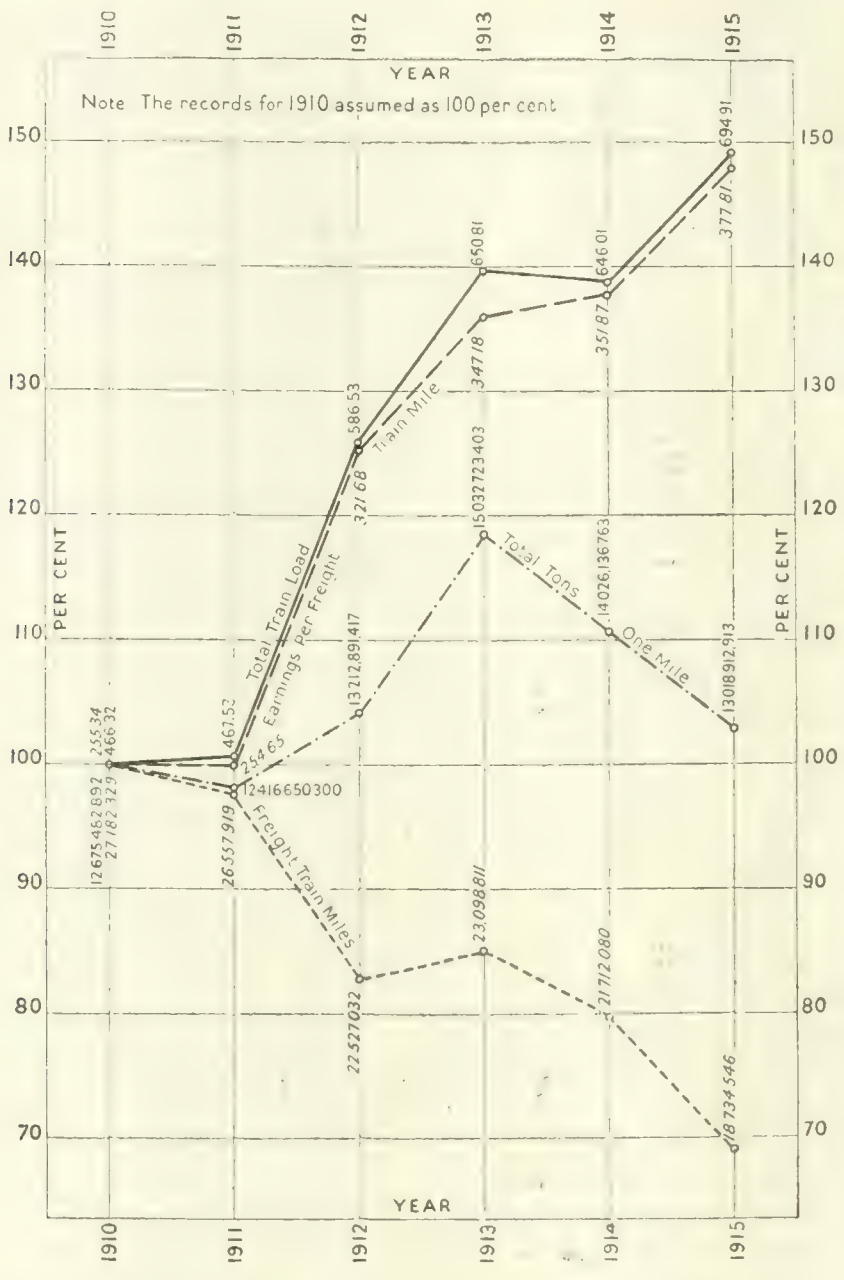
A good test of the operating efficiency of a railroad is found in the percentage of gross earnings chargeable to the account of "Conducting Transportation." The percentage of gross earnings charged against this account by the Baltimore and Ohio Company during the year just ended was 37.3, as compared with 40.3 the preceding year, and while the ratio for the year was 37.3%, in the month of June it was only 31.1%, in July 31.0%, in August 29.4%, in September it was 30.3%, and in October 30.4%. In short, the operating results for the last few months show that with a subnormal business such as the Company had until quite recently, and with ordinary weather conditions, the railroad can be so operated that conducting transportation will absorb not more than 31 or 32% of the gross earnings, except during the cold winter months, and that ratio, in connection with the low average ton-mile rate which obtains upon the Baltimore and Ohio, indicates a very satisfactory accomplishment, and one that compares favourably with results obtained on other roads similarly situated.

The reduced cost of conducting transportation has been brought about by the increase in freight-train load which has been accomplished during the last five years (made possible by the heavier locomotives purchased) by the additional facilities which have also been furnished during that period, and by the very earnest and efficient efforts of the operating officers to obtain the desired result.

The remarkable chart we present herewith shows the variation in freight-train load and earnings per freight-train mile than has taken place during the last five years. It will be noted that the average train load for the year to June last was 694 tons of revenue and company freight, compared with 466 tons for the year ended June 30, 1910. In the month of July 1915 the average train load was 773 tons for the system, and it is possible that during the present fiscal year the train load will be raised still further, or above 700 tons.

The freight-train earnings for the year just ended at $3.77 per train mile compared with $2.55 for the year ended June 30, 1910. In this connection it should be remembered that the average rate per revenue-ton mile received by the Baltimore and Ohio Company during the year just ended was but 5.64 mills, the lowest rate received by any of the roads in the eastern section and north of the Potomac River.

During the last six years, or from July 1, 1909, to June 30, 1915, over $55,000,000 have been spent for additions and betterments, including the construction of the Sandy Valley and Elkhorn Railway, and over $54,000,000 have been spent for new equipment, a total of $110,000,000. The net book value of equipment, after making adjustments for depreciation, &c., increased $47,000,000, which with the expenditures on road of $55,000,000, makes a total increase in capital cost of road and equipment of about $101,000,000. In addition, the Company has made advances to the Cincinnati, Hamilton and Dayton Railway (on account of which no direct return was received during the year) of about $22,000,000—so that the total capital obligations of the Company have increased about $124,000,000 since July 1, 1909, and this has had the effect of increasing the Company's fixed charges $5,648,708 per annum above what they were at the beginning of the period mentioned.



During the same period, and in addition to the increase in fixed charges just referred to, wages have been increased as a result of arbitration, mediation and agreement, so that if the service performed in 1915 had been on the same basis of pay obtaining in 1909, labour charges would have been $4,500,000 less than they actually were. Since June 30, 1909, taxes have also increased $1,230,000 a year, and operating expenses have been further augmented $435,000 per annum as a result of various legislative requirements, such as Full Crew Law, Hours of Service Law, Boiler Inspection Law, &c. The effect of all this has been to increase the total charges and fixed expenses ahead of dividends by approximately $12,000,000 per annum.

The expenditures that have been made during the last five years for new equipment and additional facilities were necessary in order to put the Company in position to fairly meet its obligations as a common carrier. The existing plant of the Company, taken as a whole, is believed to be capable of earning $10,000,000 a month except during severe winter weather, which would be at the rate of $110,000,000 to $115,000,000 per year, and this is at least $20,000,000 more than could have been earned with the facilities as they were before the large expenditures above referred to were made, and although the Company has a capacity at the present time to earn $110,000,000 per annum, its earnings for the year just ended were only about 80% of that amount, or less than $92,000,000. The earning capacity of the property to-day is not considered to be at all in excess of the requirements of a normal business through the territory served, and additional facilities will be required as the business grows.

On January 1, 1910, only 39.6% of the freight equipment owned at that time by the Company was of

THE BALTIMORE AND OHIO SYSTEM.

Comparison in Percentage since 1910 in Freight-train Miles, Earnings per Freight-train Mile, Total Tons One Mile, and Total Train Load.

all-steel construction, or of wood construction with steel underframes. At the present time over 86% of the Company's freight equipment is either all-steel or is equipped with steel underframes, and when the programme which has been mapped out for the present fiscal year shall have been completed, over 91% of the freight equipment will be either all-steel or equipped with steel underframes or centre sills and suitable for service in heavy trains and with the heaviest locomotives. In order to accomplish that result 16,766 freight cars have been substantially rebuilt and equipped with steel underframes or new steel bodies, either at the Company's shops or by outside concerns, at a cost of $6,664,000, a large part of which was charged to operation. Over 21,000 freight cars of light capacity and weak construction have been condemned and put out of service since July 1, 1909, making a charge against operating expenses of over $2,500,000, exclusive of depreciation. During the same period over 31,000 new freight cars—all but 500 being of all-steel or steel underframe construction—were purchased at a cost of approximately $31,000,000. The freight equipment of the Baltimore and Ohio Company to-day compares favourably with that of any other company; in fact, it is probably somewhat above the average in its adaptability to present service requirements. The total number of revenue freight cars owned June 30, 1915, was something over 87,000, with a total carrying capacity of 3,700,445 tons, an average of 42 tons per car, or an increase in total capacity of 754,408 tons—over 25%—as compared with June 30, 1909.

Since July 1, 1909, 305 cars for passenger service, of all steel construction, have been purchased at a cost of approximately $3,500,000, and 20 coaches have had steel centre sills and steel ends applied at a cost of $91,600. Twenty-three per cent. of the total passenger equipment of the Baltimore and Ohio Company at the present time is either all-steel or is equipped with steel centre sills and non-telescoping ends. These cars are run in the heavy trains in through service, and 43% of the total passenger-car mileage of the Baltimore and Ohio Company is now made with such improved equipment.

During the period under consideration, 691 new locomotives were purchased, at a cost of $15,854,000, having an average tractive power of 50,656 pounds per locomotive. During the same period 203 locomotives of an average age of 25.8 years, and with

an average tractive power of 18,000 lb. per locomotive, were dismantled, and about $122,000 was charged to operating expenses on that account, exclusive of depreciation. Two hundred and thirty-eight other locomotives have been substantially rebuilt and strengthened at a cost of $618,637, in order to better fit them for service requirements.

During the last five years, 159 bridges, having a total length of 25,018 feet, were reconstructed and strengthened to carry heavier power, and 97 wooden bridges, having a total length of 3,631 feet, were replaced with permanent structures.

The average weight of rail in all main tracks has been increased during the period mentioned from 83.3 lb. per yard to 86.2 lb. per yard.

Two hundred and ninety-five miles of main line have been equipped with electric automatic signals during the last five years, at a cost of approximately $700,000. Total miles of line so protected on July 1, 1915, were 503, being 42% of the distance between Philadelphia and Chicago, *via* Pittsburgh, and 26% of the distance from Philadelphia to St. Louis, *via* Grafton and Parkersburg. Twenty-two new passenger stations, costing $460,000, have been built, and 22 other passenger stations have been remodelled at a cost of $574,228. Eighteen new freight stations have been constructed and three remodelled at a total cost of $1,014,000.

During the same period new track has been constructed as follows:—

	Miles.
First track	58.27
Second track	105.65
Third track	58.00
Fourth track	8.50
Total main track as above	230.42
Side track laid	440.58
Total all track	671.00

Ninety-four miles of narrow-gauge main line have been relaid to standard gauge at a cost of $290,823. Six hundred and thirty-three switches and cross-overs have been removed from the main tracks, eliminating that number of potential danger points from main line; $416,000 has been spent for new shop tools and machinery, and the estimated monthly output of locomotives receiving classified repairs of all the shops at the present time is 215, compared with 190 in 1909.

It may also be remarked in this connection that in the great floods in the Central West in the spring of 1913, 179 miles of the main track of this Company were washed out and made unfit for service; 11 bridges, 3,800 feet long, were washed away, and seven bridges, 1,164 feet long, were so damaged as to be made impassable. The direct expenses of the flood charged against operation and allocated from other charges were $2,744,000. The loss of gross earnings was estimated at over $1,500,000. It is conservative to say that the loss which the Company sustained because of the floods was in excess of $5,000,000, not including the damage done to the Cincinnati, Hamilton and Dayton.

The standard of service which is being maintained to-day is as high as has ever been maintained at any period in the past, and probably, in some respects, higher. This has been made possible by the liberal expenditures authorised during the last two years.

CORDOBA CENTRAL RAILWAY.

PROPOSED NEW ISSUE OF STOCK.

AN extraordinary general meeting of the Cordoba Central Railway Company is called for Wednesday next (December 22) for the purpose of obtaining the sanction of the stockholders to the creation of £650,000 6% Debenture stock, ranking in priority to the 4½% Second Debenture stock of the Company. It may be recalled that in December last the directors were authorised to create and issue £500,000 6% Three-year Notes, the proceeds of which were required to meet current liabilities. Only £248,600 of these notes have so far been issued, and as under present circumstances a further issue of notes is impracticable, the directors have decided to raise the funds necessary to provide for outstanding liabilities as they fall due by the issue of £650,000 6% Debenture stock. The new stock will be repayable in seven years at par, the Company having the option to redeem it at any previous time on six months' notice. The necessary sanction to the issue has been obtained from the Treasury, subject to the condition that the £248,600 Three-year Notes already issued shall be immediately cancelled. The new stock is to be applied as follows:—

	£
[illegible]	[illegible]
[illegible]	25,000
[illegible] Notes	248,600
[illegible]	1[illegible],400
[illegible]	650,000

The balance of the Three-year Notes—namely, £251,400 authorised, but not yet issued—is to be cancelled.

Last year the capital expenditures amounted to £357,000, of which £129,000 was on the permanent way, &c., and £217,000 on new rolling-stock and improvements. At June 30 there was a credit balance on capital account of £341,000, the whole of which has apparently since been spent. The amount would have been much larger but for the War, expenditure in this connection having been restricted since the outbreak of hostilities to the completion of works which it was not advisable to suspend, to minor works of pressing necessity, and to works required by the Argentine Government.

The Company suffered last year from the effects of the War, and the earnings and profits of the line, already seriously prejudiced by the general trade depression in Argentina, were further considerably depleted by the exceptionally heavy rains which continued during the greater part of the year. The gross earnings were reduced from £1,969,000 to £1,691,000, and, notwithstanding a considerable saving in working expenses, the net earnings declined from £621,000 to £489,000. Indeed, the total net income, including the balance brought forward, amounted to only £492,194, and inasmuch as it required a sum of £552,937 to provide the Company's interest obligations, including 6% on the Three-year Notes, there was a debit balance to be made good of £60,743, which amount has been paid out of the general funds of the Company. The position of the undertaking as at June 30 last will be seen from the income statement appended:—

Cordoba Central Railway.

	Year—1914-15	1913-14	Six Months to June 30, 1913	1912-13
	£	£	£	£

[illegible] ...	[illegible]	[illegible]	[illegible]	[illegible]
[illegible] ...	1,674	—	[illegible]	[illegible]
[illegible] ...	[illegible]	1,674	—	—

The creation and issue of £650,000 6% Debenture stock and the immediate redemption of the Three-year Notes will mean an increase in interest charges on balance of only £24,000, and having regard to the more favourable outlook the Company should have no difficulty in providing this increased sum. It is true

that the earnings of the line show a further considerable diminution so far in the current year, due to the failure of the sugar crop in Tucuman consequent upon unprecedented frosts. But the prospects for the coming cereal harvests—the movement of which should shortly commence—are, the directors state, excellent, and should enable the Company to quickly regain the loss of earnings shown to date. The variety of produce transported over the system and the importance of good crops to the Company's prosperity will be seen from the appended summary of the freight traffic for the last two years:—

Freight Traffic, Cordoba Central Railway.

Moreover, owing to the improvements in traffic facilities which have been introduced of late, and the additional locomotives and rolling-stock which have been provided, the railway is undoubtedly in a position to earn considerably larger receipts at a lower cost of working than was formerly practicable. The increase as from October 1 of 10% in freight rates should also greatly assist the Company in the current year, as all revenue derived therefrom in the coming months will be so much additional net profit.

On the whole, therefore, the immediate future of the Company is not unsatisfactory, and as soon as a change for the better sets in the recovery should be rapid. As to the more distant future, it has to be borne in mind that the Company is still in its infancy as a trunk-line system in direct communication with the City of Buenos Ayres, and, given fair average crops and more normal conditions generally, marked progress should be made. For many years prior to the recent amalgamation the Company worked under great difficulties. It suffered from keen competition, and was at a disadvantage with its competitors owing to the obsolete condition of a large portion of its equipment and the costly nature of its working operations. All this has been changed in the last few years. The line has been extended to Buenos Ayres, and a large amount of money has been spent in reorganising and improving the system. Since 1909 the total amount of cash applied to betterment and additions has been no less than £3,500,000, and whilst the growth in earnings and in profits prior to the outbreak of war was certainly substantial, the full benefit of these large expenditures has yet to be experienced. To show the development of the system in recent years notwithstanding the many disadvantages under which the Company laboured we append herewith a comparison of the main results of working since 1902-03:—

Cordoba Central Railway.

Year to June 30	Miles Open	Gross Earnings	Expenses	Ratio	Net Earnings
		£	£	%	£
1915	1,186	1,692,000	1,202,000	71·08	489,000
1914	1,184	1,969,000	1,348,000	68.46	621,000
1913	1,175	1,910,000	1,364,000	71.40	546,000
1912	1,172	1,644,000	1,199,000	72.95	445,000
1911	1,170	1,530,000	1,000,000	65.36	530,000
1910	1,149	1,320,000	912,000	69.05	408,000
1909	952	1,030,000	685,000	66.33	425,000
1908	952	1,014,000	625,000	61.33	389,000
1907	952	939,000	579,000	61.66	360,000
1906	952	930,000	566,000	60·86	364,000
1905	952	834,000	498,000	59·71	336,000
1904	952	778,000	449,000	57.71	329,000
1903	952	635,000	404,000	63·62	231,000

It will be seen that whilst the gross earnings last year declined £277,000, or 14.1%, the working expenses were reduced by £145,000, or 10.8%, due in large measure to a saving of 16.5% in train mileage. The substantial decrease of £17,000, or 13%, in maintenance of way, works, &c., would undoubtedly have been greater but for the continuous heavy rains experienced during the year. The saving of nearly £80,000, or 9.5%, in transportation expenses is distinctly satisfactory as showing the ability of the Company to effect economies in times of stress and difficulty. To show the savings last year in the various spending departments we give the following:—

Working Expenses, Cordoba Central Railway.

	1914-15 £	1913-14 £	—Difference— £	%
Maint. of way works	118,010	135,030	—17,020	— 13

Total expenses	1,202,463	1,347,998	—145,535	—11

The set-back caused by the War is, of course, unfortunate, as it means delay in reaping the reward of the recent betterment policy, but now that the tide is turning and the prospects for Argentina are so much more hopeful the prosperity of the undertaking should quickly recover, and not only are interest charges likely to be fully covered in future, but a resumption of dividends upon the share capital may not be long delayed. The fall in the prices of the Company's securities has been heavy, but in several instances there has been some recovery from the lowest point touched. It should be noted that the issue of new stock and the redemption of notes will enable the directors to pay the six months' interest due January 1 on the 4½% Second Debenture stock, the price of which is only 52½. Further, it may be pointed out that interest on the 5% First Preference stock is cumulative, and that the arrears now amount to £72,000. These will have to be paid off sooner or later, and this largely accounts for the stock now standing at the relatively high price of 53.

The capital of the Company and the approximate prices of the various securities at the present time are set out beneath:—

Cordoba Central Railway Company.

Security	Amount	Interest	Price	Yield

(*b*) Does not rank for interest until July 1, 1917.

RUBBER TOPICS.

The price of rubber has been well maintained this week in the region of 3*s.* 6*d.* per lb. for plantation "spot." Discriminate investment buying continues in the Share market, shares of companies with attractive outlooks, irrespective of the rise in the commodity, being in demand. The tabular analysis of over 140 rubber companies which appeared in our issue of December 4 enables proper selections and comparisons of share values to be made.

The first sign that the rise in the value of rubber is benefiting producers is given by the statement issued this week that the Allagar Rubber Estates has contracted to sell 4,480 lb. per month from January to June 1916 at 3*s.* 4½*d.* per lb., and 13,440 lb. per month from July to December 1916 at 3*s.* per lb. That is to say, the Company has sold forward

107,420 lb. of its 1916 crop at an average price of about 3*s.* 1*d.* per lb. The Allagar's crop for the eleven months of this year has been 240,500 lb. Last year's crop was 226,774 lb., realising a gross price of 2*s.* 1¾*d.* per lb.

RUBBER REPORTS ANALYSED.

KUALA-KLANG ESTATE.

Issued Capital: £25,000 in £1 Shares.

—Results of Year to September 30, 1915—

Total Planted Acres	Area in Bearing Acres	Rubber Output lb.	Av. Yield Per Bear'g Acre lb.	Per Planted Acre lb.	Price Realised per lb.	"All-in" Cost per lb.	Net Profit £	Dividend Amt. £	Dividend %
515	515	167,182	324	324	2 5.08	11.57	11,773	8,750	30

Price of Shares, 52/6 c.d. Market Capitalisation per planted acre, £117.

This is another Malayan estate to be added to the growing list of companies producing rubber at less than 1*s.* per lb. "all-in" cost. It will be seen above that for the past year from 515 acres of planted area—now all in bearing—an output of 167,182 lb. was obtained, equal to the satisfactory yield of 324 lb. per acre, the "all-in" cost being only 11.57*d.* per lb. The net profit for the year of £11,773 represents £47% on the capital of £25,000, but the total dividend recommended is 30%, requiring £8,750, and £3,000 is carried to reserve. Allowing for the payment of the final dividend the balance sheet shows £6,690 of surplus liquid assets—a relatively strong position. At the present price of the £1 shares of, say, 48*s.* 6*d.* xd, the market capitalisation per planted acre is £117. The estimated output for the current financial year is 175,000 lb., equal to about 340 lb. per acre. On the basis of the past year's conservative distribution of 30%, the shares at present price return the purchaser as much as 12½%, and in view of the increased yield expected for the current year, and the reduction of the "all-in" cost below 1*s.* per lb., they are a satisfactory investment, though at present there is not a very free market in them.

GLEN BERVIE (SUMATRA).

Issued Capital: £50,000.

—Results for Year to September 30, 1915—

Total Planted Acres	Rubber Output lb.	Av. Yield per Planted Acre lb.	Price Realised per lb.	"All-in" Cost	Net Profit £	Dividend £	Dividend %
1,457	203,750	140	2 5.4	1,2¼	10,752	6,250	12½

Price of Shares, 1⅜ c.d. Market Capitalisation per planted acre, £56.

The report does not state the acreage in bearing in the past year, but at September 30 apparently about 830 acres were being tapped, representing 82,606 trees out of a total of 149,201 planted. The yield of 140 lb. per planted acre is therefore not very good. But a comparatively high price was obtained for the output, and the "all-in" cost worked out from the figures in the accounts has been reduced to 1*s.* 2½*d.* per lb.—a good performance in view of the yield. The net profit of £10,250 represents 20% on the issued capital, and the dividend declared of 12½% absorbs only £6,250, £3,000 being placed to reserve, and £1,500 extra carried forward. The balance sheet shows a strong position with £11,850 of surplus liquid resources in hand. A market capitalisation of £56 per planted acre indicates that the shares are cheap at their quotation of about 1¾ *cum* dividend, notwithstanding the rather poor yield per acre.

NARBOROUGH (F.M.S.) RUBBER ESTATE.

Issued Capital: £59,995 in 2/- Shares.

(7% Debentures: £10,000.)

—Results of Year to June 30, 1915—

Total Planted Acres	Area in Bearing Acres	Rubber Output lb.	Av. Yield Per Bearing Acre lb.	Per Planted Acre lb.	Price Realised per lb.	"All-in" Cost per lb.	Net Profit £
814	300	115,906	386	142	2 1½	1 3.3	4,912

Price of Shares, 1/9. Market Capitalisation per planted acre, £77.

The yield of 386 lb. per bearing acre is very satisfactory and points to a good production when the whole estate is in bearing, as it should be by the end of 1916. No dividend was paid for the past year, the profits being used to strengthen the financial position, so that at June 30 the surplus liquid assets amounted to £5,187. On account of the current financial year an interim dividend of 2½% is declared. The output for the first five months has been 62,140 lb., so that the 170,000 lb. estimated for the year should be reached. A profit for the current year sufficient to pay a dividend of 10% is, therefore, not unlikely. At price 1*s.* 9*d.* the 2*s.* shares, having regard to the high yield obtained per acre, are decidedly not overvalued.

KRUBONG (MALACCA).

Capital: £24,458 in £1 Shares,

(£842 Debentures.)

— Results for Year to September 30, 1915 —

Total Planted Acres	Area in Bearing Acres	Rubber Output lb.	Av. Yield Per Bearing Acre lb.	Per Planted Acre lb.	Price Realised per lb.	"All-in" Cost per lb.	Net Profit £	Dividend Amt. £	Dividend %
501½	236½	99,096	419	197	2 1	1 4½	3,074	2,649	12½

Price of Shares, 32/0 c.d. Market Capitalisation per planted acre, £73.

The rubber yield of 419 lb. per acre in bearing obtained in the past year is a decidedly good one, and if an average of, say, 400 lb. per acre is shown when the whole of the planted estate is at full maturity, the yearly output should be more than twice as much as the production of 99,096 lb. for the past year. The market capitalisation of £73 per planted acre is low, having regard to the fact that, though the estate is only at half maturity, the dividend paid for the past year gives a yield of about 8% on the market price of 32*s.* *cum* dividend for the £1 shares. As the output increases the somewhat high cost of production should be reduced. The balance sheet shows £3,444 of surplus liquid assets.

BANTAM (JAVA).

Capital: £150,000 in £1 Shares,

—Results for Year to June 30, 1915—

Total Planted Acres	Area in Bearing Acres	Rubber Output lb.	Av. Yield Per Bear'g Acre lb.	Per Planted Acre lb.	Price Realised per lb.	"All-in" Cost per lb.	Net Profit £	Dividend Amt. £	Dividend %
2,272½	1,816½	441,757	243	194	2 3.17	1,5.32	25,930	18,750	12½

Price of Shares, 24 6 c.d. Market Capitalisation per planted acre, £73.

The yield per acre, while very low compared with estates in Malaya or Sumatra, is about up to the average for Java. The "all-in" cost is, of course, influenced by the yield. The net profit of £25,930 for the past year in the circumstances is a satisfactory one, being equal to over 16% on the capital. The dividend of 12½% is consequently a conservative distribution, and allowing for its payment the balance sheet shows surplus liquid assets of £19,240. At 24*s.* 6*d.* the £1 shares give a return of about 10% on the past year's distribution, and the market capitalisation per planted acre of £73 is a reasonable one, having regard to the fact that all the area was not producing last year. It will be, however, by the end of 1916. The estimated crop for the year to June 30, 1916, is 495,000 lb., equal to 220 lb. per planted acre. It is to be borne in mind that the advent of a very low price for rubber would place the Company in an unfavourable position in comparison with better-yielding estates.

ASAHAN (SUMATRA).

Issued Capital: £109,096 in 10/- Shares 9/6 paid.

—Results for Year to July 31, 1915—

Total Planted Acres	Area in Bearing Acres	Rubber Output lb.	Av. Yield Per Bearing Acre lb.	Per Planted Acre lb.	Price Realised per lb.	"All-in" Cost per lb.	Net Profit £	Dividend Amt. £	Dividend %
2,464½	7.5½	157,584	195	56	2 2.41	1 4.15	6,435	2,750	2½

Price of Shares, 12/-. Market Capitalisation per planted acre, £56.

The yield of 195 lb. per bearing acre is poor, but the market capitalisation of only £56 allows for this.

A 5% dividend could have been paid for the past year, and the limiting of the distribution to 2½% strengthens the financial position, the surplus liquid assets now amounting to £3,657. The estimated crop for the current year is 180,000 lb. As 893½ acres were planted in 1911 and 743 in 1912-13, further large increases of output should be witnessed next year and the year after. The estate has suffered from drought in the recent past, and the possibility of a repetition of this unfavourable influence in the future must not be overlooked.

GAN KEE (F.M.S.).

Issued Capital: £36,785 in 2/- Shares.
(£33,000 Ordinary and £3,785 Part. Preference Shares.)

Total Planted Acres	Rubber Output lb.	Av. Yield Per Planted Acre lb.	Price Realised Per lb.	"All-in" Cost Per lb.	Net Profit £	Dividend Amt. £	%
593	95,650	135	2 1½*	1,1†	3,866	2,524	7

Results for Year to June 30, 1915.

* Net. † Excluding selling charges.

Price of Shares, 2/3. Market Capitalisation per planted acre, £70.

The yield per acre is poor. Balance-sheet figures suggest that it would have been better not to pay a dividend for the past year.

KILLINGHALL (F.M.S.).

Issued Capital: £28,000 in £23,000 Ordinary £1 Shares and 10,000 £1 Part. Preference Shares, 10/- paid.

Total Planted Acres	Rubber Output lb.	Av. Yield Per Planted Acre lb.	Price Realised Per lb.	"All In" Cost Per lb.	Net Profit £	Dividend Amt. £	%
1,025	135,677	132	2 1½*	1 2 1†	6,296	1,913	7

Results for Year to June 30, 1915.

* Net price. † Excluding selling charges.

Price of Ordinary Shares, 37/6. Market Capitalisation per planted acre, £50.

The yield per acre is distinctly below the average. Of the 1,025 acres, 692 were planted prior to the end of 1910, and over 500 acres prior to the end of 1909. The output for the first five months of the current financial year shows a large increase, 92,847 lb. having been produced, against 48,766 lb. in the same period of 1914. The financial position is weak. The balance sheet shows current liabilities, including dividend, to be £9,608 in excess of liquid assets. There is a loan from Government of £7,916. Callable Preference capital, £5,000.

NATIONAL EXPLOSIVES COMPANY.

TWELVE months ago this well-known Company engaged in the manufacture of explosives was able, for the first time for many years, to distribute a dividend on its Ordinary share capital. The business is one subject to considerable fluctuations, and those engaged in the industry apparently find it difficult to carry it on successfully owing to the very keen competition. The National Explosives Company has suffered severely from this cause in the past, and in 1907 a scheme of capital reorganisation was carried through; but, as already stated, it was not until last year that the position of the Company was such as to justify the payment of a dividend on the Ordinary capital. The Company's financial year ends on October 31, and though twelve months ago a considerable improvement was shown in position, the directors pointed out that the operations during the period covered by the accounts had not materially benefited from the increased contracts arising out of the War. It was announced, however, that since the commencement of the War the factory had been fully engaged on Government orders, and that the contracts entered into would keep the works employed for a considerable time, while at the same time arrangements had been made for a supply of raw materials covering these contracts, and the hope was expressed that the twelve months to October 31, 1915, should show satisfactory results. This hope has materialised in spite of the fact that the year is described as being one of exceptional anxiety, "the operations of the Company having been carried out under considerable difficulties owing to the abnormal conditions ruling."

The Company is able, however, to report an increase in its profits from £27,070 to £86,804. In accordance with the terms of the Trust Deed the board has taken advantage of the satisfactory result to increase the amount set aside for Debenture redemption and appropriated £23,656 for this purpose, as against £5,463 twelve months ago. After making provision for this and for Debenture interest there is a net profit of £49,812, as compared with £12,223, a sum sufficiently large to provide for a dividend of 40%. The actual distribution, however, is restricted to 20%, and of the balance £9,500 is set aside for reserve, &c., and the balance of £15,348 is added to the carry-forward. Herewith we give a profit statement for the past five years:—

	1915	1914	1913	1912	1911
	£	£	£	£	£
Trading profit	86,804	27,070	21,278	[illegible]	[illegible]

Carried forward	16,213	865	-	Dr. 8,563	Dr. 11,493

* Including [illegible] in connection with Debenture issue.

The issued share capital amounts to £124,820 in £1 shares. There is an authorised 6% Debenture stock of £80,000, of which £44,030 has been issued, but up to the present £13,770 has been redeemed and cancelled. A further amount of £15,896 is available for this purpose, and when this amount has been expended during the ensuing year the total Debenture stock outstanding will be reduced to £14,344. There is a general reserve account of £10,000, and a reserve account for renewals and depreciation of plant of £6,000. Herewith we set out a summary of the liabilities and assets as at October 31 last:—

LIABILITIES.		ASSETS.	£
Issued share capital ...	124,820	Property, buildings, &c....	125,597
Debenture stock ...	30,452	Shares in other Cos., &c. ...	99,178
Reserves	45,667	Sundry debtors, &c. ...	30,102
Sundry creditors	60,303	Treasury bills, &c.	5,145
Profit and loss	28,695	Cash	29,915
	289,937		289,937

During the past year the capacity of the factory has been materially increased to meet Government requirements, and the expenditure incurred therein will fall to be dealt with in next year's accounts. Needless to say, the increased accommodation afforded should also be reflected on the credit side of the profit and loss accounts, and in view of the work in which the Company is engaged there is no doubt that it will continue to be very busily employed for a considerable time to come, and the profits should continue on a large scale, so that the results should be satisfactory to the shareholders even after deduction of the sums that will have to be paid under the Excess Profits Act. We drew attention to the satisfactory outlook for the Company in October 1914, when the £1 share could be obtained at about 6*s.* 6*d.* The present quotation is 19*s.*, and, consequently, on the basis of last year's distribution, the yield is exceptionally large.

MERCHISTON.—Rubber harvested for eight months to November 30, 25,934 lb., of which 13,969 lb. sold to date at a gross average of 2*s.* 7·21*d.* per lb.

Insurance Notes.

LIFE ASSOCIATION OF SCOTLAND.

A QUINQUENNIAL valuation is due in this life assurance Company on April 5 next, so that the annual report for the financial year ended April 5, 1915, deals with the fourth year of the present quinquennial period. As eight months of that year were war months, a falling-off in the amount of the new business was only to be expected. During the financial year new life policies for £505,108 were completed, of which £17,700 was reassured, the net retention at the Association's sole risk thus being £487,408. This compares with a net retention of £649,388 in 1913-1914, but the amount is little below the average of recent years. All this new business was effected within the United Kingdom. The total net life premium income of the year, £355,246, shows a reduction of only £1,728. The additional sum of £15,772 was received as consideration for new annuities granted, this being evidently a section of the business which the Association is not very much inclined to push. Expenses, inclusive of commission, seem to have absorbed about 15.5% of the premiums, after making a suitable adjustment for the small cost necessitated by the annuity section, and the expense ratio is reported to have been the lowest for several years past. It may be said, however, that a reduction was to be looked for under the circumstances, for the outlay on new business must have been considerably less than in the previous year. Claims by death, including bonuses, amounting to £371,837, included payments of £27,335 which were directly due to the War. Yet their amount, excluding bonuses, was less by £30,880 than provided for under the mortality tables, and that in such a year the incidence of mortality should have continued to be generally favourable is a very satisfactory feature. Endowment assurances for £50,949 matured by survivance. Through the year's operations the funds of the Association were increased by £33,963 to £6,127,362. The life and annuity funds in themselves amounted on April 5, 1915, to £5,928,675. The capital redemption account shows a premium income of £1,161 and a fund of £7,325. The net rate of interest realised on the life funds, after deduction of income tax, is reported as £3 18*s.* 9*d.* per cent. This shows a reduction of 2*s.* per cent. as compared with the net yield in 1913-14, but this is more than accounted for by the heavier tax imposed.

Under the Association's Class A series of policies profits are annually applied to reductions of premiums, and the bonuses in this class were maintained at the same rates as were allocated in the previous year. The other classes of policies are dependent on the results of the approaching quinquennial valuation. It is evident that the Association is making fair profits from the usual sources, but the valuation of the investments will take place under unusual circumstances. At the annual meeting the Chairman stated that while there were really no means at that date of forming a reliable estimate of what the depreciation in the Association's securities was likely to be, it might be taken, looking to the strong reserves, that such shrinkage, even if very substantial, would in no way affect the stability of the Office.

The dividend on the paid-up capital, which amounts to £87,500, in 10,000 shares, is declared, as for each former year of the current quinquennium, at the rate of £1 3*s.* 6*d.* per share.

CLERGY MUTUAL ASSURANCE SOCIETY.

In our review of the annual report of this life Office for the financial year ending May 31, 1914, it was pointed out that subsequently to that date further powers had been obtained by the Society under a special Act of Parliament, including an enlargement of the qualification of membership. The new rules in this respect entitle not only the clergy of the Church of England and allied Churches, and their relatives by blood or marriage, to effect assurances of every description in the Society (there is no limitation as regards non-participating policies, which may be effected by any person), but they extend such eligibility to "persons who have been members of or on the staff of any university, public school, college, or kindred institution in the United Kingdom which the directors may from time to time approve for that purpose."

It is announced in the annual report for the financial year ended May 31, 1915, that the Society had already received a considerable amount of new business which but for this Act it could not have taken. To some extent this has been a set-off against the check to new business occasioned by the War, and the total amount of the new policies issued, £253,303, is only less by £15,948 than was reported for the previous year. This must be considered a good record under the circumstances, particularly when it is remembered

that the Society employs no agents and pays no commission for the introduction of business or for its maintenance.

The sum assured by policies existing at the close of the financial year, with bonus additions, was £9,720,946, which is less by £191,982 than was shown in the previous annual report. On the other hand, the net premium income was increased by £3,278 to £277,409. The expense ratio per £100 of premiums was £6 16*s.* 8*d.*, as compared with £7 3*s.* 9*d.* in 1913-14, although last year's expenses included the whole of the cost of the Society's Act of Parliament. This ratio is only about half the average in British life offices, and bears a similar proportion to the margin of premiums which was reserved at the last valuation as a provision for costs and contingencies.

Although the claims by death in the last financial year, amounting to £306,502, included claims for £27,463 in respect of policies on members who were killed in action, the incidence of mortality remained favourable, in accordance with the continuous past experience of the Society, which has always derived benefit in this respect from the select character of its business. The total death claims paid during the Society's history up to May 31 amount to £9,614,771. Endowment assurances matured by survivance during the last financial year to the extent of £19,015. The sum of £18,187 was received as consideration for new annuities, and annuities of £26,713 were paid. Surrenders involved an outlay of £29,099, and bonuses allocated in cash or by way of reductions aggregated £42,531.

Through the year's operations the life assurance fund, after transfer of £8,000 to the staff superannuation fund, was increased by £16,417 to £4,818,126. The average rate of interest, subject to deduction of income tax, is reported as £4 3*s.* 3*d.* per cent. This is practically the same rate as was disclosed in last year's report, but owing to increase in the tax the net interest yield must have been somewhat diminished. However, the profit accruing from interest must have been large, seeing that the rate of interest assumed for the accumulation of the funds at the last quinquennial valuation was only 2½%.

A quinquennial valuation falls due at the close of the present financial year. The Society has in the past proved itself one of the most successful producers of profit amongst British life offices, and its bonus-earning capacity under normal circumstances remains exceptionally strong. During the four years of the current quinquennium which were completed up to the date covered by the last report the profits from all the ordinary sources upon which a life office relies for bonus have been large and continuous, the expenses of management having been low, the incidence of mortality favourable, and the interest earnings much in excess of those assumed. But the financial outlook is generally uncertain, and in regard to the forthcoming valuation the directors express themselves in the annual report as follows: "The year just closed is the fourth of the present quinquennium, and since the profit from ordinary sources has been well maintained for four years, it would have been reasonable under more auspicious circumstances for the members to look forward to a distribution of bonus next year at the exceptionally high rates which the Society has hitherto been able to declare. But the general upheaval has greatly disturbed Money markets all over the world, and the issue of the new War Loan at 4½% interest also tends to lower the price of other first-class investments. The inevitable depreciation in the value of securities will call for consideration on the occasion of the valuation of the assets and liabilities due to be made on May 31, 1916. The directors think that it would be unwise to offer to the members any forecast regarding the results of the valuation, and impossible to say how the question of a surplus of profit available for distribution among the members may be affected."

AMERICAN OFFICES.

EQUITABLE LIFE ASSURANCE SOCIETY OF U.S.

Head Office: New York; London Office: 346 Strand, W.C. Established 1859.

This Company is practically a mutual institution, as the share capital only amounts to £20,550, and the dividends thereon are limited to 7 per cent., all other profits being apportionable amongst the participating policyholders.

The annual statement for 1914 shows a net new life business of £27,385,669 and a total net premium income of £10,888,044 (apart from £257,169 received as consideration for new annuities), of which expenses, inclusive of commission and taxes, absorbed about 19·5 per cent. Interest, dividends and rents produced £4,877,308. Claims were paid to the extent of £6,203,926, of which £4,206,547 represented death claims, and the bonus paid in cash to policyholders amounted to £1,884,380, apart from £616,028 by way of reduction of premiums. The life funds were increased by £1,970,711, and amounted at close of year to £108,376,796. The interest yield seems to have been about £4 12*s.* 11*d.* per cent.

The valuation at December 31, 1914, was made by the American Experience and other mortality tables for assurances, in combination with net premiums and interest at the rates of 3, 3½, and 4 per cent. respectively for different sections of the business. The surplus on this basis then amounted to £17,710,435, of which £14,323,436 stands to the credit of deferred dividend policies. The actual amount of profits paid during the year was £2,796,272.

MUTUAL LIFE INSURANCE COMPANY OF NEW YORK.

Head Office: New York; London Office: 7 and 8 Norfolk Street, W.C. Established 1843.

In 1914 the new life assurances amounted to £29,485,086. The total net life premiums were £11,181,434. Expenses of management, inclusive of commission and taxes, seem to have absorbed about 19·5 per cent. of the premiums. Claims, annuities, surrenders and bonuses to participating policyholders aggregated £14,530,052. The interest yield on the life funds, which amounted on December 31, 1914, to £123,451,474, seems to have been about £4 15*s.* 3*d.* per cent.

The valuation is made for most assurances by the American Experience Tables, the rates of interest assumed being 3½ per cent. on policies issued before 1907, and 3 per cent. on later policies. The amount of bonuses to be distributed during the current year is £3,478,220.

NEW YORK LIFE INSURANCE COMPANY.

Head Office: New York; London Office: Trafalgar Buildings, Trafalgar Square, W.C. Established 1845. No share capital.

New assurances in 1914 amounted to £45,940,861. The net life premium income amounted to £18,736,593, of which expenses and commission absorbed about 15·2 per cent.; consideration for annuities, &c., to £118,753; claims by death to £5,624,819; matured endowments to £2,145,647; surrenders to £3,461,255; annuities paid to £313,372; and cash bonuses to policyholders and reductions of premium to £3,569,531. The funds on December 13, 1914, amounted to £159,246,657, and the interest yield appears to have been about £4 14*s.* 9*d.* per cent.

The valuations are made annually. The valuation as at December 31, 1914, was made for assurances, with some exceptions, by the American Actuaries' Mortality Table in combination with 3 per cent. interest. The amount of profits appropriated amongst policyholders after this valuation was £3,514,666.

Assam Dooars Tea Company.—Interim dividend of 5 per cent. on Ordinary, less tax.

Indianapolis Breweries.—Final dividend of 6 per cent. on Ordinary, less tax.

Norwich Union Fire Insurance.—Interim dividend of 12*s.* per share.

PEKIN SYNDICATE.

In the report of the directors issued in December 1914 it was pointed out that steps were being taken to improve on business lines the commercial position of the Honan mines by the adoption of co-operative measures between the Syndicate and the Chinese officials and capitalists which it was hoped would "lead to joint enterprises in other directions being undertaken." In June last a circular was issued pointing out that the negotiations which had extended over a considerable period with the Chinese authorities for closer co-operative measures, with a view of facilitating improved working conditions and extending operations then in progress, had been satisfactorily ended, thanks to the active support and unremitting assistance of the British Minister in Pekin, by the conclusion of an agreement entered into between the Syndicate and the representatives of the Chinese Government nominated by the Civil Governor of Honan. A working agreement has thus been entered into, with the approval of both the British and Chinese Governments, whereby an Anglo-Chinese Corporation has been created which is to be known as the Fu Chung Corporation, and is established on almost the same lines as the British and Chinese Engineering and Mining Company (Kailan Administration), which has been eminently successful.

Under the terms of the agreement the Fu Chung Corporation takes over all the coal produced by the Syndicate and the Chung Yuan Mining Company, a concern embodying all the native mining companies in the locality, and becomes the sole selling agents. In addition, the Fu Chung Corporation has been granted the exclusive coal-mining rights in the Hwai Ching Fu Prefecture, outside the areas now operated by the Syndicate and the Chung Yuan Company, and further, it is given special facilities for the employment of foreign capital in the two Prefectures of Chang te Fu and Wei Hwei Fu, lying west of the Pekin-Hankow Railway, which concessions are granted to the Fu Chung Corporation for a period of 60 years from the date of the agreement.

The Pekin Syndicate and the Chung Yuan Company will each maintain its separate existence, each having its own constitution and its own board of directors. The Syndicate and the Chung Yuan Company will each retain the ownership of its respective properties, and will deal as their shareholders may think fit with the proportion of the profits coming to them from the working of the joint undertaking. Further, the Syndicate and the Chung Yuan Company will carry on their mining operations within the areas over which they retain exclusive working rights independently of each other, and without interference from the Corporation. The Syndicate and the Chung Yuan Company must not take up any new enterprises within the Province of Honan which will in any way compete with the Corporation without first offering the same to the latter.

In consequence of the long drawn out negotiations between the Syndicate and the Chung Yuan Company before completion of this mutual working arrangement both parties passed through a period of keen competition resulting in restricted outputs of coal and reduced selling prices, but the establishment of the Fu Chung Corporation finally eliminated all rivalry between the Syndicate and the neighbouring native mines. As the Corporation was only formed in June last the accounts for the twelve months to June 30 do not reflect the results which are expected to be of benefit to the Syndicate, but it is hoped that the results for the current year will, partially at any rate, reflect the improvement anticipated. The natural result of the keen competition already referred to, plus the outbreak of the European War, resulted in a considerable restriction in the output of coal during the twelve months to June 30 last, but the output has been steadily increasing since the sales have been conducted by the Fu Chung Corporation, so that the production is now nearly equal what it was at the commencement of the War. For the same reasons the sales have also been unsatisfactory, and it was found necessary to restrict activities in this direction pending the completion of the new working arrangement resulting in the establishment of the Fu Chung Corporation. The work of organisation of that Corporation is proceeding satisfactorily, and the sales are now being pushed energetically. The net result is that the profit and loss account shows a credit balance of £47,514, as compared with £47,405 for the previous year. After allowing for various expenses and writing off for depreciation of investments a sum of £27,446, as against £63,389 twelve months ago, the debit balance reported last year of £43,508 has been reduced to £5,673, while the undivided surplus is now £409,078. This large carry-forward is due to the uncertainties as to the relative rights of the various issues of capital, and it has been necessary to retain money in hand to provide for capital purposes.

We show the profits made during the last four years:—

Year ended June 30—	1915	1914	1913	1912
	£	£	£	£

* After allowing for depreciation in value of investments.

The total issued capital is £1,242,822, and the chief asset consists of investments which are valued at £796,560. These are set out in detail in the report.

A summary of the balance sheet as at June 30 last is appended:—

LIABILITIES.	£	ASSETS.	£
Issued Capital:		Cash	57,967
399,000 Ord. shares, 2s. each	39,900	Investments	796,560
2,000 Defd. shares, 1s. each	100	Sundry debtors	28,745
1,202,822 Shansi £1 shares	1,202,822	Stocks	32,849
	1,242,822	Steam collier	42,669
Shansi shares forfeited ...	773	Concession	133,732
Premium on issue of Ord.	106,023	Land, property, &c. ...	682,933
Sundry creditors	16,759		
Profit and loss	409,078		
	1,775,455		1,775,455

The report points out that "the commercial resources of China, coupled with the enterprising disposition of the inhabitants of the country, will afford great opportunities to the Syndicate, because—notwithstanding the present clear evidence of foreign intrigue in China—of the close co-operation now existing between the Syndicate and the Chinese, and at the conclusion of the War great advancement will probably be made on European lines. Indeed, the Syndicate is even now being approached with railway, mining, engineering, and financial schemes of a sound and attractive nature. The Syndicate's policy in regard to these various propositions will be to act in unison with Chinese business communities and European institutions of neutral or allied countries."

So far, of course, the Company's career has been far from successful, but there are grounds for hoping that with the new arrangements the results will be more prosperous. Much, of course, will depend on the development of China, and whether this will proceed upon peaceful lines or be accompanied by political upheavals. It is certainly to be hoped that German intrigue will receive a quietus, and that the country will be allowed to develop its resources without untoward outside interference. Given such conditions the career of the Pekin Syndicate should be of a more prosperous nature during the future, and the shareholders may indeed be rewarded for their many disappointments of the past. The 2*s.* Ordinary share now stands at 4*s.* 6*d.*, and the £1 Shansi share at 17*s.* 6*d.*

POWER-GAS CORPORATION, LIMITED.

At the meeting of the Corporation in December 1914 the Chairman pointed out that the Company was being worked full time, and expressed the hope that the accounts for the twelve months to September 30, 1915, "will not show any serious diminution from the position we are in to-day." Inasmuch as the profits for the year have amounted to £20,743, as compared with £20,511, it will be seen that Sir Alfred Mond was not far wrong in his prognostication. The results are described by the directors as satisfactory. The business has been further developed during the year, and important contracts made for the supply of plant in connection with the manufacture of munitions. It will be evident that the Company has not only recovered from the depression which occurred some few years ago resulting in a reduction in its capital in 1907, but has made sufficient progress for the shareholders to regard the outlook with considerable confidence.

The Power-Gas Corporation, Limited, was formed in July 1901 to acquire the patents of Dr. Ludwig Mond and Mr. Duff for the production of cheap power and heating gas—known generally as "Mond gas"—with the simultaneous recovery of sulphate of ammonia. In addition to the patents, the Corporation acquired the entire issued share capital of Ashmore, Benson, Pease and Company, Limited, constructional engineers, of Stockton-on-Tees. Under the processes covered by the patent rights acquired the Company is able completely to convert cheap qualities of coal, commonly known as slack or dross, into combustible gas, sulphate of ammonia, and ashes, at one operation, by means of special gas-generators and ammonia-recovery plant, and produce from each ton of slack about 15 times the volume of gas and from three to four times the weight of sulphate of ammonia obtainable in the manufacture of illuminating gas. The processes had been worked successfully at the Winnington works of Brunner, Mond and Company and the Fleetwood works of the United Alkali Company, where about 700,000 tons of slack had been dealt with in gas-producers under the control of the patentees; while installations with ammonia-recovery plant have been erected at a considerable number of places. Thus there are two branches to the business—namely, a general engineering trade, carried on at the works acquired from Ashmore, Benson and Company, and a second representing the trading of the Power-Gas Corporation itself. The necessity for reducing the capital in 1907 was due to the depression in the engineering trade, and substantial losses were made by Ashmore, Benson, Pease and Co., Ltd., and after a revaluation of the land, buildings, plant and machinery of this Company it was decided to write these items down to their true value, thereby reducing the value of the Power-Gas Corporation's interest in the engineering concern. This was provided for by writing down the Deferred shares of the Corporation from £1 to 10*s.* each.

Apart from its natural growth, the basis of the business has been broadened since the formation of the Corporation. For example, in conjunction with the Sheepbridge Coal and Iron Co., Ltd., the Power-Gas Corporation formed a subsidiary Company, entitled the Langwith By-Product Co., Ltd., for the purpose of installing a large ammonia-recovery plant at the Langwith Colliery. Subsequently the suction gas-producer business of the Mersey Engine and Producer Co., Ltd., was acquired, and later on there was formed the Ammonia Finance Syndicate, Ltd., controlled by the Corporation, for the purpose of financing power schemes, and also schemes dealing with cheap fuel for the production of gas and sulphate of ammonia, the schemes naturally being worked in connection with the Mond process.

As an indication of the manner in which profits have varied during the past six years we set out the following:—

Year ended Sept. 30—	1915	1914	1913	1912	1911	1910	1909
	£	£	£	£	£	£	£
Profit, &c. ...	—	—	32,786	22,821	24,689	17,582	12,103
Directors' fees ...	—	—	2,780	2,317	2,545	1,891	1,420
Expenses	—	—	13,987	8,652	8,237	7,675	6,903
	20,743	20,511	16,019	11,852	13,907	8,016	3,780
Ordinary dividend	14,977	12,481	12,481	9,985	9,985	9,985	—
	(6%)	(5%)	(5%)	(4%)	(4%)	(4%)	—
	5,766	8,030	3,538	1,867	3,922	—1,969	3,780
Reserve	4,140	4,100	3,120	2,000	2,780	1,600	750
	1,626	3,930	418	—133	1,142	—3,569	3,030
Brought forward...	7,479	3,549	3,131	3,264	2,122	5,691	2,661
Carried forward ...	9,105	7,479	3,549	3,131	3,264	2,122	5,691

The slight improvement in profits reported, coupled probably with the satisfactory outlook, has brought about an increase in the dividend from 5% to 6%. There remains a balance of £5,766, of which £4,140 is carried to the reserve fund, and the surplus added to the carry-forward bringing it up to £9,105.

The issued share capital amounts to £299,940, and there was a reserve at September 30 last of £14,350, which is now brought up to £18,490. We show herewith the liabilities and assets as at September 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital... ...	299,940	Property	167,697
Sundry creditors	21,924	Advances	140,486
Secured loans	26,000	Investments...	37,813
Reserve	14,350	Contracts	43,067
Profit and loss	28,223	Cash	1,374
	390,437		390,437

For the first half of the past financial year the output of the works of Ashmore, Benson, Pease and Company was reduced owing to the suspension of civil contracts, but the works are now very fully employed on the manufacture of war material, and they were declared a controlled establishment as from September 6. It is thus evident that the Company will continue to be busy for some time to come, and the results for the current year should be quite satisfactory to the shareholders even after allowing for the proportion of the extra profits that will have to be returned to the State. The £1 Ordinary share may be obtained at about 12*s.* 6*d.*, at which price on the basis of a 6% dividend a yield of about 10⅜% is forthcoming. The shares, of course, are speculative in character, but in view of the possibilities and of the large yield afforded, they have considerable attractions.

Amount £	Description	Par £	Price £	Div. %	Yield £ *s.* *d.*
249,620	Ordinary shares	1	⅝	6	10 12 5
50,000	Deferred shares	10*s.*	—	—	—

New Issues.

MACFARLANE AND ROBINSON, LIMITED.

This Company is offering for subscription at par an issue of 60,000 7% Cumulative Preference shares of £1 each. The Company was formed in 1909 with the object of amalgamating two businesses carrying on the manufacture of enamelled ware, and since incorporation factories have been erected at Glasgow and at Wolverhampton for the manufacture of all classes of enamelled ware hitherto obtained from the Continent. The present issue is required to enable the manufacturing to be extended by erecting new works at Wolverhampton. The balance sheet as at June 30 last shows an issued capital of £94,536, and a reserve fund of £25,000. Goodwill stands at £20,000. It is pointed out that it is proposed later on to capitalise a part of the reserve fund by the issue of bonus shares to the Ordinary shareholders. The chief adverse feature of the prospectus is the absence of detailed information as to profits, and the only information given is that the annual average profits earned in the 5½ years ending June 30, 1915, amount to £14,787, the profits having been "of a progressive nature." On the average figure given the dividend on the total Preference capital is covered a little more than twice over, but of course it may be anticipated that the new capital will provide its fair quota to the profits.

Scottish Provident Institution.

(ESTABLISHED 1837.)

Funds amount to £16,000,000.

Commercial.

LANCASHIRE COTTON INDUSTRY.

Business continues irregular, and some sections of the market are meeting with more activity than others. Owing to the uncertain outlook and the high prices which prevail, buyers are not eager to purchase freely, but now and again orders are placed as a result of the belief that values before long will be still dearer. At the end of last week the United States Government published its official estimate of the American cotton crop for the current season, the figure being 11,161,000 bales. It is usual for forecasts from this source to rather understate the position, and a total yield of over 11,500,000 bales is expected. Prices in the raw material are rather easier, and the recent strength of the article has been largely due to the abnormal situation which prevails in Liverpool. Freight charges are very high and numerous difficulties are experienced in arranging shipments from America.

The buying has not been general, but some sellers of cloth have secured rather more business during the past fortnight. An improvement has shown itself in the demand for India, and owing to offers being raised and makers meeting buyers some fairly substantial sales have been put through, chiefly for Calcutta and Madras. Stocks of certain fabrics in the Indian bazaars are getting very low indeed, and it seems absolutely necessary that replenishments should be made, although our customers are very much averse to paying the prices required. As a result of this business some producers of shirtings have obtained a little relief. Developments in connection with domestic affairs in China are being watched very closely, and it is hoped that as a result of the events of the last few days more settled conditions will soon exist in that great Empire. Transactions of any weight for Shanghai have been quite exceptional. The smaller markets, both East and West, have not been active, and buyers are cautious. We continue to ship rather more freely to Egypt. Heavy goods for export are doing badly. Finishing and printing cloths are wanted for early delivery. A rather slow feeling prevails in home-trade circles.

Trade in home American yarns continues rather quieter, but in certain counts and qualities there is a healthy demand if supplies can be sent in at once. Occasional instances are mentioned of looms stopped owing to shortage of weft. Some producers of those numbers which are scarce are enjoying a very profitable margin at the present time. Compared with a few weeks ago, however, general buying has subsided. Shippers to India have been scarcely disposed to pay current rates for lots of quantity in bundles, and top prices have to be paid for 40's mule. Rather less activity is showing itself for the Continent. The lessened production of Egyptian yarns as a result of the shortage of operatives in Bolton and district is having rather a marked effect upon the position of spinners. Better prices are being obtained than for a long time back, especially in the coarser counts, and the undercurrent of demand is encouraging.

SCOTTISH COAL TRADE.

The only change that has taken place in the position of the Scottish coal trade during the last fortnight is the diminution of the available tonnage. It was pointed out in the last notes that there was tonnage available if the coal could be secured. That margin of hulls has now almost disappeared, not so much on account of being used for Scottish freight as of the demand for tonnage from other quarters attracting the ships away to ports where cargoes could more easily be obtained. The shortage of railway waggons is still crippling the output at the mines, and there is not a great surplus of fuel for export after the domestic requirements are filled. Of course it must not be forgotten that Governmental necessities have the first consideration, and anything that has been written regarding restriction of trade applies only to the purely mercantile aspect of the supply and demand. Even were waggons available in great numbers only a fairly moderate proportion could be utilised for mercantile trade, as the output at its best allows but a comparatively small margin for ordinary trade purposes. But that margin cannot be fully utilised owing to the shortage of railway waggons. The miners have decided to curtail their New Year holidays to two days, Saturday and Monday.

A meeting of the Debenture-holders in the Municipality of Para, Limited, is to be held on January 10 to consider an arrangement for transfer of the Company's concession to the Municipality in consideration of the handing over to the Company of £400,000 Funding bonds. The provisions are detailed in the advertisement that appears in our early advertisement pages.

MEETINGS
OF PUBLIC COMPANIES.

RUSSO-ASIATIC CORPORATION, LIMITED.

THE third annual general meeting of the shareholders of the Russo-Asiatic Corporation, Limited, was held on December 16 at Winchester House, Old Broad Street, E.C., Mr. C. J. Cater Scott (Chairman of the Company) presiding.

The London Manager and Secretary (Mr. J. P. B. Webster) having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with applause, said: Gentlemen,—I presume you will take as read the report and accounts. (Hear, hear.) The accounts which are before you I think are very simple and are self-explanatory, and show that the present position of our Company, summarised, is that we own 877,500 £1 shares in the Irtysh Corporation and £27,726 16*s.* 3*d.* in cash. Apart from our interest in the Irtysh Corporation, we also held an option on the Nerchinsk Mining Concession. We have, however, abandoned this venture in view of the negative results of our prospecting and drilling operations. Our present policy, with which I am sure you will agree, is to mark time for the present so far as any new ventures are concerned. We do not consider that it is a time to take up new ventures and to incur fresh responsibilities. (Hear, hear.) Since the formation of the Company I have had the pleasure to address you two or three times, and on each occasion I think you will agree that we have had very satisfactory reports to put before you, and I think you will agree also with me that our position to-day is even more satisfactory than at any previous time in our Company's history.

The Irtysh Corporation.

I should like to remind you that when we met a year ago we had just formed the Irtysh Corporation, Limited, to handle our extensive metallurgical, coal, and railway interests in Siberia, with which you are familiar, under the names of the Ridder Concession and the Ekibastous Coal Property. I am to-day able to make a statement with reference to the affairs of the Irtysh Corporation from information put at my disposal by the directors of that Company, they being of the opinion that this procedure is quite in order in view of the fact that we hold, together with our partners, practically the whole of the issued share capital of the Irtysh Corporation. The Irtysh Corporation, Limited, has recently issued a circular to its shareholders, a copy of which has been sent to you, and which you have doubtless all perused. That circular sets forth the results which have been accomplished during the past year. These results are stated in such detail that there seems but little left for me to say, but I would draw your attention to the more salient features.

Progress of Railway Construction.

In the first place, it is interesting to note that fully two-thirds of the excavation for the railway from Oustkamenogorsk to Ridder was completed as early as September, thus giving strong hopes of completing the balance of excavation before the end of the present year. Rails and rolling stock for this line, in spite of all the difficulties created by war, are in process of delivery, and it is anticipated that the railway will be in operation by the summer of 1916. In a business such as that of the Irtysh Corporation, where large quantities of coal, minerals, timber, and general mining supplies have to be handled, amounting in the aggregate to a very large tonnage, adequate transportation facilities are of the first importance. In that respect they are fortunate in having the Ekibastous railway in good working order. In addition to this, the early completion of the Ridder railway and the increase of the fleet on the Irtysh River to a total of eight steamers and 21 barges places the enterprise in a safe position so far as transportation is concerned for the next few years.

The Comfort of Employees.

Of scarcely less importance than transport arrangements is the question of housing accommodation for workmen and employees which has been carried out on as extensive a scale during this year as facilities would permit. The Irtysh Corporation is continuing the policy inaugurated in other allied mining camps in Russia of organising everything very carefully and looking after the comforts of the men in every way possible. (Hear, hear.) Churches, schools, and clubs have been built; a system of co-operative stores instituted from which, incidentally, the Company makes no profit, keeping down prices to a level which does not exist even in the shops of the large towns; a medical staff has been engaged and hospitals secured, and I am pleased to say that I have it on the authority of the gentlemen who recently returned from the properties that, despite the initial difficulties in looking after the welfare of our employees, difficulties attendant on every new mining enterprise, the problem has been very successfully handled, and everyone is happy and satisfied. I am sure that the shareholders will all realise the vital importance of looking after the welfare of the men if we are going to get the best work out of them, and that the relations between the staff and the workmen should be of the very best. (Hear, hear.)

Metallurgical and Mining Plant.

You will also notice that a great deal of work has been done in the way of building metallurgical and mining plant, both at Ridder and Ekibastous. Although what has been done so far is only a beginning, when considering the ultimate end, we have the satisfaction of knowing that the necessary foundations for this great enterprise have been successfully paid, that the work of expanding the scale of future operations will proceed steadily on safe lines, and that each succeeding year's operations will partake more of the nature of routine and less of the nature of preliminary enterprise.

Ore Reserves.

Turning now to the most important question of ore reserves, you will notice that the past year's work at the Ridder Mine has resulted in a large increase in the ore reserves both in tonnage and in profit value. In November 1914 these ore reserves were estimated by Mr. H. H. Knox at 2,448,000 tons, having a profit value of £7,400,000. A recalculation made in August 1915, and taking into account the new ore proven since Mr. Knox's examination, increases these figures to 3,174,000 tons, having a profit value of £10,800,000. (Hear, hear.) Both Mr. Knox's estimate and the present estimate were based on the same figures of cost. Experience, however, obtained in the mining and the milling of the ores on a commercial scale indicates that the estimate made by Mr. Knox, both as to working costs and recovery of metals, was most conservative, and ultimate higher recovery and lower working cost than those taken by Mr. Knox, are, I believe, therefore assured. But we have not reduced the estimated cost, preferring to work on Mr. Knox's conservative figures. Both estimates are based on the same market prices for the different metals, and take no account of the higher prices at present ruling. In proceeding upon this conservative basis, it is felt that the best interests of the shareholders are being considered. Both Mr. Knox's estimate and the present estimate take into account only ore in the Ridder Mine between the vertical planes of holes "D" on the south and "K" on the north, and includes nothing north or south of these respective planes, and nothing below the plane of the boreholes. (Hear, hear.)

Probable Extension of the Ore Body.

This is not to say, however, that the ore body is limited by these planes, which are 750 feet apart north and south, as at a distance of 375 feet north of the "K" plane, a borehole "N 1" was put down and 17 feet of concentrating ore was found. Again, at a point about 500 feet south of the "D" plane a borehole "P-1" was put down and encountered an ore channel 293 feet wide, containing 58 feet of very profitable ore. (Applause.) Surface indications beyond this drill hole point to a still further large extension to the south. None of the ore shown in these extensions is taken as ore in reserve, pending close boring in the same manner as the Ridder ore body, but I think it is not unfair to believe that we had almost in sight a very large expansion of the ore body. Owing to the scarcity of labour and fuel, it has been possible only to run two drills intermittently during this summer, and, therefore, the prospecting of the Sokolni ore body and of the ground between Ridder and Sokolni has proceeded but slowly. The old workings of the Sokolni Mine have, however, been sampled, and the results obtained are considered very favourable. Further than this, I understand that the preliminary geological work during the year has resulted in throwing considerable light upon the conditions of occurrence of the Ridder and Sokolni ore-bodies, thereby indicating other favourable localities for future prospecting. I am only mentioning this to show you that the ore-producing possibilities of the concession are by no means limited to the Ridder and Sokolni Mines. (Hear, hear.) These figures will serve to show you the extremely valuable nature of the Ridder concession, but you must remember that the estimated figures of profit, large as they are, by no means comprise the whole of the profit to which the Irtysh Corporation may legitimately look forward, for they do not take into account the Ekibastous coal property.

The Ekibastous Coal Field.

Now, it is a very difficult matter to place a value upon a coal mine, and still more difficult to do so in the case of a large coal field like Ekibastous. You will notice from the circular that, granted an adequate supply of labour, 120,000

tons of coal can be produced next year, of which about 65,000 tons will be for sale. When I tell you that, apart from their own industrial requirements, demands already received indicate that 900,000 tons per year can be sold just as soon as the mines are ready to supply it, you will realise what a magnificent asset the Ekibastous property really is. The quantity of coal is, apparently, practically unlimited, and the question of adding to profits from the sale of coal and coke is merely one of providing the necessary preparatory work and equipment.

Estimated Profits for 1916.

Turning now to the question of profits, you will remember that in the prospectus of the Irtysh Corporation it was estimated that profits in the year 1916 would be earned at the rate of £185,000 to £235,000. I am informed that the directors see no reason to modify this estimate, and are of the opinion that, should the high prices for metals at present ruling continue during 1916, the profits will be at a higher rate, and it is estimated that the recoverable value in the untreated stocks of concentrates at the end of the year 1916 will be at least 2,500,000 roubles. It must be understood, however, that the realisation of this position depends on the successful completion of the programme detailed in the Irtysh Corporation's circular.

Shareholders Congratulated.

I think you must admit that the position I have described is one on which we can congratulate ourselves. It is rarely in a new metallurgical undertaking of this magnitude, while the enterprise is still only in the preliminary stages of development, that profits can be earned at this high rate in the second year after the formation of the Company, notwithstanding the great difficulties which had to be overcome owing to the War. The success attained under these difficulties is, to a great extent, due to the help and interest shown in many ways by the Russian Imperial Government, in facilitating our transport arrangements and in supplying our labour requirements by prisoners of war. The Russian Government is greatly interested in the immediate development of the lead and zinc industry in the country, as there is practically no production of these metals within the Empire, and the Government, as well as other consumers, have been obliged to purchase and import all their requirements from abroad. The undertaking is fortunate in having its Technical Committee composed of very eminent engineers, well known to you; these gentlemen are men of large experience and standing in this particular mining and metallurgical industry. The special thanks of the shareholders are due to Mr. A. P. Ivanoff, the managing director for the Russian Companies, a man of great capacity and energy, and whose loyalty in most trying circumstances has conduced to a great measure to the success of last year's work, and also great credit is due to Messrs. Trouschkoff and Lessig, the general managers of the Ekibastous and Ridder Companies in Russia, and to the whole of the staff of these Companies. It is difficult to name every member of the staff, but, none the less, we must all appreciate how everybody connected with the business must have loyally worked under most difficult circumstances, for otherwise the results which are now promised would certainly not have been obtained.

Financial Position.

Now, gentlemen, we come to the question of finance. When the Russo-Asiatic acted as parent to the Irtysh Corporation in December of 1914 there were offered to the Russo-Asiatic shareholders 500,000 6% Convertible Debentures, carrying an option of 250,000 shares at par at £1 per share for three years, or for one and a half years after the War, whichever period be the longer. There were also 250,000 £1 shares given under option to the underwriters on the same conditions. Of the total number of 500,000 option shares, so far only 55,000 have been taken up and paid for by the underwriters. It was stated in the prospectus, on the authority of an independent expert of high standing and experience—Mr. H. H. Knox, who is personally known to many of you in this room—that the sum of £500,000 in cash must be expended to bring the properties to the producing stage. In this estimate Mr. Knox did not and could not, at the time, make any allowance for working capital required to start the Corporation's business operations, but it was expected that this working capital would be provided out of the Option shares which would be called. The directors of the Irtysh Corporation are of the opinion that Mr. Knox's estimate as to capital expenditure will be exceeded by about 10% to 15%, owing to the special difficulties created by the War and the higher cost of labour, machinery, and supplies, prices of some materials having risen in many cases as much as 300% and even 400%. Apart from these reasons, the Irtysh Corporation, in order to make certain of river transport for all their requirements for the next few years, decided to take advantage of an opportunity to purchase a larger fleet than had been intended, to which I have already referred, this being in the vital interests of the business.

Working Capital Requirements.

To provide for the working capital it is estimated that the Corporation will require during the next nine months £150,000 to £200,000 in addition to their present resources. The provision of this money would enable the Irtysh Corporation to accumulate concentrates and coal both at Ridder and Ekibastous to provide for all the material necessary to be carried in large stocks, and thus to guarantee the continuous treatment both of ore and of concentrates at the smelters and to finance their products to the point of sale. In this connection it must be remembered that the cash receipts for metals delivered and concentrates produced during 1916 come in only partly during that year and the remainder in the first half of 1917, whereas all the expenses for 1916 and a portion of those for 1917 have to be incurred during the year 1916.

The Irtysh Options: An Appeal.

As I mentioned before, of the 500,000 shares under option, out of which the working capital has to be provided, only 55,000 have been so far exercised, and I must appeal to all those who hold these options not to wait for one and a half years after the War to put up their money, but to help the Company by doing so now, and not later, when the Company will have large financial resources of its own and will not require this money. Further, by paying for their Option shares now they would be helping the Corporation most materially, as, owing to the high rate of exchange at present ruling between England and Russia, a much larger number of roubles is produced for every pound sterling than would be the case in normal times, and I must again appeal most strongly to all holders of Option shares to support the undertaking at the present time by exercising their Options immediately by calling their shares at £1 per share. The Irtysh Corporation is on the point of reaching the production and profit-earning stage, provided the necessary financial support is forthcoming. As I have endeavoured to show you, the prospects are brilliant—so brilliant that I hesitate to attempt to place a figure on them, and we are anxious to do all in our power to conserve to the Russo-Asiatic and Irtysh shareholders all the profits which will, we believe, come to them in the future, and I have full confidence—now that a definite statement has been made as to the requirements of the Irtysh Corporation—that all those holding Options on Irtysh shares will come forward with the necessary support and so avoid the necessity of making other finance arrangements which must necessarily be more expensive. (Hear, hear.) May I again remind you that probably in no mining venture have shareholders ever held such a unique position—(hear, hear)—for they come in on absolute ground-floor terms, no profits or commission have been paid ahead of them. (Hear, hear.) Surely it is only in the interests of Option holders to support their own undertaking, one of such great promise and value, while at the same time you will be doing a patriotic thing in helping in a very practical way the Allied cause in this great War by developing the production of zinc and lead for the Russian Empire which, at the present time, is forced to buy these metals abroad, and for which I believe at the present moment our own country has to find the gold. I therefore ask members of our Company who hold these Options to support the undertaking by exercising their Options and calling shares from the Irtysh Corporation at 20*s.* per share.

The Great Possibilities of Irtysh.

It has always been our desire and custom to take our shareholders fully into our confidence, and I have to-day endeavoured to state the position as fairly as I can without overstating it, erring, I believe, if anything, on the safe side; but whilst, on the one hand, it would be unfair to you to hold back knowledge of the great possibilities of the venture in which you are engaged, so, on the other, it would be equally unfair to minimise the prospects as we see them. I have endeavoured to give you a true picture of our prospects as they appear to us, and I now leave you to form your own conclusions, believing that the result will be a response to our demands for further capital for the Irtysh Corporation which will at once remove any cause for seeking capital outside our shareholders. Gentlemen, before I sit down I should like to refer to the technical committee, and, as I am speaking as the Chairman of the Russo-Asiatic Corporation, perhaps I am a little infringing on what is properly the duty of the Chairman of the Irtysh Corporation. The technical committee consists of Mr. A. P. Ivanoff, to whom I have already referred, Mr. T. J. Jones, Mr. D. P. Mitchell, and Mr. R. Gilman Brown. They are all closely associated. I do not put them in that order of merit; I simply put them as their names occur to me. We all know them, and we all value their services. (Hear, hear.) Mr. Jones and Mr. Mitchell have spent a great deal of time out on the property of the Irtysh Corporation, and have striven in every way possible to promote your interests. Mr. Gilman Brown has also been out there, and at home watches everything most carefully to protect your interests. I feel that it is due to them, much as I dislike bringing any particular names into prominence, that we, the shareholders of the Russo-Asiatic Corporation, should cordially acknowledge the good work they have done for the enterprise in which we are interested. (Applause.) But there is another name which I wish to mention. It is the name of Mr. Urquhart. (Applause.) I have had the pleasure of the acquaintance of Mr. Urquhart for a great many years, and we have gone through some times of very considerable difficulty, but throughout Mr. Urquhart has stood out as a man of the soundest level sense

and the greatest integrity, and, speaking now, as I say, from my experience of Mr. Urquhart over a great many years, I can confidently state that any company which has him as its managing director can look forward to the future with confidence. (Applause.) I now move the adoption of the report and accounts, and if any shareholder wishes to make any remarks or to ask any questions before I put it I shall be pleased to answer them.

Mr. Leslie Urquhart (managing director) : Before I second the adoption of the report and accounts I should like to thank you, Sir, for the very kind words you have used about my work, and to thank the shareholders for the kind manner in which they have responded. In doing so, however, it must be understood that in a great undertaking of this size no one man could have carried through the work alone. What has been done is due greatly—entirely, I should say—to the loyal and faithful co-operation of my co-directors, the technical committee, and everybody concerned with the Companies, both English and Russian. (Hear, hear.) I therefore feel that, in showing your appreciation of what I may have done, you are through me expressing appreciation of the work of myself and everybody connected with the Companies, and I thank you, gentlemen. I beg to second the adoption of the report and accounts. (Applause.)

Intrinsic Worth of the Shares.

Mr. Francis Moore : Mr. Chairman, before you put the resolution to the meeting there is one thing that seems to me to stand out pre-eminently before us. Your estimates are extraordinarily conservative, if you really take the results of the boreholes and the developments on Ridder. You have limited yourself to about 750 feet, but according to your own statement made just now you have got another 500 feet to the south and another 350 feet to the north. If that is the case, judging by your estimates of what the ore bodies are (I may be wrong : if I am wrong I shall be glad if you will correct me). Well, now, if that is the case, taking your estimates alone, it seems to me that the value of the Irtysh shares at the present moment is staring us in the face at £6 a share, and you can probably double that. (Laughter.) Gentlemen, you laugh, but I believe I am absolutely on the conservative side when I say that, and you can check the figures yourselves. I believe you can really double that at least, and if that is the case your Russo-Asiatic shares—and after all this is a Russo-Asiatic meeting—have a value which you can estimate for yourselves ; I mean the intrinsic value apart from the market prices which prevail owing to war conditions. Your Russo-Asiatic shares are probably worth as a minimum £16.

A Shareholder : £20 to £25.

Mr. Moore : My friend here says £20 to £25, and I think he is right. In your speech just now, Mr. Chairman, you referred to the coal mine at Ekibastous. I have been over that field, and I went into some very interesting information on the spot as to the number of millions of tons—I have forgotten whether it was not billions of tons—of coal there, calculating on the basis of the coal which has been developed, which is about 200 feet, I think. Taking only two seams, which I think are about 4 feet thick each, it runs into probably billions of tons. You referred just now, Mr. Chairman, to a probable output of 900,000 tons per annum. It seems to me that is gigantic. I hope I am not asking an indiscreet question, but how long do you consider it will be before you can arrive at such a production as 900,000 tons, or can you give us some idea? There is one other point which apparently has not been dwelt upon at all : What is the reasonably probable cost of production and the probable profit per ton of coal? This information, I think, if you can give it to the shareholders would be very interesting. I shall be much obliged if you can possibly give us some reply on those points, Mr. Chairman.

Questions Answered.

The Chairman : I should like to say first of all that I am not a prophet. At the present time it is almost impossible for one to estimate how long it may take to bring up the coal production at Ekibastous to 900,000 tons per annum. It depends on two things. The first is the necessary capital being forthcoming, and the second is the supply of labour. The supply of labour at the present moment, as I have endeavoured to point out to you, is an exceedingly difficult question. We have been helped, as I have also told you, by the action of the Russian Government; but I should be very sorry, and I think all who sit on this side of the board would be sorry, to express an opinion as to the future supply of labour so far as we can obtain it. As to the cost of production and the selling price, I do not think it is quite wise at a public meeting to discuss such figures, and again I would ask you to leave that matter entirely to us. (Hear, hear.) Now when I come to the reserves or the ore body which we have at Ridder, I quite admit the justice of the criticism. We have only taken in the amount of ore comprised between those two points, 750 feet apart, which I indicated. We have limited ourselves to that because we consider that there it has been absolutely and definitely proved. As I told you just now, we believe we have in sight a very much larger amount of ore, but it has not been definitely proved at the moment, and, although we believe it is there, we think it is better not to attempt to estimate it until we can do so with, we think, a little more reliability. (Hear, hear.) Besides, I am afraid some shareholders are greedy. (Laughter.) I should have said that the figures we have given you are amply good enough—(laughter)—and I should prefer to keep to that. This is what we are trying to do. We want to give you all the information we can. We want you to see what a valuable property we believe you have. We do not wish to overstate it, and we wish for the sake of our shareholders to have some little margin behind us so that if perchance anything goes wrong there will be something to fall back upon; and I think the line we are adopting is the line which is most in the interests of the shareholders. (Applause.)

Mr. Moore : Mr. Chairman, I thank you for your answer. I am perfectly satisfied, and with your original estimates I am more than satisfied. I thought I might bring out that little point : that you are really taking practically the minimum of the ore bodies. I thank you very much, Mr. Chairman.

The resolution was then put to the meeting and unanimously adopted.

The Chairman : I have now to propose the re-election of our valued friends Mr. Gilman Brown and Mr. H. C. Hoover as directors of the Company.

Mr. Urquhart seconded the motion, which was unanimously adopted.

The Board : An Appreciation.

Mr. D. J. Morgan : Mr. Chairman, Ladies and Gentlemen,—I have very great pleasure in proposing the reappointment of the auditors, because I know from experience that you have got good auditors who will do their work excellently well. But unless this Company was conducted and worked in the way it is being worked, the auditors would have very little satisfactory business to do. You have got a first-rate Chairman, however, and you have got an eminently good body of directors who thoroughly understand their job—not people who go on simply as figure-heads, but gentlemen who thoroughly understand the work, and I am perfectly certain that, working as they do loyally and excellently with their Chairman, they will have for our auditors as satisfactory accounts as they have to-day, or more satisfactory still. With those remarks I have very great pleasure in proposing that Messrs. Deloitte, Plender, Griffiths and Co. be re-elected auditors of the Corporation for the ensuing year.

Mr. F. W. Cook seconded the motion, which was unanimously adopted.

Mr. S. L. Lazarus : Gentlemen,—The last speaker partly took the words out of my mouth when he mentioned the good work and loyalty of the Chairman and his board of directors. He having said so much, there remains little for me to say except to put to you a resolution which I am sure you will receive enthusiastically, and that is a vote of thanks to the Chairman for presiding here to-day. (Applause.)

Mr. R. B. Scott seconded the motion.

The Chairman : While thanking you for your kindness, may I suggest that all the duty of the Chairman is to come before you and speak to you and preside over your meetings, but there are many connected with the Company whom I have already mentioned to you who are working continuously in your service, and may I suggest that you should make your vote a vote of thanks to the Chairman, the board of directors, and the staff (Hear, hear.)

Mr. Lazarus altered the form of his resolution accordingly, and it was carried unanimously.

The Chairman : I can only thank you very much indeed for your kindness.

The proceedings then terminated.

CAPE COPPER COMPANY, LIMITED.

THE twenty-eighth ordinary general meeting was held on December 15 at Cannon Street Hotel, E.C., Mr. T. Blair Reynolds (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the working profit for the past year was £33,212, as compared with £17,244 in the previous year. The receipts from copper ores and metal, £105,234, were practically the same in both years. In the balance sheet the Briton Ferry smelting works account showed £15,000 to have been spent during the year, and he was glad to think they were near the end of capital expenditure there. Under the head of the Rakha Hills Mines there was an increase of about £67,000, which included the permanent mine plant and the concentration plant which had been installed during the year. An examination of the year's work, resulting in the payment of Preference interest and a modest dividend of 1s. per share on the Ordinary shares, showed conclusively that the Company had not made any of the so-called war profits. Referring to the Cape mines, he said that at Nababeep the estimated reserves—160,000 tons of 5% ore—were the same as at the end of the previous year, although about 48,000 tons were extracted from the underground workings. The old O'okiep mine, from which the bulk of the Company's profits in the past had been derived, was showing

constantly diminishing returns, and to make good the declining profit therefrom they must now look to the Rakha Hills Mines in India. In Rakha they had a mine of considerable proved and prospective value. They had at the end of August ore reserves of 345,000 tons, showing an assay value of 4%, or a gross copper content of nearly 14,000 short tons. The mine was provided with a complete electrically driven equipment and a concentrating plant to deal with a mine output of 300 tons a day. The quantity of ore in sight thoroughly justified the starting of the reduction plant. The directors were disappointed that the Rakha Hills Mines were not producing to-day. By carrying the reduction process a stage further in India—that was by smelting the concentrates there—the product would be of higher grade, the same copper being contained in a less weight of material, and so freight would be saved. By the use of a smelter at Rakha they were advised that they would make a material profit even under present conditions, and, therefore, when the freight problem became serious the smelter was ordered. They were told that it ought to be working in six months. He mentioned that period under present conditions with all reserve, but he did hope refined copper from Rakha would have been sold when they next met the shareholders, and that thus the new era in the Company's affairs, for which the directors had for a long time worked and the shareholders had paid, would be inaugurated.

Mr. John E. Champney seconded the motion, which was carried unanimously.

PAN DE AZUCAR NITRATE COMPANY, LIMITED.

The fourteenth annual general meeting of the Pan de Azucar Nitrate Company, Limited, was held on December 14 at Winchester House, Old Broad Street, E.C., the Hon. Herbert C. Gibbs (the Chairman) presiding.

The Acting Secretary (Mr. A. H. Short) having read the notice convening the meeting and the report of the auditors,

The Chairman said: This is the first occasion, in the 12 years' life of this Company, on which the board have been unable to recommend the payment of a dividend. The first full year's working of the Company was from June 1903 to June 1904, and from that year to the year ended June 1914 it had paid 119% in dividends, or at the rate of nearly 11% per annum; it had repaid the issue of £80,000 Debentures, and it had accumulated a reserve of £40,000, so the Company had a pretty good record.

Effect of the War.

Then came the War, and with it a fall in the price of nitrate, which made work for this Company impossible; therefore, we closed the oficina on August 7, 1914, and did not open it again till October 11, 1915, when prices had recovered, so you will observe that except for about five weeks the works have been closed during the whole of the year now under review. The result is that the total production which we have brought into the accounts is only 43,500 quintals, as against 343,221 quintals in the preceding year. You will observe that the loss in working was £5,383, which is a large loss on the small production and calls for some explanation. Those who are at all familiar with nitrate-making will readily understand that it is impossible to judge of the amount of nitrate produced with absolute accuracy. The accuracy of the estimate depends partly on the temperament of the manager and partly on the care which he brings to bear on this important matter; and I regret to say that when the oficina was closed and the nitrate accounted for it was found that there had been an over-estimate of production of 37,000 quintals, all of which loss necessarily fell upon the year under review. Thus, though in the main it is the War which is responsible for the bad results of the year, they are also partly due to the fact that we had taken credit in the preceding year for nitrate which had not been produced. I think we may assume that the new Manager who is now in charge will be careful to see that this error will not be repeated.

Transfer from Reserve.

The total loss for the year, including loss in working, stoppage expenses, income tax, repairs and other debits, is £15,420, and we propose to write off practically the whole of this by a transfer of £15,000 from reserve account, so that the current year may start free from that incubus, and with practically the same carry-forward—namely, £5,356, as that of the year under review. We are the more disposed to recommend this course because the works remained closed, or at all events were not working to their full capacity, for nearly four months of the current year, and, therefore, though the remaining eight months ought to show some profit, there will not be a full year's working to deal with next year, and there will be the expense of maintaining the oficina in an unproductive state during nearly four months. It seems, therefore, not unreasonable that we should anticipate these circumstances in the accounts before you. We have spent a certain amount of money while the oficina was closed in improving the water supply and in erecting a conveyor belt, and though these improvements were necessary we cannot look for any reduction in costs over the year 1913-14, when, as I told you, they were about 6*s.* 6*d.* a quintal. These costs make the various processes for increasing the extraction of nitrate, and thereby reducing costs, of great interest to the Company, and your board are following the experiments with close attention. I do not think that I need discuss the accounts before you in detail, as they are quite clear. I may explain, however, that the amounts of bills receivable and payable, which appear large for a Company which had stopped working, are due to the sale of the stock of nitrate which we had held for a recovery in prices and to the land freight and duty which became payable upon it. You may have noticed also that London office expenses have been reduced; this is mainly due to the reduction in directors' fees. No doubt the year under review has been a bad one for nitrate, but when I look back on the condition and prospects of the industry last year, when I had the honour of addressing you, I am bound to say that producers are exceedingly lucky to have got through their troubles so quickly and with so little permanent damage.

Present Position of the Industry.

The price of nitrate is equal to the average of recent years, and the industry has almost resumed its normal course and rate of production. The only difficulty that still exists—and that, of course, is a serious one—is the scarcity of tonnage, but with the cessation of wheat shipments from Australia and the reopening of the Panama Canal—when these things occur—some relief should be experienced. I now beg to move: "That the directors' report and statement of accounts for the year ended June 30, 1915, now submitted, be received and adopted."

Mr. Brien Cokayne seconded the resolution, which was carried unanimously.

The retiring director (Mr. Brien Cokayne) and the auditors (Messrs. Price, Waterhouse and Co.) were re-elected, and the proceedings terminated.

TRINIDAD LEASEHOLDS, LIMITED.

The second ordinary general meeting was held on December 15 at the Company's office, London Wall Buildings, Mr. T. J. Milner, the Chairman of the Company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the latter covered a period of nine months to June 30, 1915. In view of their limited resources the board decided that the Company's interests would best be served by concentrating work on Forest Reserve, and pushing forward with all possible despatch the further development of that property. The bulk of the work undertaken had been carried out at the western end, and they had in that section an area of approximately 150 acres, which should yield a considerable tonnage of oil. They were told that the lateral extension of the oil-bearing sands in that vicinity would probably be found to be considerably greater than was at first estimated. A well put down on the eastern end of Forest Reserve came in satisfactorily, and that additional information proved the existence of payable oil sands at both extremities of the property on the anticline which ran through its entire length. In the middle of the property indications were not quite so favourable for the presence of oil as in the western and eastern portions. Out of a total of nine wells drilled, or drilling, at June 30 last, seven were yielding a steady and satisfactory production of oil of high quality. Nine wells were now producing oil, and others were in course of drilling. Recent drilling had disclosed the presence of two additional oil sands, making five in all, in the Upper Tertiary formation, and hopes were entertained that the Lower Tertiary would also prove oil-bearing. At Guayaguayare, in January and February last, several of the wells sunk by the former lessees of that property were cleaned out, and during a fortnight's test gave a production of 400 tons of a high-grade light oil. From the little knowledge they possessed concerning the field at the present time the prospects appeared to be favourable. The agreement with the Trinidad Government to lay their pipe-line along the railway was signed in March last, and subsequently they obtained the Government's permission to connect their Forest Reserve field with the railway by pipe-line laid along the public road. When the pipe-line was completed their production was expected to be, in the first instance, at the modest rate of about 1,000 tons a week, but the extent of future operations would be largely governed by the market they found for their oil. From the progress so far made it would appear that the pipe-line should be receiving oil next spring. As to the financial position, at the end of June there still remained £35,000 uncalled against the loan of

£60,000. With their heavy commitments that balance became exhausted. They had been able to arrange with the Central Mining and Investment Corporation for further advances up to £75,000.

The resolution was seconded by Major H. L. Sapte, and carried unanimously.

VAN RYN GOLD MINES ESTATE, LIMITED.

The twentieth ordinary general meeting was held on December 15 at Winchester House, Old Broad Street, E.C., Mr. F. A. Gillam (Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—For the twentieth time in the 21 years during which I have been your Chairman I have the pleasure to preside at the annual general meeting of this Company. I think you will agree that the report and accounts which we submit to you to-day (and which I will ask you to be good enough to take as read) are satisfactory documents when one takes into consideration the abnormal circumstances ruling to-day. You will note that there has been a small decrease in the amount of gold produced, resulting from the fact that the average value per ton of the ore shows a reduction as compared with the previous year. This has been partly offset by a reduction in the working costs of 1*s.* 2*d.* per ton, so that the net decrease in the profit is but 8*d.* per ton. With regard to ore reserves, you will note from the Manager's figures that our fully developed ore reserves remain at very nearly the same tonnage as they were a year previously, but show a slight drop, fractional only, in the average value. Generally speaking, the operations of the mine during the year have run smoothly, and more or less on normal lines.

Good Supply of Labour.

With regard to capital expenditure, you will note with satisfaction that this has been reduced to a minimum, and that we have not had to increase it during the current year. We hope that this item will not figure again very largely in our accounts. In any case, whatever the capital expenditure is, we have made it a practice always to write it off during the year in which it has been incurred. That practice has been adhered to in the accounts before you. The question of our water supply is, I am pleased to say, one which no longer causes us any immediate anxiety. You will see from the directors' report that, owing to copious rains during the last wet season, our dams are full, and will provide the requirements of the mine for some time to come. As to labour, there has been a good supply of natives during the year under review. To some slight extent the supply of white labour has diminished, thus necessitating the curtailing of some of the work done by white workers at the mine. The fact that the supply of native labour has not been interfered with has enabled us, fortunately, to keep up our development, with the result, as already mentioned, that our reserve of developed ore has been maintained. It is always a pleasant thought to dwell on that these ore reserves of nearly two million tons have been paid for out of past profits. While on the subject of development, I take the opportunity of informing shareholders that since the beginning of the current financial year we have reduced from 1*s.* 9*d.* to 1*s.* per ton milled the amount charged to working costs for development. Experience during the past few years has shown us that the amount charged to working costs for development has been more than enough to pay for current development work, while still maintaining our reserves. Consequently, under existing circumstances we felt we were justified, with the concurrence of the Managing Director, in reducing the charge to the figure I have stated. The campaign in South-West Africa, so brilliantly conducted and successfully carried through under General Botha, has naturally involved us in certain heavy charges on the other side. A special war levy has been put upon the mines, amounting to half the ordinary profits tax. The contribution due from this Company under this heading alone will amount to £12,000, and we must also face the possibility of other expenses incidental to the present state of affairs.

Interim Dividend.

It is perhaps unnecessary for me to mention that these abnormal expenses have naturally influenced the board in considering the question of the amount of interim dividend we should distribute for the current half-year. Added to this is the important fact that our gross income from gold for the five completed months of the current year is not so large as for the corresponding period of last year by approximately £20,000. Consequently the board has had to decide upon the exceedingly delicate question of choosing between two policies—namely, continuing the old rate by entrenching somewhat seriously on the Company's cash reserves, or adopting the less pleasant, but, in their opinion, sounder one of reducing the interim dividend. After careful consideration they chose the latter, and I am authorised to announce the declaration of an interim dividend of 17½%, or 3*s.* 6*d.* per share, for the half-year. I feel sure that shareholders will appreciate the feeling of prudence which actuated us in making a reduction which brings the amount to be distributed within the actual net profits earned during the period. Shareholders will observe that, according to our balance sheet, we have a large sum invested in the War Loan.

Untiring Care of the Messrs. Albu.

In conclusion, gentlemen, I should like to state what a pleasure it is to me to preside at these annual meetings, more especially when, in spite of all the difficulties and restrictions that hamper operations when a country is in a state of war, we are able to come to you with the results that have been reported. It is our usual custom to pass a vote of thanks to Sir George Albu and his staff for their efforts on our behalf, and I think that on this occasion, more than ever, our thanks are due to him and them for their untiring care of our interests. I now formally move that the report and accounts submitted to you be received and adopted, and I will ask Mr. Burns to second the resolution.

Satisfactory Cable Message.

Mr. L. B. Burns: Gentlemen,—I beg to second the adoption of the report and accounts. This morning we have received a cable from Sir George Albu, our Managing Director, which I will read to you. He says: "The number of white employees of the Van Ryn on active service is equivalent to 10% of the underground and 17% of the surface complement. The married men receive half-pay from Company in addition to Government separation allowance; single men with dependants up to half-pay; single men without dependants quarter-pay from Company during active service. Mine continues to develop highly satisfactorily both as regards current developments and indications given by reinvestigation old workings." I think, gentlemen, you will all agree that this is a very satisfactory message to have received from our Managing Director. If I may add a word on my own behalf in support of the resolution, I should like to say that I think it is a matter of satisfaction and congratulation that, notwithstanding the difficult times in which we are living—a world-wide war, in the throes of which we are—the Van Ryn Company is able to make so good a show and to place before you so good a report as that which is submitted to-day. I have much pleasure in seconding the resolution.

The resolution for the adoption of the report and accounts was carried.

ROUMANIAN CONSOLIDATED OILFIELDS, LIMITED.

Mr. W. Watson Rutherford, M.P., Chairman of the Company, presided at the annual general meeting of the Roumanian Consolidated Oilfields, Limited, held on July 15 at the Cannon Street Hotel, E.C.

He observed that they held extensive areas of oil land and two refineries, and they operated over 175 kilometres of pipe-line and over 50,000 tons of storage. Their petroleum output was 103,920 tons, as against 66,232 last year, an increase of 50%. The gross Roumanian profit was £172,515, against £147,541 last year. The year's net available balance of profit (subject to exchange) was £105,616. Adding £93,866 brought forward (being the net result of the two first years) the balance to credit of profit and loss account was £199,482. This was after writing off ample depreciation, £46,861, and after taking stocks at cost. They then raised the general reserve fund from £60,000 to £100,000. After making other reservations, including over £26,000 for the difference in exchange, they proposed to carry forward £113,451. The increased production and the satisfactory financial results had been achieved in spite of all the difficulties arising out of the War. Having made a running commentary on the accounts, he observed, in regard to the future and immediate prospects of the Company, that Roumania was a rich, self-contained, well governed country with an industrious population. Its wheat and other grain products were second to none. The Roumanian petroleum output had steadily increased year by year and now exceeded 2,000,000 tons per annum. It occupied a commanding position for supplying the ever increasing demand of the Mediterranean Littoral with light, fuel, and motive power. He believed the Company had now attained such a position that, with the return of normal conditions, it might be relied upon as an established dividend-paying concern. He believed that if Roumania joined in the War at all it would eventually join us at the time and under the conditions when it would be most advantageous both for them and for us that they should do so. They had a splendid national army, well equipped and thoroughly loyal, and when they did join their forces with us and our Allies it would be the beginning of the end of this great War. In regard to the safety of the oil wells, his own opinion was that in any event such safety was assured. They were too valuable to be destroyed by either side, and moreover they were protected by being under the shadow of the highest portions of the Carpathian Mountains, only penetrated by four or five passes, each of which he believed had been recently made impregnable. He moved the adoption of the report, which was carried unanimously.

POWER-GAS CORPORATION, LIMITED.

The fifteenth ordinary general meeting was held on December 16 at the Westminster Palace Hotel, Victoria Street, S.W., the Right Hon. Sir Alfred Mond, Bart., M.P. (the Chairman), presiding.

The Chairman, in moving the adoption of the report and the accounts as submitted, and the payment of the dividend as proposed therein, said: I think we have reason to congratulate ourselves on the final result of our balance sheet during the very difficult time through which we have been passing. Our balance sheet being made up from September to September, the first few months of the financial year under review taking place just after the outbreak of war were naturally not favourable to an engineering business like ours, and it was difficult to know what the future would hold in store for us. Fortunately, as far as we are concerned, we recovered from the cessation or postponement of orders in hand which took place at the beginning of the year by turning our efforts in directions where they were required. Of course, the labour difficulty has been a source of anxiety [illegible] time in industry, and I sometimes think it would have been better if the number of skilled men who have left our and other works had been induced rather to stop at home than to go to the Front.

The Balance Sheet.

With regard to the balance sheet, taking the assets side first, there is no alteration in the first item. As regards the second item, there is a very considerable increase over last year's figures in the advances made to Ashmore Benson Pease and Company, Limited, for additions to plant and working capital. It is mainly in the latter item that the greater part of the increase has taken place. There are one or two reasons for this—money owing to that firm which ought to have come in has been postponed, owing to contracts which have been interrupted owing to the war conditions not being proceeded with as we anticipated. There are, of course, various other reasons. The turnover of the business lately, in view of our great activities, has been considerably larger, and therefore it is not astonishing that more capital has been required. I am glad to think that all this capital has been remuneratively employed. "Investments in other companies" remains at the same figure. "Contracts partly executed (including an estimate of profits to date, approved by the directors, less cash received on account) and sundry debtors," show a reduction from last year of £15,000, the figures of this year being £45,000, as against £58,000 last year. The usual deduction for depreciation has been made on office furniture, laboratory fittings, &c., and the cash in hand and at bankers this year is £1,300, compared with £3,800 last year—slightly smaller. Turning to the liabilities side of the balance sheet, there is no alteration in the share capital. Our sundry creditors were £27,000 last year, and they are £21,000 this year, showing a reduction of £6,000. Our secured loans from bankers were £3,000 last year, and they are £26,000 this year, showing an increase of £23,000. The reserve fund account now stands at £14,000, against £10,000 last year, owing to the sum which you placed to it from your last year's profits. Regarding the profit and loss account, we brought forward £7,400 from last account, and we made during the year a profit of £20,743. The carry-forward the year before was £3,500, and made a profit of £24,000. Your profits would have remained practically the same as they were for the year before, but owing to the larger carry-forward the total shows £28,000, against £24,000.

As regards the report, I have already stated in my opening remarks that we have recovered from the slump which took place during the first few months of the financial year, and we are now extremely busy night and day on a large amount of engineering work. In view of our profits, the board decided that it would only be fair to the shareholders to somewhat slightly increase our dividend, and we are in a position to pay a dividend of 6 per cent. per annum on the Ordinary shares, less income-tax, which is the largest we have paid for several years. We are asking you to place to reserve the same amount as last year—the maximum amount we are entitled to put to reserve according to our articles—namely, £4,140—which will bring your reserve fund up to the substantial figure of over £18,000. We are also increasing the carry-forward from £7,400 last year to £9,100 this time, so that the Company is left in a very sound position.

The Prospects.

As far as the future is concerned, of course it is extremely difficult for anyone at present to hazard any conjectures on the subject. All one can say is that we are very well employed, and there appears every prospect of our keeping our works well employed for some time on contracts which are reasonably remunerative. How much of the profits of these contracts in the future anyone will be allowed to keep is, of course, a question on which we cannot offer any opinion, but as far as I am advised it does not appear that we are liable so far to any excess profits tax under the last Budget. I state that because I see that that question was raised in a financial paper which analysed our balance sheet.

ASHANTI GOLDFIELDS CORPORATION, LIMITED.

The eighteenth ordinary general meeting was held on December 16 at Holborn Restaurant, W.C., the Earl of Bessborough, K.P. (Chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: There are no points of special interest to draw your attention to in the balance sheet, except that I should like to emphasise the strength of our position. Our liquid assets at June 30 last—namely, cash, book debts, and stores—were £178,724; our liabilities amounted to £66,029. We had, therefore, a surplus of liquid assets over liabilities of £112,695. Deducting the dividend declared in July last, there remained a surplus of nearly £60,000, which can legitimately be termed "working capital," as it represented cash in hand here and stores on the mines.

The Year's Profit.

Our income for the year is £4,851 more; the working costs, and charges for royalty, development, depreciation, &c., are £9,073 less than in the previous year. This reduction was effected, although we mined and treated 13,369 more tons and, to some extent, had to bear the increased cost of stores, freight, and insurance, due to the war conditions ruling for 11 months of the financial year now under review. The net result of the year's working, notwithstanding, is shown in an increased profit of £13,924. During the year we paid dividends amounting to 2*s.* 9*d.* per 4*s.* share, absorbing £151,670, and we carry forward to the credit of the current financial year about £8,000 more than was brought into the profit and loss account. In our operations it may be noted that the grade of ore mined agrees very closely with the average shown in the previous ore reserve statement. A drop in yield per ton, as compared with last year, was made up by the treatment of a larger tonnage at a total cost which was lower by 4*s.* 11*d.* per ton; the respective figures of net profit per ton of ore treated being 24*s.* 4*d.* in 1914 and from the lower grade ore in 1915 [illegible]

Improved Ore Reserve Position.

It is, I am sure, a source of great satisfaction to us all that the ore reserve position has again improved very substantially. In point of tonnage the increase is only an insignificant one, but with the increased proportion of Obuasi ore included in the general reserve and a rise of 2 dwt. in the general grade, the gross value of the visible ore shows an increase of £189,000. The profit value of the ore reserve at £829,700 makes the best showing since the year 1909, which was a record in this respect. This excellent position is attributable to the continuance of good values in the Obuasi chute down to the lowest developed levels of the mine—namely, Nos. 14 and 15. It has been possible during the past twelve months further to systematise the work of ore extraction, so that the grade of ore taken out has not exceeded the general average of the mines. As a consequence, the full benefit of the active work of development has made itself felt, and is reflected in the ore reserves. As I have already mentioned, the substantially increased profit values in the ore reserve are contained in, for practical purposes, the same number of tons of ore as the smaller values were held in last year. If the monthly tonnage to be crushed depended on the capacity of the reduction plant, it would therefore appear as if we should necessarily produce a considerably larger output in the future than in the past. But, as explained in the technical report, the chief limiting factor as regards monthly output is the problem of mining a maximum amount of average grade ore in the heavy and dangerous ground in Obuasi chute while still keeping the stopes secure and in good order. It was with this difficulty in view that it was not considered safe, at the time of the Consulting Engineer's inspection, to base a programme of monthly output on an increased tonnage from Obuasi. On the other hand, he was of opinion there was the possibility that, with improved conditions, particularly in the way of better ventilation, it would be found practicable not only to meet the falling off in revenue from Ayeinm, Old Chief, and other outside sources, but actually to increase the monthly output.

The Outlook.

Apart from the effect of the War in further increasing the prices of supplies over those of last year, there is no reason to anticipate that the current year will show any material increase in costs. As to the effect of War prices, it may perhaps be of interest if I give you a rough forecast of how far we may be affected in the next few months—it is, of course, impossible to look far ahead. For instance, insurance on bullion will probably cost about £5,000, War bonus to white staff about £1,900, and rail freight about £1,600 more than last year; there is also the prospect of an increase in price on all engineering stores and supplies generally. We may have to pay something by way of excess profits tax, but cannot say definitely until the details of the Finance Act are finally settled. It is, however, difficult to see how such a tax can be justified in the case of gold mines. So far as this Corporation is concerned, we consider it is contributing a very full share. We pay in royalty over £22,000, and in ordinary income tax, at the present rate, another £22,000. Furthermore, all our gold comes to England, and out of the proceeds we have to provide about £11,000 per month for wages, &c., which have to be paid in silver—the currency of the Colony.

IND COOPE AND CO., LIMITED.

THE ordinary general meeting was held on December 16 at 65 Aldersgate Street, E.C., Mr. Louis E. Walker (Chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said : Although this is the third year of the present Company's trading, it has not been found possible to issue the Ordinary shares, owing to the fact that the Chancery proceedings are not yet completed. Taking the item in the balance sheet of sundry creditors, it will be noticed that this shows a large increase over last year, due in the first place to the increased beer duty and the extra month's credit allowed for payment of duty by the Government—this accounts for the larger proportion of the increase—and, secondly, to the fact that the Company hold larger stocks of materials than in the previous year. I will now ask the meeting to consider the profit and loss account. The trading profit shows an increase of £33,860; interest on loans to customers, &c., shows an increase of £1,557—or a total increase of £35,417. Out of this has to be provided (1) depreciation, in which item there is an increase of £5,858. In the 1914 balance sheet underwriting commission, £40,000, appears as an asset, and we are bound legally to show it separately. Although perhaps the writing off of the entire amount in one year may be considered a drastic proceeding, the directors felt it was justifiable. The balance carried forward is slightly higher at £21,973. During the past year we have paid into the Imperial Exchequer no less a sum than £486,926, which represents beer duty, licence duties, &c.; but had the increased duty been chargeable for the full twelve months the amount would have been considerably higher. On the top of this heavy taxation we have now to contend with restrictions, in various localities, which have been placed upon our trade. I should like to mention as regards these restrictions that the trade has offered no opposition to them. With regard to the outlook, it is full of ominous signs. The prices of materials and every article a brewery has to purchase have increased by leaps and bounds, and it is impossible to anticipate during this current year, whether the War continues or not, any great prosperity; in fact, the stockholders must not feel disappointed if the trading results fall short of what they have been.

Mr. H. W. E. Storey seconded the motion, which was adopted unanimously.

CHAMPION REEF GOLD MINING COMPANY OF INDIA, LIMITED.

THE twenty-seventh ordinary general meeting was held on December 16 at the Cannon Street Hotel, E.C., Mr. John Taylor, M.Inst.C.E., Chairman of the Company, presiding.

The Chairman, in moving the adoption of the reports and accounts, said : The results of the past year's operations are undoubtedly very satisfactory, showing as they do increases in the profit and dividend and in the reserve of ore in the mine. The increased profit is due not to a larger output of ore, but partly to the higher value of the quartz coming from the current development points in Glen section of the mine, and partly to the improvement in the method of extraction of the gold following upon the installation of the tube mill and classification plant referred to in our previous report as having just come into operation. A total of 129,161 oz. of fine gold was produced, of the net value of £545,338. The royalty payable to the Mysore Government, amounting to £30,693, is deducted, leaving a net revenue from the gold of £514,645. Other receipts bring the total revenue up to £520,178. Deducting the working expenses, as shown in the income and expenditure account, amounting to £310,070, a profit for the year of £210,108 results. This is £8,474 greater than for the previous twelve months, and would have been still larger had it not been for some exceptional circumstances, leading to an increase in the costs equivalent to almost 1*s.* 6*d.* per ton treated. With the additions of dividends on the power-station shares and balance brought into the account from the previous year, the total at credit of profit and loss account is brought up to £215,337. Out of this sum the interim dividends have been paid, and various items set out in the profit and loss account have been debited. You will have seen that the sum of £15,000 has again been transferred to the reserve fund, bringing it up to £75,000, and £1,500 has been added to the insurance and contingency fund, making that fund now £3,520. The debit to buildings, machinery and plant amounted to £18,269. We have written £15,000 off to that account, which has also been credited with sales of machinery to the value of £3,583. The sum of £19,009 spent during the year on Gifford shaft has also been written off, and thus, as you will see, the whole of the expenditure for the twelve months on capital account has been replaced, and the financial position remains very satisfactory. Then, £40,000 of the Company's resources have been invested in the 4½% War Loan; £20,000 of this represents the conversion of the previous issue of 3½% stock. The balance of profit at September 30 amounted to £75,251, and we now recommend the payment of the final dividend for the year of 8*d.* per share, amounting to £69,333, leaving a balance to carry forward of £5,898, which should cover the royalty and percentage on the dividend and our estimated liability for excess profits tax. Now, as to the mine, the reserves of ore which have been added to during the past twelve months, and are estimated at 495,015 tons, are the largest we have yet opened up, and it is evident that the development work of the year has revealed a large quantity of profitable ore. Quite at the end of our financial year, now under review, values in the deepest points in Glen section (where many successive levels have opened up a very fine shoot of ore) began to decline, and Mr. Gifford evidently considers it is not unlikely that the low-grade zone encountered in Carmichael's and Garland's sections may extend through the Glen ore shoot, and that it would be prudent to lower the scale of the monthly returns of gold to some extent. This reduction has already been commenced, the returns for October and November being respectively 10,684 and 10,366 oz. of fine gold, as compared with 11,082 for September and a monthly average for the year of 10,763 oz. It may be noted, however, that the returns for October and November were practically the same as those for the corresponding months of 1914, showing a reduction of only 14 oz. of gold. It will be readily understood that in the case of quartz reef mines it is not possible for anyone to say with certainty what will happen in the future, and in expressing an opinion we can only be guided by what has taken place, in other instances, of a similar change in the condition or value of the vein. Fluctuations in value constantly occur in gold mines of this character, and it may be that we have now to face a leaner period as regards results; but long experience of all the important mines of the Kolar goldfield, and of the many changes which have been noticeable from time to time in the different workings, strengthens me in the belief that if a falling-off does take place it will be only temporary and that an improvement may again be confidently anticipated. We are in an excellent position in respect to finance and mine equipment, as also as to our reserves of ore, for the vigorous prosecution of the development works.

Sir J. D. Rees, K.C.I.E., C.V.O., M.P., seconded the resolution, which was carried.

THE CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

THE third annual general meeting of this Company was held at Winchester House, Old Broad Street, E.C., on December 17, Mr. W. F. Turner presiding.

The Secretary (Mr. Alfred W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said : Gentlemen,—My first duty is to refer to the paragraph in the report on the death of our late Chairman, General Albert Thys, which expresses very inadequately our deep regret and our sense of the invaluable services rendered by him to this Company and its predecessor. General Thys died in Brussels on February 10 last. He became Chairman of the original Chinese Engineering and Mining Company in the month of June 1901, and had consequently occupied that position for about 14 years. He was largely instrumental in the formation of the original Company; he rendered the most valuable services in the formation of that Company and in the troublous times through which it passed, as well as in the reconstitution of the Company which took place over three years ago. Perhaps no man could have been better fitted for the position which he occupied. He brought a vigorous personality and keen interest to the consideration of the Company's affairs, and it is a matter of satisfaction to us who were his colleagues that he lived to see this Company established on what we believe is a thoroughly sound basis and in a satisfactory and flourishing condition. His death was the more sad in view of the unhappy situation of Belgium at the time. He was an ardent patriot, and in him his native country lost one of its most valuable and distinguished men. We wish again to express our deep sense of his loss and our sympathy with his bereaved family.

The Profit and Loss Account.

A year ago we told you that the sales for the current year, the one which is dealt with in the report and accounts before you, showed a satisfactory increase over those for the corresponding period of the preceding year. The increase for the whole year amounted to 281,000 tons, and there was a substantial increase in the divisible net profit of the Kailan Mining Administration. There was, however, a fall in the average rate of exchange from about 1*s.* 10½*d.* to 1*s.* 7*d.* per dollar, which has had the result of slightly reducing our proportion of the net profit in China. You will see from the credit side of the profit and loss account that that proportion is, in round figures, £156,000; that is about £9,000 less than the previous year. In addition there is interest in China, less some small expenses, amounting to £5,323, which makes a total China credit of £161,428. Interest in Europe amounted to £6,024; this is a considerable increase on the previous year, due to the fact of our having larger funds and to higher rates of interest. The agency fee, £4,000, is unaltered, and minor receipts amount to about £89, making a total to the credit of the profit and

loss account of £171,542. On the other side you have London expenses, which are practically the same. Brussels expenses are a few hundred pounds less, but this is due to the fact that owing to the cutting off of communication with Belgium we have not received the accounts of our Brussels office beyond May 31 last, so that the expenses shown are those for only eleven months of the year. The directors' remuneration is in accordance with the special resolution which was passed at the annual meeting of last year, the odd figure of £27 18*s.* 11*d.* representing the remuneration for the four days from June 27 to June 30, 1914. Then follows the auditors' fees, £230. Subscriptions to relief funds amount to £1,876. We told you at the last general meeting that the board had felt it their duty to vote a sum of one thousand guineas to the Prince of Wales' National Relief Fund, £250 to the British Red Cross Fund, and £200 to the Belgian Relief Fund, making £1,500 in all. In addition to this, our Brussels office has made a monthly contribution to the Comité Central de Secours et d'Alimentation in Brussels, which for the year amounted to £376 19*s.* 7*d.* These payments, I am sure, will meet with the full approval of the shareholders.

Net Profit.

The balance carried to the balance sheet is £159,067, as compared with £155,659 a year ago. The net profit is, therefore, £3,408 larger than the year before. This is explained mainly by the fact that, whilst our proportion of the profit in China is somewhat smaller, we have no provision to make this year in respect of preliminary expenses, inasmuch as the balance of that account—viz., £11,914—was written off last year. The balance brought forward from July 1, 1914, was £52,268. Adding the profit I have just mentioned makes a total of £211,335. We paid an interim dividend of 5% on May 15 last, which required £50,000. Income tax to June 30, 1915, amounts to £12,176. Deducting these there remains a disposable balance of £149,159. Out of this we propose to declare a further dividend of 5% free of income tax, making a total of 10% for the year, which will leave £99,159 to be carried forward to next year. This balance is subject to any claim that there may be in respect of the Excess Profits Tax, which is the subject of the Bill now before Parliament, and which will, I suppose, become law in the course of the next few days.

The Balance Sheet.

The balance sheet presents some interesting features. The total due to creditors is £101,773, as against £35,347 in the preceding year. The whole of this increase is in respect of our outstanding dividend and debenture interest coupons and Debentures drawn for redemption up to December 31, 1914, the explanation being that owing to the occupation of Belgium and of a portion of North-Eastern France by the enemy the coupons and bonds have not come forward for payment. These figures will necessarily continue to increase until the end of the war. The next item is the half-year's Debenture interest accruing to June 30 last, £34,560. This is £720 less than in the preceding year, owing to the annual redemption of the sum of £24,000, which is shown in the next item. The 6% Kailan bonds outstanding at June 30 last amounted to £1,152,000, a reduction of £24,000, the amount of the annual drawing. The next item is Redemption of Debentures Reserve Account, £60,000, being an increase of the £24,000 of Debentures drawn during the year. The share capital, of course, is unchanged at £1,000,000, the total of the balance sheet being £2,497,492.

Cash and Investments.

On the other side you have cash at banks in London and in transit, £140,829, nearly the whole of which was on deposit. Then you have Treasury bills for £100,000 at cost, plus interest, to June 30, amounting to £98,584. I might say here that we subscribed for £50,000 of the War Loan which was issued in July last. The next item is cash at bankers and in hand at Brussels on May 31, 1915, £68,842. I have already mentioned that, owing to the absence of communication, we have not received any accounts from our Brussels Office since May 31 last. We told you at the general meeting last year what the position then was; in consequence of the German occupation, a Commissioner had been appointed by the German Government at each of the banks in Brussels, and transactions were confined in our case to making payments to the families or representatives in Belgium of our Belgian employees at the mines in China, otherwise the Company could not draw upon the amounts standing to its credit with its bankers. This position continued until the month of August last. We have received information that on August 6 our Brussels office was sequestrated by the German Government and a Commissioner was appointed; the amounts standing to the credit of the Company with its bankers were taken possession of and sent to the Caisse de Consignation, Berlin. The requisite steps have been taken to register the Company's claim in the Foreign Claims Department of the Foreign Office. There the matter will remain until the conclusion of the War. The next item is debtors, £57,374, which consists mainly of current accounts with the Kailan Mining Administration. The next item, Property, Rights and Undertaking, £1,340,660, shows a variation of some few hundred pounds due to slight adjustments which have been made during the year. The working capital account stands at £84,726, having been increased by the sum of £1,725, the annual amount written off from the expenses in connection with the issue of Kailan bonds. The next item, £63,928, for stores taken over by the Kailan Mining Administration, is the same figure as last year. The loan account to the Kailan Mining Administration, £60,000, is also the same as last year, whilst the value of the shares held in China, £409, is also unchanged. The last item, Expenses of Underwriting and Issue of Kailan Bonds, £81,937, is after writing off the £1,725 which I have already mentioned. This makes the total of the assets side of the balance sheet £2,497,492.

Increased Sales of Coal.

As regards the working of the past year, I cannot do better than quote a passage from the General Manager's report. He says:

"It was intended at the beginning of the financial year to work all the mines at full bore every possible day throughout the year to satisfy existing demands and to make provision for a very large anticipated increase in sales compared with the previous year. In August 1914, however, the War in Europe broke out, and, in view of the uncertainty of the future, and more especially of the effect the War might have on the administration's sales of coal and the general financial situation, all possible expenditure, both capital and revenue, was cut down to the lowest possible minimum at all places."

The sales of coal for the year amounted to 2,692,382 tons, as against 2,411,038 tons in the preceding year. The average daily production of the mines has gone up from 7,318 tons in 1913-14 to 9,165 tons in 1914-15, the daily output on several occasions in the latter year reaching a figure well over 10,000 tons.

Coal in Sight, 16,430,000 Tons.

Development work at the mines proceeded actively, and at the end of the financial year the coal in sight at all the mines is given at 16,430,000 tons, an increase during the year of nearly two million tons. In addition to this, prospecting work has shown that at the Tang-Chia-Chwang Mine there is something like 15,000,000 tons of coal available. The object of the prospecting operations there having been attained, they have now been discontinued.

The Working of the Current Year.

As regards the working for the current year, the sales, as is stated in the report, so far as the year has gone, have been maintained. The General Manager writes that:

"It is not easy to make any accurate forecast of the amount of coal to be produced during the present financial year, but it may be safe to assume, under the present political conditions, that it will not exceed that of the past year, and that the cost of production will be about the same. The mines will be in a position to cope with a demand of over three-and-a-half million tons per annum, after the increase of power has been effected, a work which requires urgently carrying out, even at the present figure of production.

"We have to face a large capital expenditure in this respect during the present financial year, but after completion of the additional requirements the mines will all be in an absolutely safe position as regards the ever-increasing trouble of water."

Power Plant.

The orders for the power plant, to which reference was made at the last general meeting, were placed in the spring of this year. Shipments have now begun, and it is expected that the whole plant will be installed and in operation before the end of the year 1916, and we shall then have abundant power at the mines for all purposes.

Coal Consumption in China.

Speaking on the general question of the consumption of coal in China, the General Manager states in an interesting paragraph that:—

"Generally speaking, the consumption of coal, more especially by the native industries, shows a continuing tendency to increase year by year, and coal as a commercial fuel is now being used in the far-off inland districts in much greater quantities than hitherto. This has been helped to no small extent by the increasing export of various products from North China to European markets. Native boats laden with export cargo, after discharging at sea ports, take back coal inland at very cheap rates of freight, and so distribution of coal becomes general all along the many waterways. There are no signs whatever of the former native fuel being reverted to, the native consumption of coal has come to stay, and will probably continue to increase."

Prospects.

Concluding his report, the General Manager says :—

"It is difficult indeed to make any forecast for the present financial year. I have every hope that our sales may be kept up to the same figure as last year; in fact, at the time of writing there are signs of this figure being slightly increased. Profits will be dependent very largely on the rates for chartering tonnage for overseas markets, but with increased prices in certain ports I trust that the figures of the past year will not be reduced to any appreciable extent, if at all."

Considering the excellent results which have been obtained during the past year, which included eleven months of the War period, we think that the prospect which is held out to us of being able to achieve approximately similar results in the year now current should be regarded as entirely satisfactory. I now move "That the directors' report and accounts at June 30, 1915, be and they are hereby received and adopted, and that a final dividend be declared of 5%, making 10% for the year, free of income tax, payable on December 21, 1915."

Mr. Edmund Davis seconded the motion, which was carried unanimously.

On the motion of Mr. Gildersleeve, seconded by Mr. Caro, the auditors (Messrs. Annan, Dexter & Co.) were reappointed, and the proceedings terminated.

A. DARRACQ AND COMPANY (1905), LIMITED.

THE tenth annual ordinary general meeting was held on December 17 at Salisbury House, E.C., Mr. Norman Craig, K.C., M.P. (the Chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that during the whole of the period under review the European war had been in progress, and to a very large extent it was true that for the time being their works had ceased to be a motor factory and had become a munitions factory. They had, however, been able to derive very sensible profits from completing chassis and cars at prices which plainly indicated the demand, even in time of war, for Darracq products and offered the happiest augury for the future. It would not be prudent to enter into any detail as to the projects of the board for the future, except to say that their policy had been, and would be, to render all service possible, consistently with the shareholders' interests, to the British and Allied Governments during the period of the War, and to be in a complete state of preparedness to resume as speedily as possible the normal functions of the Company as soon as peace might come.

Financial Position Strengthened.

Since the incorporation of the Company its financial position had been strengthened to the extent of £385,400, either by the extinction of Debentures or by the reduction of the item of goodwill. He proceeded to explain the circumstances which had led up to the formation of a French company to take over the works at Suresnes, in which A. Darracq & Co. held almost the whole of the capital, and stated that that undertaking had the most gratifying prospects. Shareholders would ask for no greater reassurance as to the wisdom of the action taken if they knew the extraordinary enthusiasm with which their own workmen had sought to secure holdings in the new company. With regard to the investments, he stated a year ago that the directors had made a purchase of Debentures in Argylls, Limited, at a price which would produce one of two results—viz., the acquisition at a reasonable figure of a British factory, of which they stood in need, or the securing of a nice profit to the Company. The latter alternative occurred, but when they last met the profit had not been received, and so was not included in the accounts. These Debentures had now been paid off, and a sum of upwards of £25,000 appeared in the accounts as the profit over this deal. During the year the Company's mortgage on the A.L.F.A. property in Milan had been paid off in full, and their holding in the share capital of that company had been realised at the full price at which it stood in their books. A very satisfactory sale had, since the end of the financial year, also been effected of the Company's Amsterdam property. The Company's investments appeared in the balance sheet at cost. They consisted almost exclusively of Government and trustee securities, and although the depreciation consequent upon the War might have been regarded as temporary the directors had preferred to be in a position to say that the investment figures, in the same way as in regard to all other figures in the accounts, accurately reflected the existing position. They had, therefore, transferred from profit and loss account a sum of £20,000 as a special depreciation reserve, with the result that the investments were in substance written down to current market prices. They had also increased their general reserve fund by £50,000, which was represented in the accounts by their investment in the 4½% Government War Loan.

The Dividend.

The directors proposed, after making the transfers to reserves to which he had referred, and proper allowance for depreciation of plant, to pay a dividend of 9½% on the Ordinary shares, carrying forward £17,144. There were critics who would prefer to see a larger dividend paid and less provision made for the future, and these critics might argue that in reserves or depreciation the directors had diverted over £100,000 from the profit of the year. He wished, however, to point out that under its present management the Company would be conducted for the investing holder, and not for the holder of the moment. The investor was not injured by conservative finance; and the speculator did not interest them. A further consideration was that they must walk warily in the matter of the distribution of dividends. They were in an exceptional position—that of a British Company operating mainly in France. The question of taxation might, therefore, prove acute, and they must make their dispositions accordingly. A further burden, when they resumed their normal manufacturing functions, had to be considered—viz., the imposition of a duty of 33⅓% on imported cars and chassis. The directors had not been, apart from war conditions, oblivious to the fact that such a tax might, and probably would, be imposed, and it was in part to anticipate this event that a bid was made to secure works in the United Kingdom. As he had already stated, they had to content themselves with £25,000 in cash and did not get the works. They were, however, strongly of opinion that the Company should, as soon as opportunity offered, secure suitable British works, not only by reason of the imposition of this tariff, but also that they might meet, by such an extension of factory accommodation, the demand for Darracq cars. These reasons, however, convinced the board that it was in the best interests of the shareholders to show no recklessness in recommending dividends.

Mr. Almeric Paget, M.P., seconded the motion, which was carried unanimously.

DUNLOP RUBBER COMPANY, LIMITED.

THE ordinary general meeting was held on December 17, at 14 Regent Street, S.W., Mr. Arthur Du Cros, J.P., M.P. (Deputy-Chairman and Managing Director) presiding.

The Chairman said that the total net profit of the year, after deducting a sum of £133,000 in respect of interest on income stock, the parent Company's debentures, commissions, management expenses and depreciations, amounted to £435,000, from which had to be deducted the parent tyre royalty, amounting to £23,500, leaving a net balance of £411,000. That figure exceeded the profits of the previous year by £30,000, although the actual increased trading profit was really £37,000, because of a sum of £7,000 odd, included in the previous year, in respect of premiums on shares issued. The actual increase available for distribution was £61,000, the Company having had to provide a sum of £31,000 last year in connection with the expenses of new capital issues. In normal circumstances the results shown by the balance sheet would have been considerably better. Many exceptional charges had arisen directly out of the War, and had had to be disposed of out of the profits. The directors had not hesitated to deal drastically with those charges, believing that these were times when a cautious and conservative policy of finance was very necessary.

How the Record Results were Obtained.

The shareholders, he was sure, would learn with satisfaction that the record results of the year had not been obtained by taking advantage of the War to squeeze out higher prices. As a matter of fact, the prices of the Dunlop commodities had actually been reduced in the case of cycle tyres to users and consumers alike, and with regard to motor tyres sold to the Government they had been reduced over and beyond the reduction to other customers. In comparing the profits made with those of the previous year, it was important to remember that the Company had worked under the gravest possible disadvantages. Wages and salaries had been considerably higher; freights, fuel, and raw material had all been higher too, and difficulties and delays had been experienced in transport, which continued to this moment. As a matter of fact, they had at the present time large accumulations of manufactured goods in their factories, which the railway companies were unable to take and deliver. The constant labour changes referred to in the report had also been the cause of the utmost delay, confusion, and difficulty in the works. In the circumstances it was a matter of great congratulation that the improved profits were not due to artificially high prices, but to the soundest of all business reasons, namely (1) increased output and sales in conjunction with a high standard of manufacture, and (2) reduced costs, the result of improved organisation and expenditure of capital on improved processes. The Dunlop manufactures held a higher reputation now than ever before in all departments. He could speak particularly of a great advance in the results obtained from their solid tyres. They had ample opportunities for measuring and comparing the results. The Dunlop solid tyres were sold on a mileage basis, and covered nearly 300,000,000 of miles during the year, and the results showed steady improvement month by month.

The Dividends.

Of the profits available for distribution it was proposed to divide 45%, amounting to £194,000, the Preference shares taking £44,800 and the balance going to the Ordinary shares, if the recommendation of the directors of 15% for the year was accepted. The balance of £217,000 retained would be either carried forward or applied in reduction of plant and machinery, against £171,000 last year. If it were suggested that a higher dividend than that recommended should be paid, his reply was "In normal times, perhaps, 'Yes'; but not at this most critical period of the War." The object of the directors was to maintain the present rate of dividend as a minimum, not only during the War, but, if possible, during the lean years which might follow the War. The board were anxious not to adopt an increased dividend until they were practically certain of being able to maintain it. The weak spot of the balance sheet was the stock. In 1913 it was £894,000, and it was then stated that the amount must be increased. In 1914 there was a decrease to £824,000, and in 1915 a further decrease to £781,000. In the opinion of the board, the stock must be increased by £500,000. Their object was to accomplish this by the aid of the new works at the earliest possible moment, but, as the increase would be gradual, no difficulty would be experienced in financing it. The Debentures had been reduced by £117,000, and since August 31 last by an additional £13,000, leaving £104,000 to be redeemed on May 31 next. This item would have disappeared from the accounts next year, and with it a standing charge which took priority over dividends.

Active Demand for Solid Tyres.

The demand for solid motor tyres for traction purposes had been particularly active, and the supply had been proportionately curtailed. The use of motor transport by the Army was great, but this only partly accounted for the demand. There was also a very great demand at home for motor transport, owing to the great railway congestion which at present existed. Manufacturers were becoming more and more dependent on it for the handling of their raw and finished goods. The Company was, therefore, carrying out a service of great public utility, both abroad and at home, and it was very important in the national interest that there should be no interruption of output by labour or from any other unavoidable cause. The buildings which were being erected covered seven acres, and had been designed with a view to further extensions. No further extension would be made at their other rubber mills, nor indeed was it possible to do so. The new mill would be fitted with all the latest labour-saving devices, and would be up to date in every respect. When the mills were absorbed into the general business a most important and substantial addition to their profits would have been made. The directors attached more importance, however, to the undoubted fact that a decided advance would have been made in the quality and durability of Dunlop tyres, and it was in this direction principally that they hoped to reap the reward of their initiative.

The Company's Rubber Estates.

The increase in their interest in the rubber estates of £82,000 was mainly accounted for by the purchase of 1,887 additional acres of planted rubber. The Company, in the process of acquiring those properties, had taken over some four or five companies. These companies had now all been amalgamated into one company—namely, Dunlop Plantations, Limited. The capital of that Company was £300,000 in shares and £271,000 in Debentures, all of which were owned by their Company. Dunlop Plantations, Limited, possessed over 18,000 acres of land, of which 10,547 were planted in rubber up to August 31, and since that date an additional 422 acres had been planted, bringing the total to just 11,000 acres. The capital value of the 10,547 planted acres was £54 per acre, after setting on one side and valuing at nothing at all the other assets, which had an approximate value of £42,000. They were the third largest rubber planters in Europe, and the proceeds of the rubber sold from the estates now far exceeded the amount required for their upkeep, and the undertaking was earning substantial profits, especially as the market price of the commodity had risen by 50% within the past few weeks. The investments in the associated companies had decreased by £85,000, the difference representing a portion of losses on the Continent arising directly out of the War. As a set-off against that reduction, it would be noticed that £160,000 of profit had been retained in the associated companies during the past two years, and that no appreciation was made on that account. The position of their associated companies was becoming infinitely stronger every year. The export trade of the Company had become very important, and could be doubled if the mills could produce and the Government would grant the facilities. As a matter of fact, during the past two years their foreign business had been starved for supplies. The shareholders would, therefore, understand that these investments and the rubber estates were a source of great strength and great value to the Company, and although their value had been increasing from year to year, partly by the retention of profits, but principally by the extension of trade, no appreciation of value had on that account been made in their balance sheet, nor was it proposed to do so. With regard to the fourth and last item of investments there was an increase on balance of £12,000. He had no comment to make upon that except that it included an investment of £25,000 in French Treasury bills. They saw their way quite clearly on finance under existing conditions so far as they were known to the directors, and there was no present necessity for or any intention of issuing fresh capital. The proposal to take powers to issue a further 200,000 Preference shares was merely formal, and was entirely in the nature of a precaution. The figures of the balance sheet showed for themselves that the finances of the Company were perfectly sound. The Chairman concluded by moving the adoption of the report and accounts.

The Right Hon. the Earl of Albemarle, K.C.V.O., C.B., A.D.C., seconded the motion, which was carried unanimously.

An extraordinary general meeting was then held, and resolutions authorising an increase of the capital to £2,000,000 by the creation of 200,000 Preference shares of £1 each, and the issue of the said 200,000 Preference shares at such time as the directors might think fit, were agreed to.

A hearty vote of thanks having been accorded to the Chairman, directors, managers, and staff, the meeting terminated.

PARENT TYRE COMPANY.

An ordinary general meeting of the shareholders was held yesterday at the offices, 14 Regent Street, S.W., Mr. Arthur du Cros, J.P., M.P., presiding.

The Chairman said the net profit of the year of £124,300, including the amount brought forward, was less than that of the previous year by £15,000, accounted for as follows: The amount brought forward from last year was £5,000 less than from the previous year; the dividend received from the Dunlop Rubber Company, although at the same rate as last year, was £5,000 less, owing to the increased income tax deducted; transfer fees and other income were £2,300 less, and management expenses had increased by £2,300, the royalty received from the Dunlop Rubber Company being £700 more than last year. A very slight increase of dividend from the Dunlop Rubber Company (1¼% would be sufficient) would make good the deficit, with the advantage that once such an increase was made it was more than likely to be maintained. He was not taking a possible increase of royalty into consideration. The Ordinary shareholders would no doubt be pleased to know that it was the intention of the directors, all being well, to resume the payment of interim dividends on the Ordinary shares.

The resolution was seconded and carried.

Alldays and Onions' Pneumatic Engineering Company.—Dividend of 5 per cent. and a bonus of 5 per cent., making 10 per cent. for the year.

Arnold J. Van den Bergh.—Dividend of 5 per cent. and bonus of 2½ per cent. on Ordinary, making 12½ per cent. for year.

Bambrakelly (Ceylon) Tea and Rubber Company.—Interim dividend, less tax, of 6 per cent. (actual).

Bartholomay Brewing Company.—Dividend of 6s. per share on Ordinary, less tax.

Bayliss, Jones and Bayliss.—Dividend at 10 per cent. on Ordinary for year.

Bogawantalawa District Tea Company.—Interim dividend of 4 per cent. on Ordinary, less tax.

Boots Cash Chemists (Eastern).—Quarterly dividend at rate of 10 per cent. per annum, tax free, on Ordinary.

British Assam Tea Company.—Interim dividend of 5 per cent., less tax.

British Steamship Investment Trust.—Interim dividend of 10 per cent. on Deferred stock, less tax.

Bristol Wagon and Carriage Works.—Interim dividend at rate of 4 per cent. per annum, less tax, on Ordinary.

Brooke Bond and Company.—Interim dividend at rate of 10 per cent. per annum, less tax, on Ordinary.

Canadian General Electric Company.—Quarterly dividend of 1¾ per cent. on Common stock.

Clerical, Medical and General Life Assurance Society.—Dividend for half-year of 9s. per share, tax free.

Commonwealth Bank of Australia.—A branch has been opened at Bendigo, in the State of Victoria.

Cuban Telephone Company.—On and after January 1, 1916, and until further notice, interest coupons on the First Mortgage bonds of the Cuban Telephone Company will be paid on presentation at the banking house of Morgan, Grenfell and Company, London, England, or at the banking house of J. P. Morgan and Company, New York City, New York.

Dejoo Tea Company.—Interim dividend of 4 per cent., less tax.

Newcastle Breweries.—Dividend at the rate of 15 per cent. per annum on Ordinary, making 10 per cent. for the year.

RAND GOLD OUTPUT.

(a) "Operations were interfered with by heavy rains; conditions are now normal."

Dividends—1912, 7½ per cent. 1913, 15 per cent. 1914, May, 7½; Sept., 6¼ per cent. 1915, May 6¼ per cent.

MISCELLANEOUS

East India and Ceylon Tea Company.—Interim dividend of 5 per cent., less tax.

Forestal Land, Timber, and Railways Company.—Interim dividend of 6 per cent., less tax, on Ordinary.

Furness, Withy and Company.—We understand that Messrs. Furness, Withy and Company, Limited, who already have a very large interest in the Johnston Line, Limited, have acquired the shares held by the Johnston family, and will assume entire proprietorship on January 1 next owing to the retirement of Mr. William and Mr. Edmund Johnston at that date.

Highlands and Lowlands Para Rubber Company.—Third interim dividend of 5 per cent., less tax.

Hope Tea Company.—Interim dividend of 10 per cent. on Ordinary, less tax.

Imperial Tea Company.—Interim dividend of 2½ per cent., less tax.

Jetinga Valley Tea Company.—Interim dividend of 5 per cent., tax free, on Ordinary.

Jorehaut Tea Company.—Interim dividend of 5 per cent., tax free.

Kayser, Ellison and Company.—Interim dividend on Ordinary shares at rate of 5*s.* per share, tax free.

Kong Lee (Perak) Plantation Company.—Dividend of 3 per cent.

Lautaro Nitrate Company.—Interim dividend of 4*s.* per share, tax free.

Limbuguri Tea Company.—Interim dividend of 5 per cent., less tax.

Lobitos Oilfields.—Interim dividend of 5 per cent., less tax.

Marconi International Marine Communication Company.—Interim dividend of 5 per cent., less tax.

Marconi's Wireless Telegraph Company.—Interim dividend of 5 per cent. on Ordinary, less tax.

Meenglas Tea Company.—Interim dividend of 7 per cent. on Ordinary, less tax.

National Bank of New Zealand.—Interim dividend at rate of 12 per cent. per annum.

North British Cold Storage and Ice.—Interim dividend at rate of 6 per cent. per annum, less tax, on Ordinary.

Northampton Brewery.—Dividend of 5 per cent., less tax, on Ordinary for the year.

Ogilvie Flour Mills Company.—Quarterly dividend of 2 per cent. on Common stock.

Pataling Rubber Estates.—Interim dividend, less tax, of 50 per cent. (actual) in respect of 1915.

Royal Brewery, Brentford.—Interim dividend of 3 per cent. on Ordinary.

"Shell" Transport and Trading Company.—Interim dividend of 10 per cent., tax free. The directors state that they have every reason to anticipate, when the completed accounts for 1915 are presented, that the results realised will not be inferior to those of the previous year. This result has been attained notwithstanding the fact that the business has been carried out during the current year under circumstances of extreme difficulty. The Company and its British associates have placed their transport and other resources of all kinds at the disposal of the British and Allied Governments, and the services thus rendered have been cordially acknowledged by the numerous Departments thus served. Owing very largely to the extension of areas operated by the Company in various parts of the world the prospects continue to be satisfactory.

Spiers and Pond announce that the Transfer Books will be closed from the 14th to 31st inst., inclusive, for the Five-per Cent. First Mortgage Debentures, and the "A," "B," "C," and "D" Debenture stocks of the Company.

Straits Rubber Company.—Interim dividend of 10 per cent. (actual), less tax.

Taiping Rubber Plantations.—Final dividend of 9½ per sent., less tax, making 12½ per cent. for the year.

Tamplin and Son's Brewery, Brighton.—Interim dividend of 3 per cent. less tax, on Ordinary.

United Fruit Company.—Dividend of $2 per share on Common stock.

United Indigo and Chemical Company.—Interim dividend of 5 per cent. per annum on Ordinary shares, less tax.

Waterlow and Sons.—Dividend of 10 per cent. and bonus of 2 per cent., tax free, on Deferred Ordinary, making 17 per cent. for the year.

LIVERPOOL COURIER

The newspaper of the business man of Lancashire and Cheshire. No business house of any standing is without it.

The organ of the wealthy classes of the North-Western Counties and of North Wales. Its influence is wide and far reaching.

It is the **best provincial medium for all classes of financial advertising.** Investors in a wide area can only be thoroughly reached through its columns.

An application to the London Manager, 187 Fleet Street, E.C., will bring details of Charges. Private wire to Liverpool is open day and night.

LONDON OFFICES { 6 PRINCES STREET, E.C. 26 HAYMARKET, S.W.

EAST RAND PROPRIETARY MINES, LIMITED.

(Incorporated in the Transvaal.)

REVISED NOTICE.—DIVIDEND No. 21.

NOTICE IS HEREBY GIVEN that a Dividend of 5 per cent. (i.e., 1s. per Share) has been declared by the Board of Directors for the half-year ended 31st December, 1915, payable to all shareholders registered in the books of the Company at the close of business on the 31st December, 1915, and to holders of Coupon No. 21 attached to Share Warrants to Bearer.

The reduction of the half-yearly dividend to 5 per cent. has been decided on owing to increased gold realisation charges, which equal about 1½ per cent. of dividend, and to the larger amount of stores—approximately £64,000—required to be kept on hand to meet any possible contingencies. Further, the full quota of Debentures due for repayment on 1st March next has been provided for, as well as £15,000 on account of the following year. The proposed dividend leaves the finances of the Company in a satisfactory condition.

The Transfer Registers will be Closed from the 1st January to the 7th January, 1916, both days inclusive.

It is intended to post the warrants in payment of this Dividend on or about the 3rd February, 1916, but irregularity in the mail service may render it necessary to defer the posting by one or even possibly two weeks.

Coupon No. 21 attached to Share Warrants will be payable on or after the 4th of February, 1916, at the London Transfer Agency of the Company, and at the Crédit Mobilier Français, 30 and 32 Rue Taitbout, Paris. Coupons must be deposited four clear days for examination.

Coupons and Dividend Warrants paid by the London Transfer Agency to shareholders resident in the United Kingdom will be subject to deduction of 3s. 7½d. in the £ on account of English income tax.

Coupons and Dividend Warrants paid by the London Transfer Agency to Shareholders resident in France, and Coupons paid by the Crédit Mobilier Français, Paris, will be subject to a deduction on account of French income tax and the French transfer duty.

By Order,
HERBERT T. HAYWARD, London Secretary.
London Transfer Agency—

7 Bishopsgate, London, E.C.,
21st December, 1915.

STATE OF PARA FUNDING SCHEME.

The State of Para, on the 15th June, 1915, announced that it was unable, from various causes, to meet the payments due on the 1st July, 1915, for the interest in respect of the Loans of the State.

The State has now passed a Law creating a Five per Cent. Funding Loan, out of which will be paid, in lieu of cash, the Interest Coupons on the Loans of 1901, 1907, and 1910 from 1st July, 1915, to 1st January, 1919, both dates inclusive, during which time their Sinking Funds will also be suspended.

Particulars of the Funding Scheme can be obtained at the Offices of Messrs. Seligman Bros., 18 Austin Friars, London, E.C.; or Messrs. Alsberg, Goldberg and Co., Amsterdam; of Messrs. Fonseca, Santos and Vianna, Lisbon; or the Banco Commercial do Para, Para.

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY

New York, December 7, 1915.

The Board of Directors has declared a semi-annual Dividend (being Dividend No. 35) on the Preferred Stock of this Company of Two Dollars and Fifty Cents ($2.50) per Share, payable February 1, 1916, out of surplus net income, to holders of said Preferred Stock as registered on the books of the Company at the close of business on December 31, 1915. The books will not be closed.

Dividend cheques will be mailed to holders of Preferred Stock who file suitable orders therefor at this office.

C. K. COOPER, Assistant Treasurer.

MONEY.

SUPERFICIALLY there does not appear to be much change in actual conditions. Gold continues to go out to the States and to many other countries in considerable quantities, and is being replaced by gold received from South Africa and elsewhere. As foreign balances continue to accumulate in London, there is some difficulty in maintaining discount rates and the value of short money, notwithstanding that we are now within a week of the end of the year. Day-to-day loans are still quoted 4% to 4½%, three months' bills 5⅛% to 5⅜%, four months' bills 5¼% to 5⅝%, and six months' 5¼% to 5⅜%. Nevertheless fundamentally there is a substantial change in the situation. The work of assembling British-owned American securities is making good progress, and in

consequence of the official notice issued by the Treasury, which we publish in a subsequent column, considerable amounts of securities are likely to be sold direct to the United States and still greater amounts to be sold or lent to the Treasury. Bankers are known to hold a very large quantity of American securities for safe custody and for the collection of coupons and dividends, and there will be no difficulty in reaching the owners of those securities through the bankers as well as through the brokers. From a calculation made elsewhere, it will be seen that the country will need to sell a great many securities in the coming year in order to pay for the large quantities of munitions, foodstuffs, and raw materials it will probably buy from the United States.

Another fresh factor in the situation is the new issue of 5% Exchequer bonds free of income tax to foreign holders. Anglo-foreign houses are already commending these bonds to their clients in other countries. Having regard to the accumulation of money that is taking place in neutral countries, and the difficulty in finding employment for it, these 5% short-dated bonds ought to become very popular. Doubtless the demand for them on foreign account will be small until the whole of the Anglo-French loan has been distributed to American investors. But the distribution is making good progress, and in a very short time now the whole of the bonds will have been sold by the underwriting banks. When this has been effected the price is likely to recover to par or over, especially having regard to the abundance of money in the United States as well as in other neutral countries. The new 5% Exchequer bonds at par, free of income tax, will then become an attractive security, and their issue should materially assist the country in making payment for the great quantity of goods it is purchasing from neutral States. A British Government 5% Exchequer bond at par is, indeed, a security which should prove attractive to the bankers of all countries, especially as purchasers will assist neutral countries in selling their surplus products at very profitable prices.

Until the sales of American securities and of Exchequer bonds are sufficiently numerous to bring about a substantial improvement in the exchanges any reduction in discount rates or in the value of money is unlikely to occur. Nevertheless, the fact that foreign bankers can employ money at the profitable rates now current in London for short money, for bank bills, for Treasury bills, and for Exchequer bonds certainly warrants the expectation that the sterling exchange on all neutral countries will be maintained.

BANK OF ENGLAND.

On balance for the week the stock of gold in the Bank of England was increased £810,000 to £51,091,000 in consequence of the receipt on balance of £713,000 in gold from abroad and £97,000 from the country. The movement of gold outwards continues, the total sum withdrawn from the Bank amounting to £1,456,000, which was distributed among a great many countries, including the United States, Canada, Egypt, Spain, South America, and the Continent. On the other hand, £2,169,000 in gold was received. To-day there has been a further withdrawal of £433,000 in sovereigns for the United States. The note circulation increased £130,000, and on balance the reserve showed a decline of £20,000 to £34,444,000. The public deposits increased almost £1,000,000, and there was an addition of £4,565,000 to the "other" deposits in consequence of an increase of £5,585,000 in the "other" securities. In the last fortnight the addition to "other" securities has been £10,000,000, which is probably due to the increase in the advances to the Government for Ways and Means. The public deposits are now £53,135,000 and the "other" deposits £98,734,000. The proportion of reserve to liabilities is again slightly lower at 22.68%.

FINANCING THE GOVERNMENT.

Last week the revenue received reached the substantial sum of £7,194,000. On the other hand, the expenditure was £48,005,000. Consequently there was an excess of expenditure of £40,811,000. This money was provided by the receipt of £10,600,000 from the American Loan, by the issue on balance of £13,000,000 of Treasury bills, by borrowing £10,000,000 for Ways and Means, and by the receipt of £1,484,900 on account of the new issue of 5% Exchequer bonds. The remaining £5,600,000 was taken out of the cash balance, which was reduced to £27,234,000. In the period from April 1 to December 18 the aggregate expenditure was £1,051,829,000, or at the rate of just over £4,000,000 a day. Of course this includes the sum of £104,000,000 repaid to the Bank of England, and referred to in the Prime Minister's speech, but it does not include the £160,000,000 repaid to the Bank in July last, which was taken out of the cash balance.

MONEY IN NEW YORK.

The American exchange has further improved this week from 4.72 to 4.72⅞ for sight drafts, and there has also been an advance in the price of the Anglo-French Loan now that the underwriting syndicate has been dissolved. Short money in New York is as abundant as ever and can be readily obtained at 2%. In consequence of the usual end of the year demand for currency, the reserves of the New York Associated Banks were reduced last week £2,360,000. On the other hand their loans expanded £5,300,000 and their deposits £3,200,000. Hence their surplus reserve was reduced £2,850,000 to £32,754,000. In normal years cash comes back from the interior to New York in large amounts, and in the first two or three months of 1916 the supply of money in New York is likely to exceed anything hitherto witnessed. If it has been possible to dispose of 60% of the Anglo-French Loan to investors during the autumn months the remaining 40% should be easily placed in the early months of next year. Indeed, we expect that the loan will recover to par in the not distant future in consequence not only of the course of the War, and the greater recognition of the strength of the Allies, but also in consequence of the enormous quantity of money that will be seeking investment in the United States.

Rates for prime commercial paper and for call loans in New York are as follows:—

Dec. 22, 1915 ...	Prime paper ...	3-3½%	Call money ... 2½%
Dec. 24, 1914 ...	" " ...	4-4½%	" " ... 2½-3%

POSITION IN INDIA.

Exchange from India is steady at 1*s.* 4 1/32*d.*, and the applications for the 50 lacs of Council drafts amounted to 431 lacs. The demand for money in India continues to expand and the stock of coined silver in the Currency Department has this week fallen another 73 lacs to 3,114 lacs. It should be noted that the cash balances of the banks of Bombay and Bengal are substantially lower than they were at this time last year.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) | Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, December 22, are:—

The following Special Sales have since been made:—

	Rs.	At
Bills on Calcutta	100,000	1/4 1/16

From April 1 to December 21 inclusive the Council granted remittance for **Rs.11,12,50,377,** realising **£7,421,299.** Up to **December 22** of last financial year the total Bills and Transfers sold was **Rs.6,60,44,861, realising £4,405,091.** The total sales for the week ended **December 21** amounted to **Rs. 51,50,000,** realising **£344,235.** The amount to be offered for tender next Wednesday will again be 50 lacs.

SILVER.

THE Silver market this week has been fairly steady, and from 25 1/8*d.* the price recovered to 26 1/16*d.*, but has since reacted to 25 1/8*d.* The recovery arose in consequence of buying orders from India and from the Continent, and the reaction has been due to offerings by China. The steady fall in the stock of silver in the Indian Currency Department should be noted, the amount being reduced to 3,114 lacs, while the stock of gold has risen to 1,101 lacs. Since August the outflow of silver into circulation has been 900 lacs. Exchange is very much in favour of India, and it is obvious that Indian balances are accumulating on this side. It may be possible to adjust these balances by sales of British-owned Rupee Paper or other securities favoured by the Indian people. But it is clear that as matters now stand London is indebted to India for a substantial sum, and part of this money may be sent out in silver in consequence of the increasing prosperity of the country.

Stock Exchange.

	TICKET DAY.	PAY DAY.	CONSOLS.
Settlement Days	Wed., Dec. 29	Thurs., Dec. 30	Wed., Jan. 5

THE following official notice has appeared this week:—

The Stock Exchange Committee has passed the following new rule, which is subject to confirmation on Wednesday, January 5:—

"A candidate of German or Austro-Hungarian birth is ineligible for membership."

The Stock Exchange Committee has issued an official notice that 5% Exchequer bonds will will be a good delivery without any declaration as to physical possession, but a broker before completing any selling order must obtain a declaration from his client, and must fully satisfy himself that such selling order is not on behalf of or for the benefit of alien enemies, either directly or indirectly.

We have pointed out how by the sale of United States securities, or, to speak more comprehensively, North American securities, British holders can assist in our national financing and help to maintain stability of the exchange rate between the United States and this country. Further definite steps have been officially announced this week in detail, and we may here only emphasise the advice we gave our readers last week, that those who hold small quantities of securities should effect their sales through the London or provincial stock exchanges. The important big-holding establishments, such as insurance companies and trusts, will be well aware of what their procedure should be in approaching the Government department here directly.

In the speculative departments of the Stock Exchange the outstanding feature has been the activity and strength of the market for rubber shares. It is reasonably felt that the outlook is one of promise, especially remembering we now have the quotation for the standard quality of plantation rubber at approximately 75% higher than at the beginning of the year. The demand is fully equal to the supply available, and the expectation is held that the demand will be fully maintained and probably appreciably added to. It must, of course, be remembered that the supply, with so much additional area of young companies coming into bearing, is an expanding one. We recently gave particulars showing how some companies had, as to part of expected output, entered into forward contracts at prices far below the current market quotation. Such prices, while above the average of 1914, yet were generally below the price obtained by companies whose year ended June 30, 1915. But, on the other hand, there are many companies which have not engaged in forward contracts at such low prices, or at any rate to any appreciable extent. Many of these are progressively increasing their output and are free to enter into contracts for the New Year upon the improved basis of prices now prevailing. It will have been noticed from the comments we have made upon individual companies that in the main directors are acting with caution in the matter of distribution of profits, and are endeavouring to build up sound financial positions. There are but few instances where a policy of dividing up to the hilt is followed; more often, indeed, appreciable amounts are set aside to reserves. Speaking in general terms, this is very gratifying, and is in distinct contrast to the disposition shown some five years ago, when there was great speculation. Then the pace was forced and profits were distributed on too liberal a scale, and settings aside to reserves were inadequate.

Our readers will be well aware how persistently and consistently in normal times we have urged the Committee of the Stock Exchange to enforce vigilance in considering requests for securing Special Settlements in connection with the shares or securities of newly introduced companies. We have given instances where lâches have occurred, and even premeditated deceit and nefarious devices for marketing shares through the facilities afforded by the London Stock Exchange. Practically it was not until the great stir brought about by the Marconi inquiry that there was the development of a spirit of investigation which had previously been lacking on the part of the officials acting for the Committee. Certainly after that big inquiry there was more care evidenced. We are now living in abnormal times, and the subject of Special Settlements has not been so frequent as prior to the War. We note with satisfaction that what we believe to be an entirely new procedure has been initiated. Quite recently a request has been referred to the Committee to grant a settlement in Ural Emba Oilfields, Limited, a "Special Settlement" being asked for in respect of 100,000 £1 shares, 15*s.* paid, the Company being now in liquidation. In addition to the ordinary formal notice posted up in the Stock Exchange that an application

The only means of securing relief from **Income Tax and Super Tax** and of providing for **Death Duties** explained in a special brochure

"DEATH & TAXES"

A Copy will be sent on application to

THE NATIONAL MUTUAL
LIFE ASSURANCE SOCIETY,
39 King Street, Cheapside, London, E.C.

of such character had been made, there is appended to the notice, *re* the Ural Emba undertaking—

> "Members having bargains open in these shares are requested to communicate with the Secretary of the Committee for General Purposes."

Does this foreshadow a modification of the routine that hitherto has been adopted? Heretofore Special Settlements have been something like marriage banns, and the addendum asking the congregation if they "know any just cause or impediment" omitted.

COLOMBIAN NORTHERN RAILWAY.

"The disastrous European war, affecting as it does the economic position of the whole world, acts like a crucible through which all English companies must pass. Thus far your Company has stood the test in a manner for which there is every cause for satisfaction." Such were the remarks of the Chairman of the Colombian Northern Railway Company at the recent annual meeting, and the accounts then presented, covering the twelve months to June 30 last, fully bear out the contention. The gross earnings at £53,864 are within £134 of those secured in the banner year, 1913-14, and whilst the net earnings at £36,714 show a diminution of £2,502, the loss is due almost entirely to extra outlays on the permanent way, and to the thorough overhauling of the rolling-stock—expenditures which in their very nature must increase the strength of the Company and enable greater economy of operation to be exercised as time goes on. The profit for dividend is £7,664 down compared with the preceding year, owing to an increase of £5,213 in miscellaneous charges. Of this increase, £3,172 represents the allocation to a fund for the redemption of the Debentures which now has to be created under the trust deed, and £1,275 preliminary expenses written off. After making these provisions the dividend of 4% has been maintained, £3,000 has been placed to reserve, raising the fund to £18,000, and the balance carried forward has been increased from £27,920 to £31,514.

The income statement of the Company for the last six years is set out below:—

Colombian Northern Railway.

	1914-15	1913-14	1912-13	1911-12	1910-11	1909-10
	£	£	£	£	£	£

* Discount on issue of Debenture stock written off.

It will be noted that the margin behind the dividend of £6,594 is sufficient to pay an extra 2¼% on the share capital, so that the profit-earning capacity of the line last year was equal to a dividend of about 6¼%, and this too after making provision for the redemption of debt and writing off preliminary expenses. The directors have always pursued a conservative dividend policy, and, while progressive distributions have been made, the wise course has been followed throughout of husbanding resources and building up a strong financial position. The marked improvement in the dividend-earning capacity of the Company in recent years and the conservative manner in which the profits have been distributed will be seen from the following table:—

Colombian Northern Railway.

Year to June 30	Dividend Earned—Sum Available	Dividend Earned—Rate per Cent.	Dividend Paid	Amount Distributed	Margin behind Dividend
	£		%	£	£
1915	18,594	6·20	4	12,000	6,594
1914	26,258	8·75	4	12,000	14,285
1913	21,679	7·22	4	12,000	9,679
1912	15,996	5·33	3	9,000	6,996
1911	13,907	4·63	2	6,000	7,907
1910	13,946	4·65	2½	7,500	6,446
1909	11,567	3·85	2½	7,500	4,067
1908	9,323	3·10	2½	7,500	1,823
1907	7,444	2·48	2	6,000	1,444
1906	4,541	1·51	Nil	—	—

The railway is only 30 miles in length, stretching from Bogota to Zipuquira, but the Company is interested in an extension some 75 miles northward which will open up an extremely fertile part of the country. The concession for the construction of this extension has been vested in a new Company, the Colombian Central Railway, and the line has been partly built, but owing to the War construction operations are for the moment suspended. It is announced that the Government of Colombia have decided to take over the extension and are understood to be desirous of completing it. It is to be feared, however, that during the continuance of the War it may be difficult, if not impossible, to finance the operation, and, as with similar undertakings, it will be necessary to wait until peace has been restored and a more normal Money market has been established. However, the fact remains that the Company undoubtedly owns a valuable property, and that its value will be greatly increased when the extension northward, already commenced, has been completed.

The £10 shares of the Company, although not officially quoted, can be obtained at about 4. At this figure the dividend of 4% yields the investor as much as £10 per cent. The 5% First Mortgage Debenture bonds are a relatively safe investment, the interest being covered by existing earnings fully four times over. The price is 76¼, and a return of £6 11*s.* 7*d.* per cent. is forthcoming. They are redeemable at par on May 1, 1945, or at any time earlier, at the Company's option, on six months' notice, at 105%. From the year 1915, 10% of the profits has to be set aside as a sinking fund for redemption purposes. The capital of the undertaking is as follows:—

Colombian Northern Railway.

Security	Amount	Interest	Price	Yield
	£	%		£ *s.* *d.*
5% 1st Mort. Deb. Bonds	180,000	5	76¼	6 11 7
Ordinary shares (£10)	300,000	4	4	10 0 0
Total capital	480,000			

WHITE PASS AND YUKON RAILWAY.

The White Pass and Yukon Railway Company did badly last year. The War is of course entirely responsible for this. With the outbreak of hostilities business was completely disorganised; shipments of freight were almost entirely stopped, and hundreds of intending passengers to Alaska and the Yukon changed their plans and did not go. The local companies thus lost a large amount of revenue that would otherwise have been earned, and they were so short of funds that they were unable even to pay the interest due on their bonds. The result is that the total revenue of the Company for the year amounted to only £56,233, and after charging all expenses and the interest and bonus on the Debenture stock and Debentures the profit and loss account shows a loss of £26,182. Summing up his report on the general position, the President of the local Companies in April last stated that the effect of the European War on the world's financial institutions is naturally curtailing the facilities for financing new mining ventures, and though several promising discoveries in the Yukon and in Alaska are spoken of, it is thought doubtful if it will be possible to arrange to raise money for their development until more normal conditions prevail.

Mining Topics.

BUSINESS in the Mining department during the week has been quiet. A feature has been the hardening in prices of Eastern Rand shares after their recent setback. Modderfonteins have been steadily purchased, improving to 15⅞. A small dividend had been hoped for in respect of the Randfontein Central, and the announcement that no dividend was to be forthcoming in respect of this Company and the Randfontein Estates has caused setbacks in the prices of the shares, which close at just under 10*s.* and 12*s.* 6*d.* respectively. We deal with the Randfontein Central in subsequent remarks; the position has become a serious one. The Langlaagte Estates for 1915 attained an unexpected degree of success. For both half-years of 1914 it distributed 5%, and this year for each half-year it has distributed 7½%. The Consolidated Langlaagte has increased its dividend to 12½%, making an aggregate for the year of 32½%, compared with 25% for 1914. Two decreases are shown by the Barnato group, the Primrose declaring 7½%, against 20% the corresponding period last year, and the Rietfontein makes no distribution against 2½% for the December half of 1914.

Among miscellaneous shares an adverse feature has been the fall in Casey Cobalt shares on the issue of a disquieting circular, the contents of which came as a surprise to the market, inasmuch as apparently no information has been published in regard to the mine since June. The Company belongs to the same group as the Canadian Mining Corporation, in regard to which we recently had to complain of the inadequateness of the information supplied. This week our contemporary, the *Financial Times*, in asking for further information in regard to the Casey Cobalt, says: "It is something to get even the above memorandum from a board so uncommunicative as that of the Casey Cobalt, but it has simply whetted the appetite of those interested for further elucidation of the position." Last year the shares touched 42*s.* 6*d.*; now they are nominally quoted at 5*s.*

The market for copper shares has shown some excitement consequent on violent fluctuations in prices of metal. After weakness, "Standard" copper sharply advanced, and closes at about £84¼ per ton. American shares have been bought in New York and Rio Tintos in London.

Dividends.—In the following table we contrast the South African dividends so far announced in 1915 with the distributions of each half of and full year 1914 and year 1913:—

	1913 Total	1914 1st Half	1914 2nd Half	1914 Total	1915 1st Half	1915 2nd Half	1915 Total

RANDFONTEIN POSITION.

IN THE STATIST a little more than six months ago we forecasted a lugubrious outlook for the Randfontein Central Company in respect of 1915, but the official statement of results for the year is far worse than our Cassandra anticipations of May last. It looks as if in the Far West Rand we have a state of affairs analogous to the dire position revealed in the autumn of 1911 as to the East Rand Proprietary. With the East Rand a strong group, which had investment interests, secured an examination and investigation by high experts, with the outcome that the true position was ascertained. Something of the same nature is apparently requisite in connection with the Randfontein situation, where we have an interminable capital expenditure and financial discomfort of intense character. We may first set out a contrast of the results announced as to 1915 with the figures given in the report for the year 1914:—

	Estimate 1915	£	1914	£
Income ...	£2,175,000 to £2,850,000		£2,084,082	£2,008,082
Expenses		2,034,388		2,000,000
		654,100		877,082
Profits and war tax ...	£[illegible]		£[illegible]	
War charges on gold ...	£7,000		—	
Interest on [illegible]	£8,000		22,881	
Premises, &c. ...	48,000		74,705	
Debenture interest ...	171,048		176,736	
... redemption ...	£1,000		£1,600	
Dividend	(2½%) 108,592		—	
		536,540		471,850
		117,560		405,119
Balance brought forward ...		287,559		
		405,119		405,119
Expended [illegible] on capital account	£217,000		Capital Expenditure	£[illegible]
... on development ...	103,000			
		320,000		[illegible]
	Deficit	100,000	Carried forward	£[illegible]

This surface plan shows the portion of the Randfontein Estate that has been developed upon as mining ground. The boundaries of the former areas of subsidiary companies are indicated. The final fusion of the Randfontein South and Randfontein Central areas was effected in 1911, all the properties merging into the Randfontein Central.

In the March quarterly statement it was announced that the Company had issued at par 150,000 of the reserve shares. This issue brought in £150,000, which this week's statement includes with the profit result of the year!

The following is a condensed statement of the gross profit of five years to 1915 inclusive, and the appropriations that were made:—

	£	£
Profit income of five years' operations to 1915 inclusive		4,176,808
Government profit and war taxes and charges	346,656	
Local taxes, licences, &c.	116,867	
Phthisis, &c.	200,395	
Strike costs (1913)	14,377	
Amalgamation expenses (charged to revenue)	69,433	
Debenture, &c. interest	859,979	
,, redemption (1911 and 1915)	168,000	
Dividends	737,647	
Depreciation written off (1911 and 1912)	16,422	
"Expended on capital account"	1,665,013	
Expended on development (1915)...	103,000	
	4,277,789	

In THE STATIST of March 20, 1915, we dealt comprehensively with the position of this Company as disclosed by the accounts for the year 1914. The balance sheet of December 31, 1914, showed the property, development, shafts, &c., standing at an aggregate value of very near to £5,700,000, and a very large addition—near to a million and three-quarters—had been made to capital outlays out of profits. In respect of total capital outlays the depreciation item must be a very considerable one, yet the direct charge to working costs for depreciation in the past five years has amounted to only £16,422,

		£
1911.	**Depreciation of machinery, spares, &c., taken over from Randfontein South Company ...**	8,146
1912.	**Ditto of live-stock, furniture, and stores ...**	8,276
		16,422

And in the period there has been spent under the head of capital expenditure and charged against working profits:—

	£
1911	610,052
1912	324,181
1913	210,023
1914	303,757
1915	217,000
,, ...	+ 103,000 development
Aggregate	1,768,013

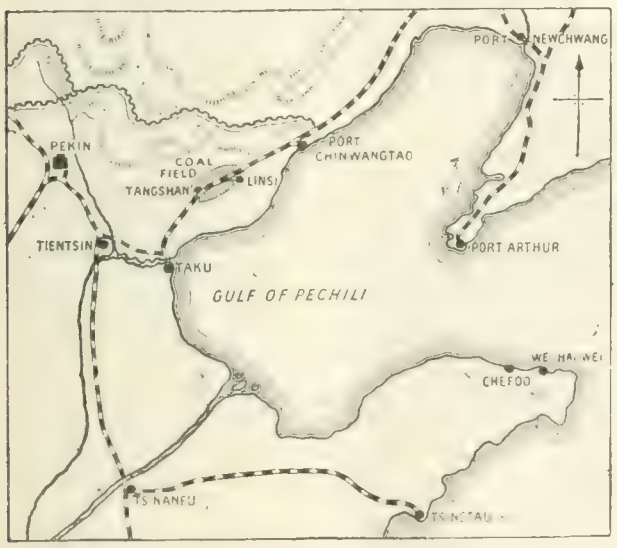
This aggregate included large amounts not represented by assets but comprising commissions and expenses in connection with issue of Debentures, &c.

Investigation of the depreciation position and inquiry into the reasons for the unceasing capital outlays charged against the profits seem imperatively called for. How to bring about such an investigation is a very difficult problem. It is not with this as with other undertakings on the Rand, that the shareholders as a body have control, for a majority of the Randfontein Central shares is held by the Randfontein Estates Company, and in order to obtain an inquiry it would be necessary for shareholders in the Randfontein Estates to come forward and assist the shareholders in the Randfontein Central Company. But then it is a moot point who really holds the majority of the shares in respect of the Randfontein Estates. A very large proportion of the capitals of both undertakings is held in France, a considerable proportion in this country, some in South Africa, and a small proportion on the Continent. Sir J. B. Robinson's interest both in shares and Debentures is an unknown quantity.

As to the wail in the official statement accompanying the figures of results for 1915 about the heavy Government charges in respect of phthisis, profits, and other taxation, we fear that the part of the wail, that would on the face of things seem to be reasonable, arises from the fact that it has been the custom of the directorate of the Company to show big profits to the shareholders by charging as capital expenditure what ought largely to have been debited to working expenses, and then professing to the Government that the profits are really nothing like so large as those presented in the accounts presented to shareholders.

In the early days of the Randfontein group, the individual producing concerns now included in the huge Randfontein Central Company attained success. Then came the policy, or mania, of amalgamations, which ended in the final big amalgamation, and the erection of an extravagantly huge centralised plant, partaking of the nature of a "white elephant," the operation of which has apparently disclosed the erroneousness of the original ideas as to its efficiency and economical working power. The outcome of the mistakes made financially and physically, is the ghastly state of affairs that now exists.

Reference is made in the official statement to an intention to modify the working procedure. Rumours, indeed, have been current recently that there is to be a discontinuance of the use of the separate four 100-stamp mills situated on the southern properties, and, instead, a further concentration of reduction operations at the great Central plant. If this policy be carried out there will be necessity for big writings off for depreciation, and, furthermore, there will be also the necessity for considerable further augmentation of capital outlay for additional plant to be put up. In



the circumstances, then, it certainly seems desirable that the whole of the undertaking—the physical condition below and above ground and the financial condition—should be subject to complete investigation by independent experts, and a full report made as to what is wrong, with recommendations in regard to the proper working of the several "mines" for the profit of the long-suffering shareholders.

Year after year has gone by without fulfilment of perennially promised improvement; instead, the concern sinks deeper and deeper into the mire as time passes. This cannot go on indefinitely without disaster overtaking the shareholders' interests, for it must be borne in mind that the Company has a large Debenture debt of nearly £3,000,000, in addition to an issued £4,343,700 share capital.

It will be remembered that in the matter of the East Rand Proprietary the South African Government in September 1911 bestirred itself and initiated an inquiry into its state of affairs, consenting in the end to the Central Mining group experts and others carrying out an investigation. In the circumstances of the Randfontein interholding above referred to, it looks as if the intervention of the Government is a necessary and desirable outcome of the present position of the undertaking, the proper conduct of which is of great importance to South Africa. We have heard of numerous expostulations in recent years having been addressed by shareholders to the directors of the Company, and we have also heard of instances of profound dissatisfaction with the answers that have been made to shareholders' complaints. The conclusion is clear. Shareholders, instead of addressing mere complaints to the Company, should go over the heads of the officials of the Company and appeal to the South African Government to take measures for the protection of their interests by itself taking in hand an investigation of the operation and direction of their property.

CHINESE ENGINEERING AND MINING COMPANY.

THE LARGEST CHINESE COAL MINE.

LAST week the meeting was held of the Chinese Engineering and Mining Company, and was reported in our columns. About this Company the ordinary man-in-the-street knows little. A few know that it is a coal proposition, but very few indeed are aware that it is the largest coal mine in China. The word "Engineering" in the title is superfluous, as the Company's engineering shops and appliances are used for its own requirements only. In the usual primitive methods the coal-field has been mined for centuries, but Western methods were not introduced until about 40 years ago, and then for a long period in only a half-hearted manner. A local company was formed some years ago, and in 1901 its plant and rights were acquired by the Chinese Engineering and Mining Company—an English registered Company with a large proportion of Belgian shareholders. The Company operated in the area, but encountered some five years after it had been formed the competition of a locally-formed enterprise with Chinese capital known as the Lanchow Mining Company, which in 1906 acquired from the Chinese Government a concession to mine part of the area that the Chinese Engineering and Mining Company regarded as included in its Kaiping coal concession. An appeal was made to the Chinese and to the British Governments to investigate matters, and eventually an arrangement was come to and consummated in 1912 for the formation of an administration to work the joint properties of the two Companies.

The modification was taken advantage of to effect a reconstruction of the Chinese Engineering and Mining Company which has an issued capital of £1,000,000 in £1 shares, and in 1912 issued at par £1,200,000 6% First Mortgage Debentures known as Kailan Bonds. The bonds are redeemable by 2% annual drawings at par (December of each year). The first drawing was effected in December, 1913, and £24,000 per annum redemption will continue for 50 years.

Before entering into further particulars as to the finance and working results of recent years, we may recall the position of the coalfield is about 70 miles west of the port of Chin Wang Tao, in the Gulf of Petchili, and approximately 160 miles almost due east of Pekin. At the port mentioned, extensive area with wharves, &c., and harbour accommodation, together with a network of railway sidings and six miles of private line are owned by the Company, and the outlay on the port and surroundings has been approximately £500,000. The Company also has accommodation branches at several Chinese and also Japanese, Manilla and other ports. The railway and some canals afford outlets—north, west, and south, and the shipping accommodation to the east, give it internal and ocean outlets for the coal it produces. The output has been a growing one for several years past, notwithstanding the competition so prevalent between 1906 and 1910. The sales of the Chinese Engineering and Mining Company alone, prior to the reconstruction of 1912, were as under:—

Years to end of February	Tons
1905	843,000
1906	825,000
1907	914,000
1908	959,000
1909	1,144,000
1910	1,231,000
1911	1,215,000

There are four main "mines" in the coalfield, and at three of them large shafts have been sunk to a depth of 1,500 feet. It has been computed that the known existence of deposits to a depth of 3,000 feet contain some 500,000,000 tons of coal. The four separate deposits in the field are connected by branch railways with the Pekin Mukden main line.

After reconstruction, the Company's financial year was made to end on June 30, and the sales and results obtained for each of the last three years are set out below:—

Year ended June 30—	191[illegible]	1914	1913
	£	£	£
Profit proportion ...	161,428	169,360	99,977
Interest, agency, &c. ...	[illegible]	8,[illegible]	9,778
	171,[illegible]	177,8[illegible]	109,735
Brought forward ...	52,268	5,854	—
	£ 223,[illegible]	£ 183,[illegible]	£ 109,735
Administration ...	12,475	10,236	10,845
Preliminary expenses	—	11,[illegible]	[illegible]
Income tax	12,176	9,245	7,079
Dividends	[illegible] (1 %)	[illegible] (8%)	8[illegible] (8%)
	[illegible]	[illegible]	[illegible]
Carried forward ...	99,159	[illegible]	5,854
Total sales of coal produced by both Cos. (tons)	2,692,382	2,411,038	1,728,296

The profits of the 1914-15 period were somewhat marred by the fall in exchange rate to an average of 1*s.* 7*d.* per dollar, compared with 1*s.* 10½*d.* per dollar for the previous twelve months.

The sales of the 24 weeks to December 18, 1915, have been 1,171,744 tons, against 1,139,710 tons for the corresponding period of 1914, of which 19 weeks was war period.

In the circumstances of war, the Chairman at the meeting was guarded in his utterances as to the outlook, but it is satisfactory to take note that in the war period of twenty-four weeks to December 18, sales in 1915, compared with the same period of 1914, averaged an increase of about 1,330 tons per week.

The Kailan Mining Administration is conducted jointly by the representatives of the Chinese Engineering and Mining Company and the Lanchow Mining Company. The profits of the two Companies are pooled, and the arrangement as to apportionment between the Company has been officially set out as under:—

"After making provision for the interest on the Debenture issue, the amount required for the purpose of the sinking fund, and for a reserve for depreciation, the profits of the business up to £300,000 are divisible as to 60% to the Chinese Engineering and Mining Company, Limited, and as to 40% to the Lanchow Mining Company. The profits in excess of £300,000, and the profits from any new business and shafts worked by machinery away from the present shafts are to be divided equally between the two Companies. In addition to the existing mines of the two Companies, the Kailan Mining Administration will have control of the mining rights of the Kaiping Basin, an estimated area of 100 square miles, being 20 miles in length by an average of five miles in width."

At June 30, 1915, the developed reserves of coal were reported as 16,430,000 tons, an increase compared with a year previously of some 2,000,000 tons. Such increase indicates that about 4,500,000 tons were developed in the year against the quantity raised, as 2,411,038 tons were sold.

Balance Sheet as at June 30.

LIABILITIES.

	1915	1914
	£	£
Share capital: 1,000,000 shares of £1 each	1,000,000	1,000,000
6% 1st Mort. Debentures (Kailan Bonds)	1,152,000	1,176,000
Interest	34,560	35,280
Debenture redemption reserve	60,000	36,000
Sundry creditors	101,773	55,348

Treasury bills (£100,000)	98,584	—
	2,497,492	2,384,896

On the basis of 10% dividends being continued, at present price of 1⅝ for the £1 share the yield afforded is about 6⅜%. The Debentures are quoted at 99½-100, which includes just six months' accrued interest.

Amount	Description	Par	Price	Div.	Yield
£		£	£	%	£ *s.* *d.*
1,152,000	6% 1st Mort. Debs.	—	99¼	6	6 3 9
1,000,000	Ord. shares	1	1⅝	10	6 7 0

Burma Corporation.—We referred last week to a statement in the weekly development report to the effect that a rise 1,292 feet south in the 430-foot level, from 35 feet to 40 feet, averaged 40 oz. silver, 50% lead, and 40% zinc. We are informed that the values should have been stated as 50 oz. silver, 40% lead, and 28% zinc.

CHAMPION REEF.

The year ended September 30, 1914, was the most prosperous experienced by this Indian mine since 1905. A slightly smaller quantity of ore was milled, but the yield per ton, partly owing to the higher gold contents of the ore, and partly on account of better extraction through continuous use of the new tube mill plant, rose to 51*s.* 7*d.* per ton, against 48*s.* 7*d.* per ton in the previous twelve months. This increase in grade considerably more than offset the rise of 1*s.* 6*d.* per ton in total working costs—mostly due to the extra development work done—and the working profit consequently improved to £235,269, or 22*s.* 3*d.* per ton, for the past financial year, in contrast with £225,489, or 20*s.* 9*d.* per ton, in respect of 1913-14. The improvement in the operating results since the very low level of 1909, which followed the great prosperity of the years 1900-1905, will be seen from the following:—

	Ore Milled Tons (2,000 lb.)	Waste Rock Sorted %	Total Gold Yield* per Ton *s.* *d.*	Working Expenses per Ton *s.* *d.*	Working Profit† £	Working Profit† per Ton *s.* *d.*
1901 ...	126,045	—	95 10	38 6	360,975	57 4
1905 ...	240,987	—	68 5	26 9	502,420	41 8
1909 ...	193,063	17·5	45 2	31 0	136,613	14 2
1910 ...	209,082	18·2	42 2	28 1	147,411	14 1
1911 ...	205,169	19·1	45 8	27 4	188,055	18 4
1912 ...	220,610	20·5	45 5	26 1	212,882	19 3
1913 ...	220,511	20·2	46 3	26 6	218,001	19 7
1914 ...	216,934	15·2	48 7	27 10	225,489	20 9
1915 ...	211,368	12·7	51 7	29 4	235,269	22 3

* Includes yield from accumulated tailings and slimes treated.
† Before payment of royalty.

After deducting royalty payable to the Mysore Government, the net profit of the past year amounted to £201,634, against £195,273 in the previous financial year. A sum of £15,000 is again put to reserve, and £34,010 is written off for depreciation, &c., out of the past year's profits, against £39,294 in the previous twelve months. The dividend for the year is increased to 56⅔%, in comparison with 53⅓% for 1913-14, and the carry-forward is slightly raised to £4,511. The balance sheet shows a very strong financial position, the liquid assets, excluding 17,050 £1 shares in the Kolar Mines Power Station, Limited, exceeding current liabilities, including the final dividend, by £71,000.

The following table illustrates the conservative manner in which the past profits have been distributed, shows the variations that have previously occurred in the prosperity of the Company and in the price of its shares, and indicates how the ore reserves and the depth of the mine have increased:—

Year to Sept. 30	Net Profit	Amounts Written Off	Divs. Amt.	Divs. %	Ore Reserves Tons (2,000 lb.)	Tons (2,000 lb.) Milled	Lowest Level Feet.*	Price of Shares end of Year *s.* *d.*
	£	£	£

* Incline depth.
† Excluding 46,302 tons set aside for the first time as permanent pillars to minimise risk from air blasts.

It will be seen that for the sixth year in succession the ore reserves show an increase, and at September 30, 1915, the quantity of 495,015 tons in sight was a record for the Company, representing nearly 2½ years' supply for the mill. It is very satisfactory that the ore reserve position is strong, for quite recently in the three bottom levels of the mine there has been a marked and persistent falling off in the value of the ore developed. Consequently, the Superintendent says "the prospects for the immediate future are not so favourable," and he considers it may be necessary to reduce the rate of output from the mine. This reduction would appear to have already been com-

menced, the returns for October and November being respectively 10,684 oz. and 10,366 oz. of fine gold, as compared with 11,082 oz. for the month of September and an average of 10,763 oz. per month for the year under review. While taking full note of this situation, shareholders should bear in mind the remarks of the Chairman at the meeting last week, when he said:—

Fluctuations in value constantly occur in gold mines of this character, and it may be that we have now to face a leaner period as regards results; but long experience of all the important mines of the Kolar goldfield, and of the many changes which have been noticeable from time to time in the different workings, strengthens me in the belief that if a falling-off does take place it will be only temporary, and that an improvement may again be confidently anticipated.

The Company has just completed, at a cost of £207,360, paid for entirely out of profits, a new circular shaft for the purpose of opening up the mine at depth. The bottom of this shaft, which was commenced 12 years ago, is 3,860 feet vertical from surface.

The outlook for the Company is obscure for the reasons stated above, but, judging by its own past experience and the varying fortunes of the neighbouring mines which, after encountering poor zones, have invariably got into good ground again, the adversity will quite likely be of temporary character. For a time it is probable that dividend payments will be reduced, but then as at the present price of 9*s.* cum div. the 2*s.* 6*d.* shares afford a yield of nearly 17% on last year's distribution of 56⅔%, the poorer prospects are discounted to a considerable extent. The large cash resources will enable the Company to pursue the development of the mine to greater depths with vigour, and earnings will not need to be unduly depleted for the purpose.

ARAMAYO FRANCKE MINES.

For the year ended May 31, 1915, this large Bolivian tin-producer was handicapped by the difficulties brought about by the War and the very low price ruling for tin. The ore treated during the year amounted to 35,774 tons, against 43,366 tons in the preceding twelve months, and this much smaller rate of working, combined with the fact that a larger proportion of tailings were treated, resulted in the output of black tin falling to 2,060 tons, equal to a yield of 5.8%, against an output for the previous year of 3,442 tons, equal to a yield of 8% tin. The quantity of tin sold declined from 4,218 tons in 1913-14 to 2,314 tons for the past year, and as an average price of only £60¼ per ton was realised, against £83½, the tin sold last year fetched only £139,319, in comparison with £352,048 in the previous twelve months. In view of this heavy decline in revenue from tin, and of the fact that returning charges for smelting have increased from about the normal level of £10 per ton to from £20 to £25 per ton, it is not surprising that the profit in Bolivia for the year ended May 31, 1915, was no more than £3,504, against £135,765 in 1913-14. The severity of the set-back in the Company's prosperity, largely caused by the War, will be seen from the following:—

Year to May 31	Ore Treated Tons	Black Tin Produced Tons	Black Tin Produced Yield %	Tin Sold Tons	Value of Tin Sold £	Value of Tin Sold Per Ton £	Bolivian Profit £	Av. Price of Metallic Tin for Financial Year £
1909 ...	17,522	3,292	19	2,863	180,061	62¾	57,036	131¾

* Profit after writing off £18,068 for bad debts.

Happily the Company was in a very strong financial position to meet the crisis, having carried forward from 1913-14 the large sum of £90,365. Consequently, despite an actual net loss of £14,245 for the year to May 31, 1915, the directors were able to continue the redemption of Debentures to the extent of £20,000, and at the same time to continue the payment of dividends. Three distributions to shareholders aggregating 7½%, tax free, were made for the year, and the carry-forward to the current year has been reduced to £9,138, as shown below:—

	Years to May 31 — 1915	1914	1913	1912	1911	1910

* Loss. † Applied to reduction of property account.

Despite the redemption of Debentures and the payment of dividends, in face of a loss on working for the year, the balance sheet at June 30, 1915, still showed a very strong financial position, the surplus realisable assets amounting to £373,421, against the issued capital of £597,090, plus £20,000 of Debenture stock. True, £278,750 was locked up in tin and other mineral stocks unsold, but with the widening of the market for the metal and the considerably increased prices lately prevalent these stocks, which were taken into the accounts at cost of production, should now have a considerably enhanced value.

As regards the prospects for the current year, and the future, the Chairman stated at the meeting that production had become normal again. The Company has very extensive tin, wolfram, bismuth, copper and silver bearing properties, and it is advised that recent development work at the tin-silver mines of Chocaya has opened up an important field of tin-silver ore. New plants which have been erected for the purpose of improving the results obtained will soon be in operation, and if the market could be relied upon to maintain its recently improved tone, with the maintenance of about the present price of about £165 per ton for metallic tin, there is little doubt that the Company will show considerably better results for the current year than for the year under review. Already two interim dividends representing 5% on the capital, free of income tax, have been paid. In addition, £10,000 more of Debentures have been redeemed, and the balance of £10,000 will probably be paid off next year, when the share capital of £597,090, in £1 shares, alone will remain. However, as the price of the share is 1⅜, the looked-for improvement in the future fortunes of the Company is considerably discounted.

ABBONTIAKOON.—Issued capital, £625,457 10*s.*, in 10*s.* shares. Loans remaining to be cleared off, about £20,000.

LONDON, SATURDAY, DECEMBER 25, 1915.

THE NATION'S NEED.

A MANIFESTO TO THE COUNTRY.

The following manifesto upon the Nation's Need, drawn up and signed by a number of bankers and others in close touch with financial conditions, will, we trust, be most carefully considered by the country. The problem of finance underlies all the other problems. The nation's need in the matter of men and munitions has been, or is in course of being, supplied, but nearly all the money has still to be found with which to maintain the forces and to supply them with arms and equipment in 1916. This is the work that must now be carried on from hour to hour by everyone in the nation with unflagging persistency until victory is secured.

At this time of great national danger it is imperative that every citizen should realise the vastness of the work which Great Britain has to perform and should so act that the full strength of the nation may be put forth. Not only must everyone pull, but, in order that the work may be well within the nation's strength, all must pull together.

The Allied fleets have driven the enemy's ships from the seas, and have established a blockade of the enemy's coasts. The enemy are thus prevented from carrying on their foreign commerce except to a very small extent, their income is seriously curtailed and their financial strength diminished. Moreover, the fleet has enabled both the British people and their Allies to draw abundant supplies of food, of material and of munitions from all parts of the world, to conduct their foreign commerce much as usual, and to maintain their income at a high level. The closure of the Dardanelles and of the Baltic is, indeed, the only remaining impediment to the overseas commerce of the Allies.

On land the Allies have added steadily to their military strength from week to week ever since war began, not only actually but relatively to the enemy. Germany's hopes of victory depended upon a short and swift war. These hopes have been completely dispelled.

In a long war success depends mainly upon the respective financial resources of the combatants, and the consequent power of one of them to maintain, or to add to, its fighting strength when the other's is declining, or is not capable of expansion. It is not in doubt that the financial resources of the Allies, when fully mobilised and wisely controlled, will be vastly greater than the enemy's.

Therefore, the enemy's efforts have been directed to three essential matters:—

(1) To seize victory before the forces of the Allies could be mobilised in overwhelming strength.

(2) To reduce the economic and financial strength of the Allies.

(3) To prevent the Allies from making or purchasing sufficient equipment and ammunition for their ever-expanding forces.

The endeavours of the enemy to accomplish these objects have been completely frustrated by the co-ordination of the armies, of the financial resources, of the equipment and of the munitions of the Allied nations. The success of the Allies in defeating the enemy's efforts to cripple them in men, munitions and money before they could assemble their full strength has now brought the war nearer to its final stage. Indeed, only one thing is now needed to command victory. The Allies have assembled new armies of overwhelming strength in France, in Russia, in Italy, and in Great Britain, and everything needed to equip them and to supply them with munitions has been secured, or is in process of manufacture. **The only thing remaining to be done is to provide all the money needed to support these great armies of new men, and to pay for the vast quantities of arms and munitions now being manufactured in all parts of the world.**

The task of finding the greater part of the immense sums of money needed by the Allies is the special duty of the British people, for they in particular possess the necessary financial resources. Their manufacturing power has not been reduced by invasion, their cities have not been destroyed, their ports have not been shut off from the rest of the world, and their income has not been diminished by the absence of tourists and by other circumstances. Indeed, the income of the British people has been maintained at a very high level. Their exports, though not as great as before the War, are greater than they were as recently as 1909, their income from interest on capital invested abroad has been reduced but little, the earnings of their ships are greater than ever, and their factories are working full time. Moreover, the effect upon the production of the nation of the mobilisation of a great army has been largely neutralised by the more vigorous and effective work of the civilian population in general and of the women in particular. Lastly, the average individual income is much in excess of any total hitherto reached. Thus the power of Great Britain to meet her own expenditures, and the sums needed by her Allies is very great.

What is it, then, that the country has to do? The Chancellor of the Exchequer has informed the nation that the Government expenditure in the current fiscal year will be:—

	£
Navy	190,000,000
Loans to Allies and Colonies	423,000,000
Army	715,000,000
Miscellaneous ...	92,000,000
Interest on Debt ...	67,000,000
Civil Services, Post Office, Local Taxation, &c. ...	103,000,000
Total	£1,590,000,000

And that in 1916-17 the expenditure will reach £5,000,000 per day, or £1,825,000,000 per annum.

Therefore the work that the British people are called upon to perform is to provide out of all their financial resources a sum of nearly £1,600,000,000 in the current fiscal year, and over £1,800,000,000 in the next fiscal year. In the current calendar year (1915) the British people will spend about £1,300,000,000 upon war and government, and next year (1916) will need to spend about £1,800,000,000 in place of a sum of about £200,000,000 a year before the war. To raise this vast sum is a stupendous task, and one that will try the mettle of the nation as it has not been tried for a hundred years. Not only has the nation to find this great sum of £1,800,000,000 next year, but it has to find it with several millions of its most active sons in the fighting line.

No one can realise the vastness of the task before the nation without becoming keenly conscious that it demands the strenuous co-operation of every man and woman, youth and maiden in the country; that the nation's energies must be completely concentrated upon the production of really essential things; and that the production of all non-essentials must be wholly stopped. Moreover, not only must the nation avoid the consumption of all non-essentials, but must even restrict the consumption of essentials to the limits of efficiency. Furthermore, individuals possessing securities marketable abroad must sell them in order to pay for goods and munitions purchased abroad for which no other means of payment can be provided. Lastly, the credit of the nation and of individuals must be employed in order to pay for goods and munitions purchased abroad for which payment cannot be made in goods, services, or securities. Only by all classes, employers and employed alike, adding to, and most carefully husbanding, income, by selling foreign securities and by creating foreign credits will it be possible to provide the vast sum needed by the nation and the nation's Allies.

The work of mobilising the whole of the nation's financial resources must now be undertaken with courage and with vigour.

With everyone anxious "to do his bit," the great task of financing the War can and will be accomplished and ultimate victory assured.

AMERICAN SECURITIES.

TREASURY'S INVITATION TO BRITISH HOLDERS.

The official announcement with regard to the sale or deposit of American dollar securities is of special interest to our readers, and consequently we reproduce the notice *in extenso*. It will be particularly noted that holders are requested to sell rather than to lend their securities, and that sales of securities through the Stock Exchange in the ordinary manner are as useful as the deposit of the securities with the Treasury, especially if the proceeds of the sale are invested in the new Exchequer 5% Bonds. In the national interest we trust that as many of our readers as possible will agree to sell their securities and will accept payment in Exchequer Bonds. It will also be noted that it is optional for holders of securities to accept payment for their securities in cash or in Exchequer Bonds. The official notice is as follows:—

On and after January 1, 1916, holders of American (including Canadian) dollar securities are invited to place their securities at the disposal of the Treasury either by sale to the Treasury or, if they are not prepared to sell them, by deposit on loan with the Treasury, in accordance with the provisions of the Memorandum printed in the *London Gazette* of December 17. In view of the time required for dealing with the securities now being tendered by Insurance and Trust Companies, the Treasury are not in a position to consider offers from individual holders before January 1.

In order to facilitate the working of the scheme the following explanations are here added:—

1. While it is not possible to compile a complete list of securities which will as a rule be acceptable for the purposes in view, the following general observations will serve as a guide:—

(*a*) No purely sterling securities can be adopted. It is essential that securities tendered either for sale or for deposit shall either be expressed in United States of America or Canadian currency, or, if expressed in sterling, shall be convertible at the holder's option into dollar securities, or carry the right to payment in dollars or sterling at the holder's option.

(*b*) No bonds can be accepted on which dividends or interest have not been regularly paid since the date of issue, and no stock can be accepted unless a dividend of not less than 3% per annum has been regularly paid thereon since January 1, 1913.

(*c*) All securities tendered for sale or deposit must be supported by a statement by a banker, broker, or other responsible party that they have remained in physical possession in the United Kingdom or have been in the ownership of the seller or depositor since September 30, 1914, and that they have not since the outbreak of war been in enemy ownership.

(*d*) Provided that conditions (*a*) (*b*) and (*c*) are satisfied, first-class securities falling within the following categories may be regarded as being, as a rule, likely to be acceptable:—

(i) Any securities quoted on the London Stock Exchange;

(ii) Bonds of the Government of the United States of America;

(iii) Bonds of a State or municipality in the United States of America;

(iv) Securities of a railway company or a public utility company operating in the United States of America;

(v) Canadian Government, provincial, and municipal bonds;

(vi) Canadian railway securities.

(*e*) Bonds and stocks of industrial corporations will not as a rule be acceptable, except in the case of large corporations, such as the United States Steel Trust, &c. Securities not clearly falling within one or other of the categories named under (*d*) above should not be offered to the Treasury except upon the advice of a banker or stockbroker.

2. Forms for submitting lists of securities offered for sale or loan to the Treasury will be placed in the hands of bankers and stockbrokers, and will be provided upon application to the Secretary to the Treasury, c/o The National Debt Commissioners, Old Jewry, London, E.C., to which address any necessary inquiries should be directed. It is particularly requested that such inquiries should be confined within the narrowest possible limits, in order to avoid unessential correspondence. Lists should not be submitted except upon these forms, and the particulars therein asked for should be carefully filled in. Attention is directed to the fact that four distinct forms are provided for use:—

(*a*) For bonds offered for sale;
(*b*) For stocks offered for sale;
(*c*) For bonds offered for deposit on loan;
(*d*) For stocks offered for deposit on loan.

No list should be forwarded before January 1, 1916, and the actual securities should in no case be forwarded until an intimation has been received of the acceptance of an offer and a request made for the accepted securities to be forwarded.

3. All lists totalling less than $25,000 must be submitted through a member of a Stock Exchange, except in the case of insurance and trust companies, whose lists may be submitted direct. The commission to the member of a Stock Exchange will be paid by the Treasury, and no commission will be chargeable by him to his client in respect of transactions under the scheme.

4. In view of the fact that it will not be possible for the Treasury to accept more than a limited amount of securities under the scheme at the present time, it may prove necessary temporarily to withdraw this invitation at any moment.

5. Holders of American securities are requested to remember that, although they are invited primarily to submit suitable securities to the Government under the present scheme, they can still contribute materially towards the achievement of the objects aimed at in the scheme by selling their securities in the open market and reinvesting the proceeds in British Government securities.

MR. ASQUITH'S SPEECH.

The effect of Mr. Asquith's speech on Tuesday was marred by his inability to inform the House of Commons what had been the exact result of Lord Derby's enlistment policy. We are quite aware of the enthusiastic answer that was given to Lord Derby's appeal. And we quite recognise that the difficulty of collecting, tabulating, and accurately making up the total numbers enrolled was exceedingly great. Yet the fact remains that the desire of the country, and of Parliament, is to know what exactly was the response of the young men of fighting age, and whether it will be necessary to take additional steps. In consequence of the impossibility of giving the information the speech fell rather flat. It will be in the recollection of our readers that Parliament voted for the current year a total military force of three millions of men. And the Prime Minister on Tuesday asked for a vote of an additional million, making altogether four millions of men. It is not quite clear whether in this figure of four millions the Indian troops and the troops of the self-governing Dominions, Commonwealths, and Unions are all included. In any case the Government considers that it requires authority to put in the field four millions of men. The speech of the Minister of Munitions on the preceding day gave us so encouraging an account of the great increase that has taken place since the formation of the Department in the supply of all kinds of munitions that no doubt is entertained that we shall be able not merely to supply the four millions of men now being authorised with everything required by them, but we shall be able, likewise, to assist largely our more backward Allies. It is to be recollected that the wastage of the War is very considerable. Four millions of men immensely exceeds any military force that this country has ever hitherto contemplated raising. It might, therefore, be well supposed that when we have Allies who are making great exertions likewise four millions of men ought completely to suffice. But it is to be recollected that the casualties in the War are very heavy. They have been exceedingly heavy hitherto. And we shall be fortunate indeed if they do not become heavier as the War proceeds. And, therefore, every encounter that takes place will lessen the number of men capable of taking their places in the ranks. As a result, it will be necessary to hold very large forces in reserve. And no doubt it is with the desire to lose no time in securing the requisite reserves that Parliament is asked, even before Christmas, to vote so large an additional force as a million of men. The Government, as the speeches of the Prime Minister and the Minister for Munitions adequately prove, at last recognises that the mere number of men with the Colours in itself affects little the real results of the War. In the beginning our military authorities took an altogether wrong view of warfare under present-day conditions, and therefore gave too little thought to munitions and to the full provision of everything necessary to enable the fighting forces to break down the opposition of the enemy. Now the lesson has been fully learned, and we trust that nothing will be allowed which will delay the outturn of the requisite quantity of ammunition. Mr. Lloyd George on Monday seemed rather to indicate that, in spite of all our experience during the past seventeen months, there is a school of influential military men who are not yet convinced that high explosives are above everything requisite, and that, while shrapnel is not to be disregarded, it must cease to be looked upon as more valuable than high explosives. We note with satisfaction the tone of the Prime Minister in this regard. He seems to have clearly realised the mistakes hitherto made, and to be properly anxious for the supply of the right kind of munitions.

Not only is this so, but it appears clear that Ministers have at last fully recognised the indispensable necessity of the Allies acting upon one policy, to which each member of the Alliance will contribute its best efforts. This has been apparent for some time past, and every day we have additional evidence that the true policy is now clearly understood and is being acted upon. So far as our own Government and that of France are concerned, there appears to be no room for doubt that they are in the closest and most constant communication; that they have threshed out all the various problems; and that they are agreed upon a common policy. It is not equally clear that we have succeeded equally well with both Russia and Italy. Russia, it is to be recollected, has not yet supplied herself with the requisite quantity of munitions. Therefore, she may think it necessary to postpone for some time longer a definite decision. But from the speeches of Mr. Asquith and Mr. Lloyd George it is clear that our own outturn of munitions is growing so satisfactorily that we shall be able to assist Russia; while it is notorious that Russia is exerting herself to obtain supplies from every possible quarter. The doubts entertained, therefore, whether the Russian Government is in the same close and constant communication with ourselves and the French as the two latter are with one another are probably based on a misconception. Until Russia feels that she can act with effect she is probably devoting her best attention to the supply of munitions and to preparations for taking up an attitude in accordance with the decision of the Allies. The Russian Army, no doubt, is better able to operate in a Russian winter than the soldiers of the two Central European Empires. Therefore it might be supposed that Russia would take advantage of her superiority in this respect. On the other hand, it would obviously be a mistake if Russia were to enter upon a great offensive movement before she is prepared. We must, therefore, clearly recognise that the true policy for Russia is to secure for herself an adequate supply of the requisite munitions, and that only when she has succeeded in that will she be justified in adopting a great offensive movement. Taking all things into consideration, however, there seems room for believing that the Russians are being very rapidly supplied, and that the time will not be long before they are able to move actively.

We have frequently in these columns called attention to the evidence afforded from time to time that the Germans are becoming much more active than they have been for a considerable time past both in France and in Flanders. That may mean simply that the two Central European Empires have persuaded themselves that their adversaries cannot adopt a very active policy either in France, in Flanders, or in Poland; that, in consequence, they may assemble in the Balkans a larger force than at first seemed likely; and that, therefore, it is desirable from the German point of view to give so much to do to the British and the French in the Western theatre of operations that they will not be in a position to afford large reinforcements either for the Balkans or for Constantinople. However, the evidence seems to be accumulating, whatever the interpretation may be, that the Germans are becoming more active both in France and in Flanders than they have been for a considerable time; and, of course, it is the duty of both France and England to be prepared for such a manœuvre. Meanwhile, it looks as if before long we might expect serious movements in the Near East.

The Russians, fortunately, have gained the upper hand in Persia, and practically have defeated the object of the revolutionaries. Furthermore, the Russian Fleet has again appeared off Varna, and though we hear nothing of a landing, that would seem to indicate that preparations are being made for the invasion of Bulgaria by the Russians. If the Russians really have sufficient supplies of munitions to land a considerable army, the whole aspect of things in the Balkans will rapidly change. The British and the French are steadily receiving reinforcements. They must now have strengthened their position at Salonika sufficiently to defy any attacks either from Bulgarians alone or from these assisted by Germans and Austrians. Consequently, if the Italians from Albania and the Russians from Varna, or any such position, should co-operate in an attack upon Bulgaria we might witness a result that would change the whole aspect of the struggle in the Near East. Some of our contemporaries lament the withdrawal of our troops from Suvla and Anzac, and appear to look upon it as a defeat. To us it appears different. Whether the original landing at Suvla was well- or ill-conceived, or whether it was well- or ill-carried out, we need not now inquire. The information before us, for one thing, is insufficient to justify any conclusion. We had better wait, therefore, for fuller reports than we have yet received. Meantime, we must all recognise that, even if the original conception was a good one, it was not carried out efficiently, and that, consequently, the force landed there was in a falso position, which might become under conceivable circumstances a very difficult one. Therefore it seems to us much wiser to withdraw the forces. Under present circumstances they can be better employed in another position, and they will increase the numbers which can be employed either against the Turks or against the Bulgarians.

A LESSON AND A WARNING.

We feel sure that everybody interested in the War—and who is not?—has read with the utmost attention and care the exceedingly frank and clear speech of Mr. Lloyd George in the House of Commons on Monday. Therefore, we will not waste the time and the patience of our readers by summing up what has been so much better said by the Minister of Munitions. We shall, we think, perform a better service to the country and to our readers if we direct their attention to some of the lessons the speech is so well calculated to inculcate, and draw from them certain conclusions. There are many credulous or invincibly sanguine people who hope that this War will end serious strife among the nations. They tell us, firstly, that war has become too destructive to be engaged in once more, and yet they see before their eyes a growing determination amongst all parties to the present hostilities to see the struggle out to the bitter end. They tell us, again, that the destruction of life, more particularly, will be so great that Germany will not be in a position to renew the struggle for a time so long that we need not look beyond it. Yet if they have ever read even a shallow and brief history of Prussia they must be aware that that is not the Prussian characteristic. When Prussia was a very small German State she conceived the idea of collecting for herself a powerful army, and she succeeded. Again, when the Great Napoleon seemed to be the irresistible master of the Continent, and when Prussia lay helpless under his heel, she did not despair, but began the reforms of Stein and Hardenburg which have resulted in what we see to-day. Furthermore, they tell us that humanity is becoming too civilised. Too civilised, forsooth! when almost every superstition and every evil practice the world has ever known lives and flourishes to-day. We are far from being too civilised. Our great grandchildren, and possibly their great grandchildren also, will not be too civilised to outlive war. No! we have to be prepared for a struggle even more desperate than that which we witness at the present moment. We do not aspire to the character of prophets. We have no wish, therefore, to take upon ourselves the rôle of prediction. But as plain men of the world who note what is passing before our eyes we venture to say that this War, unless the greatest care, the greatest judgment, and the greatest statesmanship are exercised, will lead to other wars still more deadly. For, apart altogether from the feelings that will be left behind by this conflict, we have to bear in mind that the nationality idea which has already played so great a part of Europe is far, indeed, from being satisfied, and that it will break the peace many times before it is completely solved.

Without spending more time in warning our readers that war is not out of date, and will not become out of date during the lifetime of any of them, we would proceed to point out that there is only one certain way of preventing war, and that is by full preparation. Germany conceived the idea, as other Powers were growing too fat and too lazy to make adequate preparations, that she alone had the willingness to spend and the readiness to be spent; and, consequently, that if she prepared she must prevail. She spent a whole generation, to say the least, in preparation. And we see that, though she has failed, she has achieved more than anybody thought possible before the struggle began. Even to-day, nearly seventeen months after the outbreak of hostilities, she occupies nearly all Belgium, a large part of France, and practically the whole of Poland. Therefore, we must show to her, and to such as her who aim at disturbing the peace of the world, that they will find antagonists as well prepared as themselves, and when we do they will think many times before they draw the sword. Germany, as Mr. Lloyd George clearly showed on Monday, had thought out the problems of a great present-day war more carefully and more accurately than her opponents. Therefore, she began with a great superiority over them in munitions of all kinds, and particularly in guns of immense calibre, and in shells of extraordinary explosive character. The main topic of Mr. George's speech was to show what the Department over which he presides has done in little more than six months. He tells us that in a very short time we shall be able to finance munitions at such a rate that even the expenditure in a first-class battle will be made good in a single week. That being so, we are growing superior to Germany, firstly, in the supply of munitions, and, secondly, in the supply of men. There is not, happily, the least necessity for us of the British Empire to keep up a great standing army, because we have learned the lesson that the way to attach all parts of the Empire to all the other parts is to give each and all full self-government. Therefore, we have an Empire which contains between a fifth and a fourth of the whole human race; and we need only to continue the democratic policy which has so raised us and to extend to every part of the Empire as each part becomes fitted such a measure of self-government as it is qualified to exercise wisely. But though we shall need a very small standing army—an army merely sufficient to garrison such parts of the Empire as require garrisoning—we ought to be able to call up such an army as even the most reckless of military States will hesitate to challenge. Our Empire is such that it would be out of the question to raise men by conscription for the purpose of garrisoning all parts of the Empire. But our Empire is, at the same time, such that when danger calls every man is ready to answer the challenge, as we have learned since this War began. Consequently, all that we really need is that the male population of the Empire shall be trained in military exercises during their school time, and that their training shall be kept up by periodical summer manœuvres. So far as men are concerned, that is

enough. If we act with even a little part of the success with which Germany acted we can have trained men sufficient to make any Power in the world, or even a coalition of Powers, think a great many times before it, or they, will decide to attack.

In addition to a military system somewhat resembling the Swiss, and a standing Army raised on the purely voluntary system, as of old, we need two other things, and without them we shall be helpless. The first is a separation of what we may call the Munitions Department from the Military Department altogether. In all our history since the fall of the Stuarts we have never been prepared for war when it came upon us, because our Munitions Department was merely a branch of the War Office, and, like all official Departments, had fallen into the practice of red tape. We want, then, some arrangement which will make the Munitions Department quite independent of the dictation of soldiers; which will be managed by men of science and men of business; and which will hold as its first claim to the confidence of the country efficiency in every particular and at every time. If we have an immense body of trained men all over the Empire ready to fall into the ranks when required, and if we have a Munitions Department prepared fully to supply those men with everything they require for warlike purposes, from gaiter-buttons up to artillery of the greatest power, we shall be in a position that will in all reasonable probability deter even the most audacious from attacking us. Even that, however, is not sufficient, if we desire, firstly, to be able to sleep in our beds in full confidence that no war is threatened; and if, furthermore, we know we are in a position that our prohibition will in all reasonable probability forbid war elsewhere, then, indeed, we may look for a long term of peace. To attain that position, we require an adequate body of highly trained officers, commissioned and non-commissioned. The number of officers that could gain any real experience with such an Army as we have just been sketching out would be totally inadequate, and would have no means of properly acquiring experience. We want a great General Staff as scientific and as efficient as any in the world. And we want, in addition, officers, commissioned and non-commissioned, sufficient to take command of the whole body of men who may be willing to give their services in case of danger. If it were known that the British Empire were equipped in this manner, we might rest confident that war would become a very rare thing indeed. Of course, the pacifists will declare that we are no more to be trusted than the militarist Powers. But the pacifists are either weak-minded persons whose arguments do not deserve consideration, or they are dangerous persons who, under an assumed name, are really pushing an objectionable policy. They are either militarists in real feeling, or they are interested in the manufacture of munitions upon an immense scale, and, therefore, are quite willing that fear of war should remain permanent. Or, lastly, they are people who, calling themselves Liberals or Radicals or Democrats, are really military absolutists, who feel that so long as peace is in danger the party of their real preference will attain power. We must not, then, listen to these insidious workers for an evil policy. We must look the plain facts full in the face, and take such measures as will ensure us that if we are attacked we shall be in a position to defeat the enemy without delay.

CAPITAL.

Just now there is naturally very much discussion by persons, ignorant as well as only partially informed, of the losses that will be occasioned by the great War in which so large a part of the world is engaged. It may be well, therefore, to point out what the losses really will consist of, and what surprising misconception is entertained by persons from whom something better might be expected. Often we are told that the destruction of money will be enormous. If by the word "money" actual currency is meant, this is a complete misconception. There will be no destruction of money save in exceptional cases where accidents of one kind or another may lead to it; but there will be no intentional destruction of money. It is quite true that as soon as the War broke out the two Central European Empires suspended specie payments, and that ever since they have, as far as they could manage it, paid for what they have bought in paper, or the equivalent of paper. Nevertheless, a good deal of gold has gone from the two Central European Empires, and a great deal more will go when peace is concluded. They will have, moreover, to recompense by large indemnities those whom they have so wantonly attacked. It is also true that gold has gone, and is going, from the Entente Allies, and that much more of it will go. But that gold passes from certain countries to other countries does not imply any destruction of the metal. It simply means that, because of extraordinary expenditure, some countries have had to buy on an enormous scale, and others, in consequence, have been able to sell on an enormous scale. There has been, then, and there will continue to be during the War, a large transfer of actual cash from the belligerents to neutrals. There will be a still larger transfer when peace is concluded. We may take it, then, that there will be no destruction of money, as such, because of the hostilities; that if there is any, it will be accidental; but that there will be very large transfers. At the end of the struggle some States will possess much more metallic money than they had at the beginning, and others will possess much less. What is generally included under the phrase "wealth" or "money" that will be destroyed is commodities. There has already been some destruction, no doubt, of shipping; and there will probably be much more before peace is restored. But so far, at all events, the destruction of shipping has been much less than the world was prepared to expect. The real destruction will be, partly, the firing away of munitions that cost immense sums; partly, the wearing out by such firing of great guns which are very expensive to construct; and, partly, of all kinds of commodities that are necessary to feed and maintain armies in the field, and to enable them to fight with one another. The real destruction of wealth, or money, or property, or whatever word the reader prefers, will be the destruction of commodities on a vast scale.

Even that description does not convey the full information that is desired. Great armies and navies have been called out, and are being called out, and will have to be maintained as long as hostilities continue. Therefore, there will have to be an immense outlay in feeding, clothing, and generally in supplying them with everything they want. But against this it has to be borne in mind that these same people would have had to be maintained by some means or other if peace had never been broken. It is not the mere consumption of commodities, therefore, which it is the injurious function of war to destroy, but the use of them for useless purposes. If everything that is being consumed for the purposes of war had been consumed for the purposes of peace, there would be cause for rejoicing, and not for regret. But war consumes what would make the world better and happier, and yet helps to produce nothing to take its place. On the contrary, war withdraws from productive industry a vast proportion of the male population in the very flower of its youth when it is most capable of exertion, and when its intelligence ought to be at the highest. It withdraws this most valuable proportion of mankind for destruction. It stops, to a large extent, useful production. And, therefore, while there is a great destruction of wealth or property, or what you please, there is no proper replacement of

that which has been destroyed by useful production in place of what has been spent. This is the really injurious material influence of war. Houses, railways, roads, bridges, canals, harbours, factories of all kinds—in fact, almost everything permanent that has been created by man and is useful to him—is destroyed as far as the destructive abilities of the belligerents go, and exceedingly little is done to produce what is thus made away with. But if matters stood there, the loss would be comparatively trifling. Nature's beneficence reproduces so much food and raw materials every year that man has the opportunity quickly to replace what has been destroyed. The really material destruction of war is, therefore, lamentable indeed, and inflicts great hardship upon those who are rendered homeless. But it would be only a temporary calamity if nothing further was destroyed.

The worst of all the evils of war, beyond any possible comparison, is not the destruction of valuable material wealth, but the destruction of human life. In this Journal we have frequently pointed out that man is the real wealth of the world; that Nature presents him with exceedingly little that can be used by him in the shape in which he finds it; but that man so transforms what Nature gives him that he turns a useless thing into a useful thing, and makes everything that we call wealth. Now, in the course of this disastrous War, the loss of human life, and especially of the young lives of the men of the various combatant countries, will probably be in excess of anything the world has hitherto seen. The wars that followed the French Revolution lasted for very nearly a quarter of a century and destroyed life upon a colossal scale. But it seems reasonably certain now that the loss of life in the present struggle will be greater than in the Revolutionary and Napoleonic wars. Indeed, it is questionable whether, if the War lasts anything like another year, the excess will not be considerable. Already, while the German Government speaks boldly, and the German Press affects to believe in Germany's ultimate victory, we have unmistakable evidence that Germany has passed the zenith of her fighting power. She can still call out the contingents of 1916 and 1917. But they will be boys with smooth faces. All the older categories have probably by this time been called out, and as fighting continues the reinforcements that Germany will be able to call up will be trifling, while the reinforcements of her enemies will be far larger than they have been heretofore. Germany and German Austria will, therefore, if the War lasts another year, be utterly exhausted, not because railways have been derailed, bridges blown up, tunnels ruined, houses burned, and so on, but because the strong young lives which gave value to all those things are being reduced to clay day by day in frightful numbers. By and by the two Central European Empires will be poor because they will have so few young and capable men. On the part of the Entente Allies the losses will be great. In Serbia, Belgium, and in the occupied parts of France they will be very serious. And they will be considerable in Poland and Galicia. But outside of these localities the losses will not be such as to condemn the countries to a long period of impotence and suffering. There will be a few years, even in our own country, of poverty, not because of the material losses, nor even very greatly because of the loss of life, but because productive industry has been thrown out of gear by the War, while immense new industries have been called into existence. It will be necessary to demobilise the latter and remobilise the former. The process will be slow, painful, and impoverishing. Still, the great Entente Allies will suffer little compared with their enemies. It will not be surprising, indeed, if Germany, Austria-Hungary, Bulgaria, and Turkey retain traces of the destruction brought upon them a hundred years hence.

BANKING PROFITS.

ANOTHER GOOD YEAR.

Probably the year 1915 will prove to be the most profitable period ever enjoyed by British bankers. It is true, of course, that a part of their great profit will have to be utilised for the purpose of writing down their investments, but inasmuch as this process merely means an increase of income in future years in proportion to the amount of profit devoted to this purpose, the sums written off must be regarded as reserved profits. The great sums of profit which bankers have devoted to depreciation in recent years will not only mean a permanent increase in the profits of the banks, but after the War, when prices of securities will recover to much higher figures, bankers will derive the additional advantage of holding securities in their books written down to abnormally low figures.

The great profits of the past year have been gained in part by the profitable rates of interest and in part by the large additions to the deposits of bankers since war began. How much the increase in deposits has been for the whole year is not yet known, but in the six months to the end of June the addition was a long way over £100,000,000, and in the first twelve months after war began the increase in deposits was over £200,000,000. In the past six months the growth of deposits has been much smaller because the Government Loan was used in part for the purpose of making repayment to the Bank of England of previous advances, a process which prevented the deposits of bankers from showing increases corresponding to the amount of money that bankers subscribed to the Loan. It will be remembered that in July the Bank of England was repaid £160,000,000 of money, and that Mr. Asquith announced a further repayment of £104,000,000 up to the beginning of November. Whether any additional sums have been repaid since that date has not been announced, but it is clear that at least £264,000,000 of the last Government Loan has been used to repay former advances by the Bank of England to the Government, and that these repayments have prevented that expansion in credit which otherwise would have been shown and which would have brought about a growth in bankers' deposits corresponding to the expansion in their investments.

In referring to the diminished rate at which deposits have grown in the past six months, we have not mentioned the influence of gold shipments. As far as bankers are concerned, however, the large amount of gold that has been sent away has had no effect upon deposits, as practically the whole of it has come out of circulation. Between June 30 and December 22 the amount of gold in the Bank of England was reduced only £1,000,000, an export of gold on balance of £16,800,000 having been neutralised by the withdrawal of £15,800,000 of gold from circulation in consequence of the replacement of coin in circulation by Currency Notes. Since the end of June the amount of Currency Notes outstanding has increased from £46,577,000 to £97,145,000, or by 51½ millions. This increase has not only prevented gold exports from having any adverse effect upon bankers' deposits, but has prevented the greatly increased demand for cash for internal circulation bringing about any decline in bankers' deposits. Thus, notwithstanding the effect upon bankers' deposits of the cancellation of the abnormal Government credits at the Bank of England in the last six months, bankers' profits have derived advantage from their substantially greater average deposits in 1915 than in 1914. And beyond the greater amount of funds which bankers have had in their possession for employment, the rates of interest have been very profitable. Throughout the whole year the Bank of England rate has been maintained at 5%,

and in the second half-year the Open-market rates of discount have been close to Bank rate, the average rate for three months' bills working out at £4 18*s.* 5*d.* per cent. Moreover, for some months past the value of day-to-day money has been relatively high in consequence of the policy which bankers have pursued in responding to the desire of the Bank of England to keep rates firm. The average rate for day-to-day money has been as high as £3 14*s.* 2*d.* per cent. in the second half-year, against £1 16*s.* 4*d.* per cent. in the previous year, and for the whole year it has been £2 9*s.* 2*d.* per cent., against £1 17*s.* 11*d.* per cent. Approximately bankers pay no interest upon about one-half of their deposits left with them on current account. With regard to the other half, which consists of fixed deposits, interest has to be allowed, and here the advance has been substantial, although not as great as the rise in discount and money rates. For the half-year the average allowance by bankers for deposits at notice was £3 4*s.* 2*d.* per cent., against £2 7*s.* 9*d.* per cent. in the second half of last year, and for the whole year the average rate allowed was £2 12*s.* 1*d.* per cent., against £2 1*s.* 4*d.* per cent. The following comparison of the average rates of interest current in the Money market in the second half of 1915 with those for the corresponding periods of previous years shows clearly that the period has been a very profitable one:—

Average Interest Rates per Cent. per Annum: December Halves.

Half-Year ended Dec. 31	Bank of England Rate	Open-Market Discount Rate 3 Months' Bills	Day-to-Day Money	Deposit Rates—Bankers' at Notice Rates	Deposit Rates—Discount Houses at Notice
	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*

For the year the profit has in proportion not been as substantial as in the second half, for rates early in the year were much lower than they were in the second half-year, as it was not then considered necessary to keep Open-market rates up to the level of the Bank of England rate. The average rates of interest for the whole year in comparison with those for previous years are shown below:—

Average Interest Rates per Cent. per Annum: Whole Year.

Year ended Dec. 31	Bank of England Rate	Open-Market Discount Rate 3 Months' Bills	Day-to-Day Money	Deposit Rates—Bankers' at Notice Rates	Deposit Rates—Discount Houses at Notice

To give a still clearer idea of bankers' profits in the past half-year we set out below a comparison of the rates of interest accruing to bankers, first in respect of the deposits upon which they pay no interest, and, secondly, of the deposits on which they do pay interest both for the December half-year and for the whole year:—

Banks' Margins of Profit, December Half-Year.

	1915	1914	Inc. or Dec.

The discount houses have not been quite as fortunate as bankers. In the first place they have had to pay high rates of interest for day-to-day loans, and in the second the supply of ordinary bank bills has been greatly reduced. Nevertheless, the discount houses should have done fairly well, although probably the expansion in their profits has not been nearly as great in proportion as in banking profits. The margins of profit obtained by the discount houses in the past half-year and year in comparison with 1914 are set out below:—

Margins of Profit obtained by Discount Houses, Dec. Half-Year.

	1915	1914	Inc. or Dec.
	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*

We anticipate that bankers will have no difficulty in maintaining the dividends they paid in the second half of 1914, with perhaps one or two exceptions, where profits have been affected by special circumstances, such as the exceptionally small amount of business transacted on the Stock Exchange. In the first half of 1915 the London County and Westminster, which in normal times enjoys a very large and lucrative Stock Exchange business, reduced its rate of dividend from 21¼% to 18%. In this case doubtless the rate of dividend will again be 18%. The London Joint Stock Bank, which also transacts a very large City business, and whose profits fluctuate with the volume of purely City business, in the first half of the year reduced its rate of dividend from 11% to 10% per annum. Here again the dividend may be again at the rate of 10% per annum. But in spite of these exceptions, due to special influences affecting purely City business at the present time of a very temporary character, Bank dividends should be either maintained at or increased beyond the rates paid in the second half of 1914. For the purpose of showing what the distributions were for the twelve months to June 1915

in comparison with those for former years, we give the following statement:—

	1914-15.	'14.	'13.	'12.	'11.	'10.	'09.	'08.	'07.	'06.	'05.

† *Free of* income tax. ‡ Method of paying divs. changed during year; 1st half *free of*, and 2nd half *less*, tax. (*a*) Div. on old form of shares.

If it be borne in mind that for some years past bankers have been devoting a very substantial part of their profits to capital purposes in writing down the value of their investments and thus increasing the rate of interest upon their investments and upon their total funds, and, further, if the probable recovery in the prices of securities after the War be taken into account, it is evident that banking shares at their current level of price are attractive investments, yielding as they do returns of over 6% from the dividends distributed in the twelve months to June last. In taking account of the yields afforded by the London County and Westminster and the London Joint Stock, it would be well to assume that the dividends distributed in the June half of 1915 will be repeated in January, and that consequently the yields given by the probable rate of dividend may be somewhat less than shown in these two instances. With regard to the other companies, the yields afforded from the dividends distributed in the twelve months to June last give a very fair indication of the yields that will be given by dividends for the year 1915, and we anticipate that in future years the dividends are not likely to fall below those paid for the current year, and will probably show substantial improvement.

"MORATORIUM."—We have received from the Swedish Banks Association a copy of the first part of a work entitled "Moratorium," which is being compiled under the auspices of the Association. The aim and object of the work is to present, so far as possible in the original languages, the legislative measures passed in all the various countries concerning moratoria and subjects closely allied thereto during the progress of the present War. When complete this well-printed and most useful work will embrace three volumes and a supplement. The work can be obtained from Mr. Charles Dickson, Secretary of the Swedish Bankers' Association, Stockholm, who has compiled the work in co-operation with Professor Albert Kôersner.

Financial Notes.

IN the report of the Secretary of the Treasury presented to Congress at its opening, Mr. McAdoo says: "The policy of providing for the expenditures of the Government by taxation and not by bond issues is undoubtedly a sound one, and should be adhered to. A nation no more than an individual can go constantly into debt for current expenditures without eventually impairing credit. A wise, sound, and permanent policy of raising the additional revenue required for preparedness and the expenditures of the Government should therefore be devised and adopted. With the return of peace in Europe the revenues from customs will undoubtedly increase again, and in time a large part of the customs revenues lost in the fiscal year 1915 will be restored. The entire amount of the deficiency, estimated on the basis hereinbefore stated, for the fiscal year 1917, amounting to $112,806,394 (£22,561,279) . . . can easily be raised by internal taxation without appreciable burdens upon the American people."

Later on, Mr. McAdoo observes: "I desire to renew earnestly the recommendation made in my last annual report that the law be changed, so that each person having a *gross* income of $3,000 (£600) or more for the taxable year shall make a return. Under the existing law each person having a *net* income of $3,000 or over for the taxable year is required to make a return. Consequently, the person who has a *gross* income of more than $3,000 makes his own deductions, and determines for himself without any review on the part of the department, whether his *net* income is more or less than $3,000. I feel confident that this change, if made by Congress, will result in a great increase in the number of voluntary income tax returns, and in the amount of revenue that will be collected by the Government. I am of the opinion that it would be very advantageous to have this law amended, so as to do away with the withholding of the income tax at the source, and in place thereof to require information at the source. If such an amendment is adopted, an exception should be made in the case of non-resident aliens whose tax would necessarily be withheld at the source."

Respecting the yield from the income tax, Mr. McAdoo says: "For the fiscal year ended June 30, 1915, the total receipts from personal income tax were $41,046,162 (£8,209,232), an increase of $12,792,627 (£2,558,525) over the preceding year. The total receipts from corporation income tax for the fiscal year ended June 30, 1915, were $39,144,532 (£7,828,906), a decrease of $3,983,208 (£796,642). The increase in the personal income tax receipts was due in great measure to the fact that the collections for the fiscal year 1915 were for a period of twelve months, whereas the collections for the fiscal year 1914 were for ten months."

The total estimated appropriations for the fiscal year beginning with July next Mr. McAdoo put at £257,171,562, including £63,272,976 for the post office, which is reimbursible, and about 18 millions sterling more for the Panama Canal and sinking fund. Receipts for the same year, based on existing law, without extension of the sugar duty or the emergency tax, Mr. McAdoo puts at £116,040,000, and ordinary disbursements at £166,580,200, leaving an excess of expenditure over income, if legislation is not passed to change conditions, of £50,540,200. If, however, the emergency and the sugar tax laws were extended, Mr. McAdoo admits that the deficit will be reduced to about 10 millions sterling.

At a recent meeting of the International Trade Conference a recommendation by the Committee on Banking and Currency of the National Association of Manufacturers was made in favour of the establishment of an independent bank to serve American foreign trade. The Committee proposed that the bank should receive no deposits, and should not interfere in the least with domestic banking affairs. Its business, in the opinion of the Committee, ought to be to buy drafts against bills of lading; to collect drafts and accounts in and from foreign centres; to advance money on foreign accounts; to issue drafts and letters of credit; and to accept drafts against shipments or collections. The Committee argued in support of their recommendation that the banks, as they existed before the recent banking law, could not have fulfilled the functions which they wished to see carried out. They could not have stimulated business between the United States and foreign countries, inasmuch as their functions would have been to take care of themselves more than to protect foreign accounts, thereby inducing exporting interests to extend credit everywhere.

There seems to be no doubt that Peru will obtain a loan in the United States. The amount is not yet fixed, but the well-informed anticipate that it will be about three or four millions sterling. That is a handsome sum, and will help the little Republic, though, of course, it will not make matters quite smooth regarding the public debt. But it is anticipated by those who know the country well that an earnest effort will be made to reform, and increase taxation, and so to put themselves right with their creditors. The Peruvian Government in past times was not as well manned as it might have been, which was a cause of much of the troubles of the country. The present President, however, is a capable and statesmanlike President, and much is hoped from his administration.

"La Guerre de 1914 vue en son Cours chaque Semaine." Deuxième édition. This is a record of the War week by week from its commencement to the end of July 1915, and brings under one cover the series of articles by M. Paul Leroy-Beaulieu which have appeared in *L'Economiste français*. Price 3*f*. 50c. (Paris: Librairie Delagrave, 15 rue Soufflot.)

U.S. FOREIGN TRADE.

Always in the Fall of the year America's exports are large, and greatly exceed the value of her imports. In a normal year the great exports in the autumn months are needed to liquidate debt to other countries, incurred through the generous expenditures of American tourists in the spring and summer. The money expended by tourists is, in fact, borrowed abroad until it is provided by exports of produce after the harvest is gathered in. But in these war times American visitors to Europe and to other countries are few and far between. Consequently, Europe has not even the usual means of paying for the food and raw material it is importing in such great quantities, and has to make payment in gold or in securities. In October America's exports were valued at as much as $334,600,000, and her imports at no more than $148,500,000. There was thus an excess of exports over imports of $186,100,000. In November, a slightly shorter month, America's exports have been worth no less than $331,100,000, or even more per day than in October. Fortunately imports expanded substantially, and were worth $164,300,000. But the excess of exports over imports was still as much as $166,826,000. In two months, therefore, the excess of exports over imports amounted to the great total of $350,000,000, or £70,000,000. On the other hand, the amount of invisible imports, which in an ordinary year would have been nearly enough to

settle this great balance, was exceptionally small. Probably America's invisible imports in the shape of interest that has to be paid upon foreign capital invested in the country, gifts to friends, insurance, &c., are now not more than $400,000,000 a year, or less than $35,000,000 a month, so that on balance for the two months other countries had to find exchange to the extent of nearly $280,000,000, or £56,000,000. In October the imports of gold into the Unifed States amounted to nearly $77,000,000, or over £15,000,000, and probably another £15,000,000 was received in November. This left a balance of about $200,000,000, or £40,000,000 to be met by sales of securities, bankers' credits, &c. Some of this money was provided by the sale of American securities by British holders, and the balance was supplied out of the £100,000,000 Anglo-French loan.

For the twelve months to the end of November the exports of the United States have been worth no less than $3,443,000,000, while the imports have been no more than $1,729,000,000. There has thus been an excess of exports over imports of $1,714,000,000, or about £350,000,000. For the calendar year 1915 America's exports will probably reach nearly $3,530,000,000, while her imports may be £1,780,000,000, and the excess of exports over imports may be $1,750,000,000. Deducting from this sum about $400,000,000 for interest, freights, &c., due to Europe, the balance in favour of America has been $1,350,000,000. Of this amount America has claimed payment as to about $420,000,000 in gold, and the balance of $930,000,000 has been received in securities of one kind or another. During the current calendar year the amount of Canadian securities purchased by the United States is about $140,000,000, while the amount of foreign securities, other than Canadian, is $621,000,000, of which $530,000,000 was for Great Britain and France, leaving $91,000,000 for other countries. Of the latter amount about $40,000,000 was for Argentina, $25,000,000 for Italy, $15,000,000 for Switzerland, and $10,000,000 for Germany. The total amount of the publicly issued loans is $760,000,000.

Beyond the public loans substantial quantities of American securities have been re-sold to New York by British insurance companies and others. But it is obvious that the total amount of money raised in America by France and Great Britain in the past year by loan and by sales of securities does not exceed $700,000,000, or £140,000,000. America's foreign trade for the year 1915 was approximately as follows:

America's Foreign Trade Balance in 1915.

	$
Exports	3,530,000,000
Imports	1,780,000,000
Excess of exports	1,750,000,000
Imports of gold	420,000,000
Net exports	1,330,000,000
Deduct:—	
Interest, freight, insurance, gifts to friends, etc.	400,000,000
Net exports	930,000,000

,, ,, France	*290,000,000
,, ,, England	*240,000,000
,, ,, Italy	25,000,000
,, ,, Germany	10,000,000
,, ,, Switzerland	15,000,000
,, ,, Argentina	40,000,000
,, ,, Bolivia	1,000,000
Total loans	761,000,000
Balance	169,000,000

The whole of these sums will not be remitted in 1915, and the balance adjusted by sales of American securities by British investors is substantially greater than $169,000,000.

In 1916 the situation should be still more favourable. Not only were American crops this year abundant, but the country's exports of manufactured goods are rapidly expanding, and we should not be surprised if the excess of exports next year exceeded $2,000,000,000, or £400,000,000. With such a vast quantity of gold in the United States the country will not need to take payment for any part of its exports in gold, and after allowing for its remittances for interest, &c., the amount of securities it will be able to purchase may be in the neighbourhood of $1,600,000,000, or £320,000,000. Doubtless Europe will meet a large part of its purchases by sales of American securities, but it is obvious that American investors will also be in a position to make direct loans to France and Great Britain in the coming year for a much greater sum than the $530,000,000 supplied in 1915.

The enormous value of America's exports in November and the great excess of exports over imports are shown by the following comparison:—

Merchandise (November).

	1915	1914	Inc. or Dec
	$	$	$
Imports	164,319,000	126,467,000	+ 37,852,000
Exports	331,145,000	205,878,000	+125,267,000
Excess of Exp.	166,826,000	79,411,000	+ 87,415,000

The growth of America's exports month by month, and the smallness of the imports since the War commenced, will be evident from the following statements:—

Merchandise Exports from and Imports into the United States.

RAILROAD REGULATION.

HOW CAN IT BE STRENGTHENED?

THE difficulties of American railroads in the matter of both Federal and State regulation were recently discussed by Mr. A. J. County, of the Pennsylvania Railroad, in a most instructive address at the University of Pennsylvania.

After reviewing the advantages and disadvantages of Public Regulation, and emphasising the different status the railroads occupied from other industries, and the necessity for changes in the present regulatory policy, Mr. County presented the following questions and recommendations to business men, statesmen and the public:—

(1) Federal incorporation or some constructive national legislation to free the interstate common carriers from the confusion, delay and expense of State and local regulation, plus Federal regulation.

(2) That the overburdened Interstate Commerce Commission be strengthened by establishing Regional or District Commissions to accommodate the public and facilitate conclusions in rate hearings and other transportation questions, just the same as the country's financing under the Federal Reserve Banking System has been divided into regional or district banks, and similarly the Interstate Commerce Commission has distributed its own railroad valuation work. These commissions, of course, to be subordinate to the Federal Commission located at Washington.

(3) That the Federal Commission should control all rates and practices, having the power to increase rates it regards as non-compensatory, and to prevent reductions in rates it believes to be reasonable.

(4) That the Federal Commission should regulate compensation for carrying the mails and parcels post.

(5) That the duties of detection and prosecution should be separated from the Federal Commission's other functions.

(6) That a longer term of office and greater compensation be paid the Federal Commissioners for one of the most arduous and responsible tasks in the country.

(7) That the Interstate Commerce Commission regulate the issue of railroad securities through a system of publicity such as that advocated by the Hadley Commission. Mr. County regards the present power of the Federal Commission to be almost sufficient to give all necessary public information about these securities, the purposes for which they are issued and for which the proceeds will be used. The only weak point is that such Federal review and publicity would not relieve the railroads from still applying to various State Commissions to approve security issues;

(8) That National and State laws define the duties of Public Service Commissions to be not chiefly correcting and punitive agencies, but agencies to consider and strengthen the position of the common carriers of the country, just the same as the public expect from Governmental Departments dealing with Agriculture and Banking;

(9) The duplication of reports and information—Federal and State—and also for the various departments of the State and Federal Government, with the consequent expense, should be eliminated by conference between the State and Federal Commissions. This includes a repetition of the same character of information year by year.

(10) That railroads must not be regarded as finished works like a bank building or reservoir, and that if the vast undeveloped areas and natural resources of the country are to be opened up, the carriers must have public support;

(11) That Public Regulation should see that no obstacle in business or politics shall exist to discourage private capital from railroad investments. Otherwise the country will be forced to serious economic changes;

(12) That a return on Property Investment in 1913 of 4.87% and of less than 4% in 1914 is not a reasonable return, and is not sufficient encouragement for private capital to continue to flow into railroad enterprises;

Mr. County expects a national conception to be awakened as to what these interstate transportation systems require to make and keep them growing and prosperous, and that, recognising them as the ablest instruments of national prosperity and peace or war, will constructively legislate for them. He expects that just as by the provisions of the National Constitution the trade of the country was freed from State restrictions, and the country has free trade between the States, so the time has come when the railroads, as national instrumentalities for carrying that same national commerce, will, by liberal Public Regulation, be freed from the confusion and expense of over forty different State legislative bodies and commissions, and be subject to one governing body—the Federal Government—and again become the advance guards of progress and prosperity.

ENTRE RIOS RAILWAYS.

Quite a cheerful note was sounded by the Chairman of the Entre Rios Railways Company at the recent meeting. After reviewing the unsatisfactory results of the past twelve months, and referring to the great disadvantages under which the Company has worked for several years, Mr. Follett Holt called attention to the several favourable features in the situation. As he rightly pointed out, it was most unfortunate that the completion of the Company's extension and betterment programme, entailing as it has a large expenditure of capital, should have been followed, first by a period of acute depression in Argentina, and then by the War. But the country is rapidly recovering from its difficulties, and the Company, having completely put its house in order, is in a position to take full advantage of the better times now in store.

With the Company's heavy capital expenditures practically at an end it is interesting to note that the capital cost per mile only slightly exceeds £10,000. This compares favourably with that of other important lines in the Republic, where in some cases the capital cost works out at nearly £17,000 per mile, or 70% higher than that of the Entre Rios Railways. In the particular case referred to, which is one of the most sound and deservedly prosperous railways in the Republic, Mr. Follett Holt, speaking with intimate knowledge of the position, stated that, "mile for mile, I doubt if the capacity for production of the one zone averages any better than that of the other, but the great difference in the prosperity of the two companies to-day lies in the fact that the lands in the zone of the one are better cultivated and more developed than those of the other. To improve our position in this respect our extension to Buenos Ayres has been and will be of the greatest service, as it has opened up our province to new settlers and new energies, and under this influence I have no doubt whatever that the density of our traffic per mile will continue to expand in the coming years until it approximates to that of the prosperous companies in the Argentine, and that our comparatively low capital cost will not fail to count in favour of our shareholders." The following telegram from the General Manager, dated December 7, was read at the meeting: "Cattle traffic continues strong. Fourteen thousand tons of oranges have been carried since last July, the increase coming from Paraguay. Prospects cattle good and camps excellent; harvesting active; every indication record crop. Demand general goods increasing. Traffic outlook generally brighter."

The increase in earnings up to date amounts to £44,800 or 23%.

"Trust Companies of the United States."—The 1915 edition of the annual publication of trust-companies statistics, issued by the United States Mortgage and Trust Company, New York, recently published, contains the names of 2,031 trust companies; and in addition to the statements of condition of 1,777 trust companies throughout the country, it includes lists of officers and directors of the various companies, together with stock quotations, dividend rates, &c. On June 30, 1908, the total resources of trust companies were reported as $3,917,442,000, while the figures for June 30, 1915, are reported as $6,328,454,000, showing a gain of over 61%. Trust company resources are now nearly 54% of the resources of National Banks, reported on June 23 1915, as $11,795,000,000.

CUBAN-AMERICAN SUGAR.

COMMENTING on the position of this Company in January last, we pointed out that there were considerable probabilities that the twelve months to September 1915 would be the most prosperous in the history of the Company, and that there were strong grounds for anticipating that the Preference shareholders would receive the whole of the arrears of dividend on the stock. The report for the past fiscal year, received on this side this week, shows that the anticipation of twelve months ago has been more than realised, and not only have the Preference arrears been wiped out, but the Company has been able to make a distribution on its Common stock.

In its present form this Company dates back to 1906, when it was incorporated for the purpose of amalgamating businesses carried on by five independent companies engaged in cultivating sugar-cane and manufacturing raw and refined sugar in the Island of Cuba. In 1908 another business was acquired, and in 1910 one other company was taken over. The Cuban-American Sugar Company operates the largest sugar-producing business in Cuba, and its importance may be gathered from the fact that it has an authorised share capital of $20,000,000, of which $15,029,400 have been issued, while there are also outstanding Collateral Trust bonds to a total of $9,116,000. The property owned by the Company includes 325,000 acres of land and 225 miles of railroad.

The results for the year to September 30, 1914, were obtained at prices ranging below the average selling prices for the previous five years, a very small proportion of the output remaining being available for disposal at the higher prices ranging in August and September 1914, but for the past fiscal year the Company has received the benefit of the higher prices prevailing for the whole of its crop. Owing to unseasonable weather conditions during the grinding season, especially in the eastern provinces, the yield of sugar from a ton of cane was approximately 10% less than in the previous year, so that while the amount of cane ground was 2,218,168 tons, as compared with 2,213,723 tons, the output of raw sugar was only 236,401 tons (of 2,000 lb.), as compared with 264,745 tons for the previous year. The refined sugar production from the two refineries owned by the Company amounted to 169,667,626 lb., as compared with 147,448,185 lb. for the previous year.

The gross sugar sales for the twelve months brought in $22,502,285, as compared with $14,808,378 for the previous year, an increase of 50%. The sales from molasses brought in $511,803, as compared with $455,011, and miscellaneous income amounted to $352,537, as compared with $296,709, so that the gross income of the Company rose from $15,560,098 to $23,366,625. The expenses rose from $11,113,386 to $16,156,102, so that there was a balance of $7,210,523, as compared with $4,446,712. The directors have taken advantage of the great prosperity by setting aside a sum of $2,000,000 to the depreciation reserve, in addition to the usual amount written off, calling for $788,497. Provision being made for bond discounts and interest, &c., there is a net profit for the year of $3,594,048, and after providing for sinking fund, &c., the whole of the Preference arrears of dividend, calling for $1,105,132, is wiped out, and there is a surplus of $2,391,633, which is added to the sum brought forward, making a total of $6,285,790. Consequently, on November 17 a quarterly dividend of 2½% was declared on the Common stock, payable on January 3 next. Herewith we set out in detail the manner of dividing the profits for each of the past three years:—

Year ended Sept. 30—	1915	1914	1913
	$	$	$
Sugar proceeds	22,502,285	14,808,378	15,045,573
Molasses	511,803	455,011	303,451

* After allowing for special appropriation for depreciation of buildings, &c.

In detail, the tonnage ground and the annual production of raw and refined sugar for the past three years have been as follows:—

	1914–15	1913–14	1912–13
	Tons	Tons	Tons
Cane ground (tons 2,000 lb.)	2,218,168	2,213,723	1,956,723
Raw Sugar Production—			
(Bags 320 lb.)	Bags	Bags	Bags
Chaparra	525,088	616,179	475,373
Delicias	315,872	492,662	327,438
Tinguaro	236,956	197,240	216,084
Unidad	84,472	66,606	96,816
Mercedita	93,617	88,447	104,836
Constancia	196,055	162,861	120,365
Gramercy, La.	25,447	30,663	22,380
Total	1,477,507 or (Tons) 236,401	1,654,658 or (Tons) 264,745	1,363,292 or (Tons) 218,127
	Lb.	Lb.	Lb.
Refined Sugar Production—			
Cardenas Refinery, Cuba	14,713,144	13,043,392	7,746,155
Gramercy Refinery, La.	154,954,482	134,404,793	123,058,425

The total capital expenditure during the past twelve months has amounted to $1,175,491, the expenditure being made to provide the most approved and necessary devices that may be employed to increase the yield of sugar and lower the cost of production, also to acquire about 35,000 acres of virgin land and construct additional railway lines and equipment in order to care for the increased tonnage of cane and its products. The total assets are valued at $39,893,096, of which the property, plant, &c., stand at $25,529,096. Goodwill is valued at $3,929,340. As against this, however, as already indicated, a large surplus has been accumulated. Herewith we summarise the liabilities and assets as at September 30 last.

LIABILITIES.	$	ASSETS.	$
Common stock	7,135,600	Property, plant	25,529,666
7% Cum. Preferred stock...	7,893,800	Goodwill	3,[illegible]
Com. Stk. Colonial Sugars Company	3,100	Investments in Subsidiary Companies	3,100
Collateral Trust Bonds ...	9,116,[illegible]	Work animals, live stock, &c.	751,506
Real estate morts. ...	574,111	Current assets	9,293,069
Current liabilities	3,[illegible]	Deferred charges	386,415
Sinking fund redemption ...	138,142		
Reserve for depreciation ...	5,370,310		
Surplus	[illegible]		
	39,893,096		39,893,096

Extensive new plantings have been made during the past twelve months and a large acreage brought under a system of irrigation, so that, the report points out "our fields to-day indicate a tonnage for the ensuing season of unequalled proportions, assuring a record production and a confident outlook for a prosperous year." As indicated, the Common stock has now been placed on a 10% basis. The undivided surplus at September 30 was $6,285,790; 10% on the Common stock will only call for $713,560, so that it is amply covered. It may be anticipated that the prosperity of the current year will again be taken advantage of by the board to strengthen the financial condition, so that the Company may be placed in the best possible position to meet future competition. In January last the price of the Common stock was $28; it is now $164, at which figure on a 10% basis a yield of just over 6% is forthcoming. On the Preferred stock a return of 6½% may be secured, and on the 6% Collateral Trust bonds the yield is nearly 5⅝%.

Particulars of capital, prices, dividends, and yields are appended:—

Amount	Description	Par	Price	Div.	Yield
$		$	$	%	£ s. d.
9,116,000	6% Collateral Trust bonds ...	1,000	107¼	6	5 11 10
7,893,800	7% Cum. Preferred	100	167	7	6 10 10
7,135,600	Common stock	100	164	10	6 1 11

MEXICAN RAILWAY.

The Mexican Railway was taken over by General Carranza on November 18, 1914, and all applications made for its return have been refused on account of military necessities. Consequently the accounts now presented are in respect of the half-year to December 31, 1914, and cover a period of four and a half months only. The net results are already well known, but the details of working made public this week for the first time are interesting as showing the disastrous effect upon the Company's prosperity of the deplorable conditions then existing in Mexico. The gross receipts decreased $646,000, or 13%; whilst working expenses were raised by $352,000, or 14%, and the net earnings declined $998,000, or over 40%. In part explanation of the increase in expenses it is pointed out that all stores used on the line being kept on a gold basis, the number of dollars charged to operating expenses is considerably increased owing to the great fall in the rate of exchange. The average sterling value of the dollar was, indeed, only 10.372*d.*, as compared with 17.768*d.* in the corresponding half of 1913. This, of course, also explains the further heavy loss on conversion of currency receipts into sterling, the total net income for the half-year coming out at only £41,000, as against £154,000. This was insufficient by £20,000 of the sum needed to pay the half-yearly coupon on the Company's 6% Debenture stock, and an arrangement was come to whereby interest payments for this and next year on both the 6% Debenture stock and the 4½% Second Debentures are being funded as they fall due. The scheme provided that the directors shall have power during the period of suspension to defer payment of interest and to issue certificates in lieu thereof. These certificates, which bear interest at the rate of 6% and 4½% respectively, will be payable in cash on January 1, 1917, in the case of the 6% Perpetual Debenture stock and on April 1, 1917, in the case of the 4½% Debentures. The directors have power at any time to redeem the certificates at their face value, with interest added to date of payment The sinking fund for the Second Debentures is likewise suspended for the period of the scheme.

The income statement of the Company for the half-year is appended:

* Placed to reserve.

Although the total number of passengers carried shows a decrease of 168,935, the receipts therefrom increased $139,363, principally through the extensive military-train movement made for the Mexican Government; and express traffic receipts increased $113,414 owing to the greater use made of this service on account of the delays to freight traffic. The total increase from passenger-train traffic amounted to $252,777. On the other hand, both in tonnage and revenue, goods traffic shows heavy decrease; national goods declined 81,360 tons and produced $255,609 less revenue, whilst foreign goods were smaller in quantity by 38,563 tons and in receipts by no less than $780,810.

For the whole of 1914 the Company earned a surplus in excess of charges of £27,389, the profit for the first six months having been £50,714, the whole of which was transferred to reserve. This, however, contrasts with a profit of £238,010 earned in 1913 and £337,022 in 1912, so that the set-back in the Company's prosperity up to the time the line was taken by the Government was very severe. The following is the income statement of the Company for the last four years:—

Mexican Railway.

Year—	1914	1913	1912	1911
	$ Mex.	$ Mex.	$ Mex.	$ Mex.

There are at last indications that Mexican politics are steadily righting themselves. Although nothing definite is known as to the immediate future, the recent recognition by the United States Government of General Carranza is undoubtedly an important step towards the restoration of normal conditions in the country, especially as it has been followed by the formal recognition of the *de facto* Government of the Republic by most European countries, including the British Government. Moreover, the report received this week that General Villa had decided to abandon

the revolution, and intends to seek asylum in the United States or in Europe, is another hopeful sign, as it means the removal of a disturbing element which has been one of the chief causes of the long-standing political troubles in Mexico. It would appear, therefore, that serious efforts are at length being made to bring about a peaceful settlement of all outstanding difficulties, and although it may take some little time to completely restore confidence in the country, the position at the moment is certainly more hopeful than it has been for a long while past. The revolution has now lasted for upwards of five years. In its early stages the Mexican Railway Company did well by reason of the fact that Vera Cruz was practically the only port open to business, and a good deal of traffic which in ordinary circumstances would have been forwarded by other routes was diverted to Vera Cruz over the Mexican Railway system. It was, therefore, not until about two years ago that the disturbed conditions of the country really began to be felt, and, whilst during this period the set-back has doubtless been severe, the marked improvements made by the Company in recent years, both physically and financially, is a clear indication that with peace once more restored in Mexico the process of recuperation will be rapid, and that, given normal conditions, renewed prosperity will be quickly apparent. The following retrospect of the main results of working for the past 12 years is instructive as showing the progress made by the Company in recent times:—

Mexican Railway.

Year	Gross Earnings Mex. $	Expenses Mex. $	Ratio %	Net Earnings Mex. $	Aver. Exchange d.	Sterling Net Earnings £
1914 ...	8,876,000	5,551,000	62·54	3,325,000	13·25	164,000
1913 ...	9,792,000	4,785,000	48·86	5,007,000	20·14	386,000
1912 ...	8,715,000	4,021,000	46·14	4,694,000	24·50	479,000
1911 ...	8,428,000	4,045,000	47·99	4,383,000	24·50	448,000
1910 ...	8,448,000	4,311,000	51·01	4,137,000	24·50	424,000
1909 ...	7,623,000	4,088,000	53·62	3,535,000	24·50	361,000
1908 ...	7,386,000	4,513,000	61·10	2,873,000	24·53	294,000
1907 ...	8,034,000	4,595,000	57·19	3,439,000	24·60	353,000
1906 ...	7,111,000	3,821,000	53·73	3,290,000	24·82	340,000
1905 ...	6,293,000	3,763,000	59·79	2,530,000	24·42	258,000
1904 ...	6,104,000	3,489,000	57·16	2,615,000	22·74	252,000
1903 ...	5,516,000	3,320,000	60·18	2,196,000	20·72	191,000

Unfortunately the condition of the property at the moment is anything but good. During the past twelve months, the directors state, the districts served by the line have been in a disturbed state, and considerable damage has been done to the buildings and the rolling-stock. General Carranza controls the main line, Puebla and Pachuca branches, and a service is being run over this part of the system. Seventeen stations have been burnt or otherwise damaged, but no serious injury has been done to the permanent way. The rolling-stock has been allowed to get into a deplorable condition; some is destroyed, and a portion is being used for military operations in the northern part of the Republic. Whilst all this is of course very unsatisfactory, it should be borne in mind that the Carranza Government has promised to indemnify the Companies against loss arising out of the revolution, and has agreed to replace at the cost of the nation whatever railway material is destroyed as a result of political disturbances. The main consideration at the moment, therefore, is the probable early resumption of normal conditions throughout the country and the restoration of the railway to the Company.

Prices of the Company's securities have recovered from the lowest points touched, and the latest quotations are nominally as under:—

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY.

THE annual report of this Society deals with the year ended June 30, and, owing to this incidence of date, is the last report of any British life office published in 1915. The period covered by the operations includes eleven months of warfare, and the circumstances arising from this condition must have affected the Society's accounts more than those of similar institutions which, for the most part, related to the calendar year 1914. Seeing that the Society's head office and agency staff had been seriously depleted, and that the popular demand for new assurances had greatly decreased, a considerable fall in new business was naturally to be expected. New assurances for £965,345 are, however, reported. Some of them must have been for large amounts, as reassurances were effected to the extent of £292,613. The net retention at the sole risk of the Society was £672,732, as compared with £1,093,798 in 1913-14, when the new business exceeded that of any previous year in the Society's experience. Some expansion of business in force is shown, for the total net premium income, amounting to £448,967, shows an increase of £10,901. A diminished new business in itself tends towards a reduction in the expense ratio, though this may have been counteracted to some extent by increased clerical expenses, for to the salaries of assistants serving with the Colours have to be added those of temporary substitutes. Thirty-nine members of the staff are reported to have been engaged in military or naval service, and the board report, with deep regret, that five of this number have been killed in action. Consideration received for new annuities granted amounted to £30,529. Allowing for the cost of the annuity business, the expenses of management, inclusive of commission, represented £12 1*s.* 5*d.* per cent. of the premium income, as compared with £13 4*s.* 2*d.* per cent. in the preceding year. The proportion is only about two-thirds of the margin of premiums in force at the date of the last valuation then reserved for costs and contingencies, so that a profit from economical working is manifest. The death claim experience during the year was heavier than usual, for the amount paid in this way, £349,052, included claims for £65,417 directly due to the war. Yet it is reported that the total payments through deaths from all causes were well within the amount

expected, and that a moderate mortality profit actually accrued. Care in selection of lives and in adjustment of premium rates to meet under-average cases, which the Society has always been ready to consider, has resulted in the past in a large profit of this description. The board includes a strong infusion of the skilled medical element.

Through the year's operations the life assurance fund was increased by £222,270 to £6,223,406. The gross interest yield during the year was £4 4*s.* 6*d.* per cent., and the net yield, after deduction of income tax, was £3 17*s.* 1*d.* per cent. Compared with the corresponding figures of 1913-14, the gross yield shows a slight increase, but the net yield is diminished by 2*s.* 4*d.* per cent., owing to the heavier rate of income tax. The rate of interest assumed by the Society at the last quinquennial valuation was £2 10*s.* per cent., so that more than one-third of the net interest earnings of the year may be regarded as accruing profit.

The next quinquennial valuation is due on June 30, 1916. It is evident that so far very satisfactory profits have accrued from all the sources which go to the manufacture of bonus, and under ordinary circumstances there would be no doubt as to the maintenance of the very high standards of profit which have always distinguished the Society's distributions. But in these days it does not do to prophesy, and all that can be said on the matter may be expressed in the words of the Chairman at the annual meeting: "If we cannot pay a good bonus I really don't know any office who can."

So far the question of depreciation seems to be within manageable proportions, though much will depend on the condition of the Stock markets at the valuation date. The Chairman estimated the depreciation at the close of the last financial year as being under £250,000, which represented only about 4% of the total assets. As against this, the Society seems to have been at the last investigation in possession of reserves of nearly equal amount, apart from those required by the ordinary valuation standards. Thus there is a bonus reserve fund of £150,000, and a permanent reserve fund of £50,000, while on revaluation the Society's head office premises would show an increase in value, not yet taken credit for, of over £30,000. Meanwhile the last 2½% net premium valuation is the sheet-anchor of the financial position. If it were thought necessary for the maintenance of the bonus standard to adopt a less severe method of valuation, under the circumstance that for a good many years to come the Society may fairly hope to earn at least 3¾% on its investments, the step would be justified in the interests of the older class of policyholders, but it is not at all clear at present that any change of this kind will be called for.

The Society's participating system, looking to the bonus possibilities not of the next valuation alone, but of future investigations, seems to retain its full attraction for new entrants; but to such of the public as are disposed, owing to the uncertainties of the moment, to favour the non-participating plan, it may be pointed out that the Society's rates for without-profits policies are amongst the lowest quoted by British life offices. The Society now charges equivalent rates for non-profit and for discounted bonus policies. In the former case the contract is definitely fixed for an unalterable amount. The latter method has a mildly speculative element, for the sum assured under the discounted bonus plan is subject to diminution in the presently unlikely contingency of actual bonuses being less than those anticipated, whilst in the contrary event being realised the sum assured would be increased correspondingly.

Attention is drawn to two new features. One, of a temporary character, relates to new policies on the lives of persons who may be engaged in war service beyond the limits of the United Kingdom. It is difficult now for any such person to obtain a policy of assurance on any acceptable terms, for, unfortunately, the mortality from the present war has greatly exceeded that of all previous campaigns. The directors of this Society, under these circumstances, offer a policy with a special clause inserted in it, providing that if the assured engage in war service abroad he shall continue to pay the ordinary annual premium, but that the policy shall be in suspense until demobilisation takes place at the end of the present hostilities. Thus the full sum assured will be no longer payable. If, however, the assured should die before demobilisation, while the policy is still in suspense, a return of twice the premiums paid will be made. The special clause will also provide that on demobilisation the life assured shall produce evidence to the directors as to his health, future residence, and occupation. If this be satisfactory, the policy will then become whole world and unconditional, and will enjoy all advantages of bonus, surrender value, &c., as from the original date of entry. If, however, the assurance should not then be acceptable at the ordinary rate of premium, the Society guarantees to return twice the premiums paid, in the form of a special surrender value. It will be seen that under this scheme no loss through death or invalidity caused by the War can be made by the policyholder or his representatives, but, on the contrary, a profit of 100% will stand to his credit.

The new children's deferred assurance scheme provides a policy commencing at a stipulated age, such as 21 or 25 in the case of a healthy child. The premiums paid before the attainment of the age agreed upon are returnable in the event of the death of the child. For a comparatively small premium large benefits are obtainable, carrying valuable options. Thus in the case of a healthy child aged one next birthday an annual premium of £5 will provide an assurance commencing at age 25 of £750, while £50 per annum will provide £7,500. For a description of the various options reference should be made to the Society's explanatory leaflet.

EMPLOYERS' LIABILITY ASSURANCE CORPORATION.

Our attention has been drawn to the fact that in the Table which appeared last week on page 764, headed "Financial Strength of the Accident Offices," we did an injustice to the above-named important Company by not including the general and investment reserve funds in the column giving the funds, exclusive of capital, at the end of 1914. The latter were stated as £1,255,000, whereas their total should have been £1,785,000, and their percentage to premium income not 65% but 92%.

HORDEN COLLIERIES, LIMITED.

In December last it was pointed out that a total of over 1,000 out of about 5,200 men employed by the Horden Collieries had joined the Army. This number has been considerably increased during the past twelve months, and since the outbreak of war nearly 2,000 have joined the Forces. This has naturally had a twofold effect. It has reduced the output and has added materially to the cost of coal-getting. For 1914 the output of the Company was 1,346,595 tons, and under normal conditions during the twelve months to September 1915 the output would probably have reached at least 1,500,000 tons, but owing to the shortage of labour the actual output was only 1,075,235 tons. When the development of the collieries is completed the total capacity of output will be something like 2,500,000 tons. Consequently, with the Company so handicapped in the matter of production, it is not surprising to find that the profits for the twelve months to September 30, 1915, show a falling-off as compared with each of the two previous years. Nevertheless, in all the circumstances, the fact that the profits have only fallen from £128,848 in

1914 to £102,503 in 1915 may be considered distinctly satisfactory.

The net additions to capital expenditure in the past year have amounted to £93,651, and there has been written off £102,571, so that the net amount of the expenditure at September 30, 1915, was £1,566,558, as compared with £1,575,478 twelve months previously. The development of the Horden Colliery is complete, and Shotton Colliery, with its coke works, is also a complete undertaking; the Blackhall Colliery is still in the process of development, but it has reached full development so nearly that the directors think that any further expenditure in development may be debited to working expenses, and the board is disposed to regard these three capital accounts as closed.

The various items making up the total capital expenditure of £1,566,558 on September 30 last may be seen from the following:—

	Net Expenditure to Sept. 30, 1914 £	Net Additions £	Total Outlay £	Written Off to Sept. 30, 1915 £	Net Value £
Purchase of leases and Hutton Henry freehold land and minerals	92,922	—	92,922	1,204	91,718
Hardwick, Shotton, and Blackhall minerals ...	46,920	—	46,920	7,112	39,808
Horden colliery	591,827	—	591,827	38,885	552,942
Shotton colliery, coke ovens, and brickworks	274,291	14,528	288,819	52,714	236,105
Blackhall colliery	344,307	55,685	399,992	1,655	398,337
Land and houses (including Blackhall and Hardwick estates)	224,066	23,438	247,504	1,000	246,504
Horden and Shotton social clubs and institutes ...	1,144	—	1,144	—	1,444
Total	1,575,478	93,651	1,669,129	102,571	1,566,558

The steady growth of the Company may be seen from the following comparative statement:—

Year	Share and Loan Capital £	Net Capital Expenditure £	Net Profit £	Dividend %
1915	1,236,979	1,566,558	86,131	7
1914	1,081,246	1,485,379	116,624	8

* Six months. † Fifteen months to September 30.
(a) Value of coal raised was deducted from capital expenditure.

It is only a little over nine years since the Horden Collieries emerged from the development stage period. Since it has been possible to distribute dividends the distributions have varied between 4% and 12%, and since the beginning of the undertaking the shareholders have received on an average 5¾% per annum, including the years of development, which cannot by any stretch of the imagination be considered an excessive figure. On the other hand, since the beginning of the undertaking wages have been paid to the extent of £2,927,253, this including not only the wages paid in cash to the men but also cottage rents, and coals which are supplied to the men, which are as much part of the wages as the cash they get. As already indicated, the profit from the collieries has amounted to £102,503 for the past twelve months, as compared with £128,848 for the previous year. After providing for depreciation, Debenture interest, &c., there is a balance of £62,755, as compared with £100,928. The Ordinary dividend has accordingly been reduced from 8% to 7%, and the balance of £6,755, together with £3,245 taken from the carry-forward, making a total of £10,000, has been carried to the reserve, the carry-forward remaining at £44,437.

In order to show the manner of distributing the profits of the past six years we set out the following:—

Year ended September 30—	1915 £	1914 £	1913 £	1912 £	1911 £	1910 £
Profit on collieries ...	102,503	128,848	168,242	80,472	45,483	53,151
Sundries & transfer fees	1,393	1,372	1,277	1,209	1,102	986

* Includes £16,272 placed to Shotton Colliery depreciation account.

The authorised share capital is £1,000,000 in £10 shares. Of these, 92,340 have been fully paid, while on 7,660 shares £1 per share has been called up, and an amount of £5,918 has been paid in advance of calls, making the amount paid up at September 30 last £936,978. There is also in issue £303,750 of 5% Debenture stock, and the Company has obtained loans of £241,646. The total assets are valued at £1,734,663, of which capital expenditure, as pointed out, stands at £1,566,558. Herewith we summarise the liabilities and assets as at September 30 last:—

LIABILITIES.	£	ASSETS.	£

Profit and loss	94,437		
	1,734,663		1,734,663

Naturally the Company must continue to suffer from the scarcity of labour, but as a partial set-off it seems probable that it will receive somewhat higher prices for its output than it did during the past twelve months, during which no benefit was received from the higher prices prevailing owing to the fact that large pre-war contracts had to be filled, and the Chairman of the Company, Sir Hugh Bell, is moderately optimistic, pointing out that, while he did not know what was going to happen in the future, "the present outlook of the coal trade in this country is not unsatisfactory." Should this state of things continue throughout the year there should not be much difficulty in repeating the 7% on the Ordinary shares. At the present price of £12 for the £10 share, on a 7% basis a return of just over 6% is forthcoming, while on the Debenture stock the yield is about £4 19*s.* per cent. This may be seen from the following:—

Amount £	Description	Par £	Price £	Div. %	Yield £ *s.* *d.*

RUBBER REPORTS ANALYSED.

GARING (MALACCA).

Issued Capital: £76,352, in 67,980 £1 Ordinary and 8,372 £1 Preference Shares.

Results for Year to September 30, 1915

Total Planted Acres	Rubber Output lb.	Av. Yield per Planted Acre lb.	Price Realised per lb.	"All-in" Cost per lb.	Net Profit £	Dividend
1,279	124,935	98	2 4.4	1 3	6,842	Nil

Price of Ordinary Shares, 13/-. Market Capitalisation per planted acre, about £40.

THE Company was formed early in 1910, and the prospectus stated that the 682 acres of plantations were between two and three years old. This acreage should have been all in bearing during the past year, so that the yield of rubber per acre in bearing works out at

the very poor one of under 200 lb. This probably explains the low market capitalisation of about £40 per planted acre. Some 700 acres planted in 1911 should commence to produce next year, and considerable increase of crop is consequently to be looked for, and it is to be hoped that the new plantings will give a better yield than the old. The financial position is satisfactory, the balance sheet showing about £10,000 of cash resources. The Preference shares are entitled to 50% of the profits available for dividend until they receive 200%, when they rank *pari passu* with the Ordinary shares.

TAIPING RUBBER (F.M.S.).

Issued Capital: £204,210 in 2/0 Shares.

(Options on 46,800 Shares expire December 31, 1915.)

	Total Planted	Rubber Output	Av. Yield per Planted Acre	Price Realised	"All-in" Cost	Net Profit	Dividend
Year	Acres	lb.	lb.	per lb.	per lb.	£	£	%
1914	1,990	361,945	182	[illegible]	[illegible]	14,218	Nil	Nil
1915	2,190	484,950	221	[illegible]	[illegible]	[illegible]	[illegible]	12½

* Including sundry receipts.

Price of Shares, 3 -. Market Capitalisation per planted acre, £131.

The yield per acre in bearing is apparently not very good, as 1,820 acres of the 2,190 acres planted are now six years old. The market capitalisation of the estate per planted acre works out at £131, assuming that the shares under option at par till December 31 are taken up. The market price is quite high enough for the yield per acre. Moreover, allowing for the payment of the 12½% dividend declared, the balance sheet at September 30 shows current liabilities £1,944 in excess of the liquid assets. Against this the exercise of the options would bring in £4,680.

TAMIANG ESTATES (SUMATRA).

Price of Shares, 27/6. Market Capitalisation per planted acre, £80.

At the end of the financial year 1,579 acres were in bearing, 812 acres having been brought in during the year. A satisfactory yield per acre in these circumstances is indicated. The crop for the current year is estimated at 450,000 lb. The past year's profit has been entirely appropriated for clearing up the financial position, and the balance sheet now issued shows about £18,000 of surplus cash assets. The Debentures are convertible into shares at par, and when this is done the issued share capital will be £154,699. The price of the shares is about 27*s.* 6*d.*, so that, assuming the conversion of the Debentures, the market capitalisation per planted acre works out at £80—a very reasonable valuation. Dividends should be commenced on account of the current financial year. At full maturity in about three or four years the output of the estate should reach at least 900,000 lb., which, at 1*s.* per lb. profit, would represent £45,000, against an ultimate issued capital of £154,699. The estate then would be worth, say, £150 per planted acre, equal to well over £2 per share.

UNITED SERDANG RUBBER.

This is the latest Sumatra undertaking to be added to the list of producers of rubber at an "all-in" cost of under 1*s.* per lb. The report for the year ended August 31, 1915, shows a record profit to have been made, entirely consequent on increase of output and reduction of cost. Of 9,640½ acres planted, an average area of 6,628 acres, or 69%, was in bearing during the year 1914-15. The crop for the twelve months amounted to 2,474,972 lb., equal to 373 lb. per acre tapped—a high yield having regard to the fact that a considerable proportion of the bearing acreage was young rubber. These figures compare with a crop of 1,827,000 lb., equal to 316 lb. per bearing acre, in respect of 1913-14. A slightly lower price of 2*s.* 2.71*d.* was obtained for the past year's product, in comparison with 2*s.* 3.51*d.* in the preceding twelve months, but this decline in price was more than offset by the reduction of the "all-in" cost of production to 11.79*d.* per pound in the past year against 1*s.* 2.01*d.* in 1913-14. The 1915 low cost of production is all the more satisfactory inasmuch as it includes, in addition, selling and marketing charges and insurance, and £12,850 written off for depreciation against £4,208 in the previous year.

The net profit of the year under review is shown by the accounts to have been £149,874, against £106,630. The sum of £40,000 is again transferred to reserve, and the total dividend for the year is increased to 45%, requiring £112,500, as against 30%, calling for £74,150, in respect of 1913-14. The issued capital has been increased during the year to £250,000 by the issue of 222,730 2*s.* shares at 3*s.* premium, which brought in over £50,000. The net capital expenditure for the year was only £12,242, against £53,072 in 1913-14, and as in addition to the new capital obtained by the share issue £40,000 has been placed in reserve out of profits, the Company's financial position is now very strong, the surplus liquid assets, allowing for the payment of the final dividend for the year, amounting to £57,573 at August 31, 1915, against an excess of current liabilities of £23,000 at the end of the previous financial year.

The following table gives a good idea of the progress of the Company:—

	Years ended August 31— 1915	1914	1913
	Acres	Acres	Acres
Area suitable for rubber	14,140½	—	—
Planted acres	[illegible]	9,599½	9,493½

	(45%)	(30%)	(35%)
Carry-forward	14,958	16,294	16,337
Net capital expenditure	12,242	53,072	116,313
Issued capital (2*s.* shares)	[illegible]	227,737	226,424
Surplus liquid assets	57,573	[illegible]*	*11,137**

Present price of shares, 11/6. Market capitalisation per planted acre, £142.

* Excess of current liabilities after allowing for final dividend payment.

The crop for the current year is estimated at 2,913,800 lb., towards which 748,532 lb. have been harvested in the first quarter to November 30. Further large crop increases are to be looked for in subsequent years. This will be evident from the following statement of the age of the various plantings:—

	Acres		Acres
1903-04	18	1910	824½
1905	595	1911	825½
1906	1,099	1912	255
1907	3,295	1913-14	253
1908	958		
1909	1,343	Under 6 years ...	2,137½
6 years and over	7,503	Grand total	9,640½

Average acreage tapped, 1914-15 = 6,628 acres.

In view of the fact that the yield of rubber per acre tapped in the past year was 373 lb., a full maturity yield of at least 375 lb. per acre for the whole planted estate seems certain to be attained. Indeed, a full maturity yield of 400 lb. per acre may be witnessed. Assuming for the sake of conservatism, however, a yield of 375 lb. per acre, the present planted estate, when in full bearing, should produce 3,615,000 lb. of rubber per annum. Then the "all-in" cost should be reduced from its present level of 11¾*d.*

to 9*d.* per lb., and assuming a value of 2*s.* per lb. only for rubber, the resultant net profit of 1*s.* 3*d.* per lb. on the estimated maturity crop would be £225,000, or sufficient to pay 80% dividends on the issued capital and leave £25,000 for reserve, &c. The present price of the 2*s.* shares is 11*s.* 6*d.*, and allowing for the dividend the market capitalisation works out at £142 per planted acre. On the basis of rubber at 2*s.* per lb. the planted estate at full maturity would be worth at least £200 per acre—say, 15*s.* 6*d.* per share. At 11*s.* 6*d. cum* dividend the shares yield over 8% on the basis of the past year's dividend of 45%, which absorbed less than 75% of the profit earned from a bearing acreage equal to only 69% of the total planted area. The Company has 4,500 acres of unplanted ground suitable for rubber cultivation, and it has considerable cash resources wherewith to pay for additional plantings.

INDIARUBBER, GUTTA-PERCHA AND TELEGRAPH WORKS COMPANY.

TWELVE months ago very disappointing results were shown by this well-known Company, the accounts showing a net loss of £18,922. A sum of £50,000 was taken from the reserve fund, however, which enabled the accounts to show a credit balance carried forward. The loss was due to a number of causes. The War caused a diminution of sales in England and the entire stoppage of the manufacturing in France. The German Army came within a couple of miles of the French works, which had to be closed and abandoned. But the most serious losses incurred were not due to the War. A loss due to faulty organisation at the French factory previously pointed out fell on last year's results to a considerable extent. Moreover, the foreign agencies incurred a serious loss, partly through bad trading in Australia, South America, Africa, and Japan, and partly through certain unprofitable contracts. But as the outlook was fairly hopeful the directors decided to make a distribution of 5% on the Ordinary shares, necessitating so large a transfer from reserve of the amount already mentioned. For the twelve months to September 30, 1915, a very considerable recovery has taken place, and as against a loss last year, before payment of Debenture interest, of £2,922, there is now recorded a profit of £96,404. This satisfactory result has been achieved in spite of the constantly increasing cost of coal, labour, and raw material, and the dislocation of transport. The branches abroad have also shown much better results. After providing for the Debenture interest and Preference dividend there is a balance of £67,904, the Ordinary dividend is increased from 5% to 10%, and the balance of £17,904 is added to the carry-forward bringing it up to £18,937.

The following shows the manner in which the profits have been distributed for each of the last six years:—

Year ended Sept. 30—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£

Carried forward ...	18,937	1,033	7,455	5,904	4,657	22,614

* Taken from reserve.

The issued share capital of the Company is £750,000, and there are also in issue Mortgage Debentures amounting to £400,000. The reserve fund totals £350,000. The total assets are valued at £1,740,193, the main item being the premises, machinery, &c., valued at £554,946. Herewith we summarise the liabilities and assets as at September 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	750,000	Buildings, machinery, &c.	554,946
Mortgage Debentures ...	400,000	Sundry debtors	162,595
Reserve	350,000	Bills receivable	1,488
Debts and loans from bank	182,393	Cash with bankers ...	27,970
Bills payable, &c. ...	1,362	Stock in trade	357,933
Profit and loss	56,438	Investments	93,123
		Cash stock, debts, &c. ...	532,138
	1,740,193		1,740,193

Attention is drawn to the fact that the directors cannot now estimate the amount of tax on profits which may become payable under the Finance Act on account of the past year's trading, but they are evidently of opinion that the carry-forward of nearly £19,000 is sufficient to meet the probable demand. It is likely that the Company will continue to be busily employed, and the results therefrom should continue to be satisfactory from the shareholders' point of view. The £10 Ordinary shares may be obtained at about £8, and on the basis of a 10% distribution the yield afforded is about 13⅜%. On the Preference shares a yield of about 6% may be obtained, and on the Debentures one of about 4¼%, as may be perceived from the following statement of the capital, prices and yields afforded:—

Amount	Description	Par	Price	Div.	Yield
£		£	£	%	£ s. d.
400,000	4% Debentures	100	95	4	4 5 1
250,000	5% Cum. Preference... ...	10	8⅔	5	5 19 5
500,000	Ordinary shares	10	8	10	13 12 7

HENRY TATE AND SONS, LIMITED.

THE twelve months to September 30 last were of a much less prosperous time for this well-known sugar Company than the twelve months to September 1914, which, indeed, was the most prosperous experienced by the Company, certainly so far as published figures are concerned. The trading profit for the year was £345,788. For the past twelve months it is less than one half that sum, amounting to £166,993. Up to 1910 the public was only interested in the Debenture Stock issued by the Company, but in the year mentioned £250,000 of the Preference shares were offered for sale. It was not until 1910 that any statement of accounts was published, but from the original prospectus issued in 1903 the profit figures for the seven years before flotation as a public company may be gathered, these covering the period from the formation of the business into a private limited company.

The annual profit before charging interest on shareholders' deposits and on Mortgage Debenture stock, directors' fees and income tax, but after making full provision for depreciation and managing directors' remuneration, were as follows:—

	£
Year ended Sept. 30, 1896	91,012
,, ,, 1897	148,390
,, ,, 1898	104,307
,, ,, 1899	62,161
,, ,, 1900	100,263
,, ,, 1901	215,274
,, ,, 1902	97,582

When the Preference shares were offered for sale in 1910 the auditors pointed out that the annual profits, after charging all working expenses, depreciation, &c., directors' fees, and managing directors' remuneration, but without charging interest on Mortgage Debenture stock, and income tax, for the seven years to 1909 were as follows:—

	£
Year ended Sept. 30, 1903	81,588
,, ,, 1904	106,373
,, ,, 1905	81,109
,, ,, 1906	127,170
,, ,, 1907	113,602
,, ,, 1908	59,932
,, ,, 1909	130,741

Since that time the profits have been as follows:—

	Trading Profit
	£
Year ended Sept. 30, 1910	136,403
,, ,, 1911	286,214
,, ,, 1912	176,721
,, ,, 1913	147,856
,, ,, 1914	345,788
,, ,, 1915	166,993

Naturally, very considerable fluctuations have occurred as the business is such a speculative one. After providing for Debenture interest and Preference dividend there is a balance for the past twelve months of £124,493. This enables a dividend of 25% to be paid on the Ordinary share capital, while a sum of £10,000 is carried to reserve, the carry-forward being denuded to the extent of £10,507.

In the following table we set out the manner of distributing the profits for each of the past six years:—

Yr. ended Sept. 30—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£
Trading profit ...	166,993	345,788	147,856	176,721	286,214	136,403
Income tax ...	—	4,832	2,699	—	256	907
Directors fees ...	3,500	3,500	3,500	3,600	3,500	3,500

	124,493	298,456	102,657	134,221	243,458	92,996
Ordinary div. ...	125,000	250,000	92,500	115,000	210,000	85,000
	(25%)	(50%)	(18½%)	(23%)	(42%)	(17%)
	— 507	48,456	10,157	19,221	33,458	7,996
Reserve fund ...	10,000	40,000	10,000	20,000	20,000	10,000
	—10,507	8,456	157	— 779	13,458	— 2,004
Brought forward	33,308	24,852	24,695	25,474	12,016	14,020
Carried forward	22,801	33,308	24,852	24,695	25,474	12,016

As already intimated the public is only directly interested in the Debenture Stock and Preference shares, the whole of the Ordinary being held by the directors. Both prior issues are well secured, and the yields afforded are moderately good, ones of 4⅝% being forthcoming on the Debenture stock, and one of 5% on the Preference shares, the former being quoted at 98⅝ and the latter at £11 for the £10 share.

The capital, prices, and yields are as follows:—

Amount	Description	Par	Price	Div.	Yield
£		£	£	%	£ s. d.
500,000	4½% 1st Mort. Irred. Deb. ...	100	98⅝	4½	4 13 6
300,000	5½% Cum. Pref. shares ...	10	11	5½	5 0 0
500,000	Ord. shares	10	—	25	—

RUBBER TOPICS.

THE price of rubber has again been well maintained this week at over 3*s.* 6*d.* per lb., with very firm quotations for forward positions. The recent rather prevalent idea that the market was being rigged has been dropped by those responsible for it. Leaders of the industry view the outlook favourably. For instance, at the meeting of the Asahan Rubber Estates this week, the Chairman, Mr. George Croll, of Messrs. Harrison and Crosfield, said he thought it reasonable to anticipate that something like present prices will continue during the Company's current year to July 31 next.

BANTAM (JAVA).—At the meeting this week the Chairman stated that the "all in" cost for the past financial year was 1*s.* 1.8*d.*, and not 1*s.* 3.32*d.*, as misprinted in the annual report, and, consequently, so given in our analysis last week.

KWALOE RUBBER.—At the meeting this week the Chairman put the maximum yield of this estate at full maturity at 600,000 lb. to be reached in 1920, the estimate for 1916 being 120,000 lb.; for 1917, 240,000 lb.; for 1918, 360,000 lb.; and for 1919, 480,000 lb. He also mentioned that the directors reckoned the estate to have a present value of £75 per planted acre, equal to about par for the Company's shares.

The "Labour Year-Book for 1916," just published, contains over 700 pages, and is published in two editions: card cover, 1*s.* net; cloth cover, 2*s.* 6*d.* net. (London: Co-Operative Printing Society, Limited.)

MINIMUM TIN STOCKS.

A NEW development has occurred in tin which tends to bring into prominence the determination of the British authorities to keep as closely as possible in their own control during the period of the War the mineral wealth of the Empire. As is well known, the world's main supply of tin comes from the Straits Settlements, the exports thence during recent years having amounted to something over 60,000 tons per annum, or, roughly speaking, about half the total production, the bulk of the remainder coming from Bolivia and the Dutch East Indies.

It is not without some apprehension that the recent reduction has been witnessed in the stocks of tin held in public warehouses in this country; though, fortunately, there has been a very material increase since the end of 1914, when the total stocks in London, Liverpool and Swansea amounted to only about 1,000 tons. During the current year the holdings have been increased to about double this quantity, but even this involves a dangerously depleted state of warehouses and perilously low reserves, in view of various conditions of special nature now operating. The activity of enemy submarines in the Mediterranean, and the persistent reports which have been cabled to America announcing the closing of the Suez Canal, brought about great excitement among United States consumers of tin, who set to work vigorously to cover their requirements; and their anxieties were not allayed by the knowledge that one or two steamers with very large quantities of tin were proceeding to New York through the danger zone, and that the arrival of supplies already purchased would be delayed by several weeks owing to the vessels carrying them having been ordered to proceed to America *via* the Cape. Two thousand tons of tin is quite reasonably regarded by the authorities as constituting an insufficient reserve here, in view of the perils of navigation, the possibility of undue delay in transit, and the other important fact that neutral countries were steadily drawing upon the supply held in English warehouses.

For a long time now there has been considerable delay in the issuing, withholding or refusing of permits necessary to enable shipments of tin to be made from this country to neutrals, and losses have been sustained in many directions owing to these delays, and also to the vacillating policy which seems to have dictated the issuing, withholding or refusing of permits. The announcement that the authorities have decided to require a sufficient stock of tin to be kept in this country to safeguard the requirements of Great Britain and her Allies has, therefore, been welcomed, for it shows that at last there is some attempt at formulating a policy, and that an end is apparently to be made, so far as tin is concerned, of haphazard and shiftless executive work. The new policy necessarily will involve a still closer watch being kept upon the issuing of export licences, but in the circumstances it is felt that an intelligent attitude is now being taken up, while it is some consolation to know that the needs of the Allies are being looked after equally with our own. This is as it should be, but it seems to take us an abnormally long time to get our machinery into smooth working.

As regards the quantity which the authorities believe essential to safeguard the position here, no official statement has been made, but it is understood unofficially that 4,000 tons or so is regarded as the desirable minimum. The immediate effect of the announcement was not only to put the price of tin down sharply in London, and to bring cash delivery to a discount compared with three months, but to put a premium on cash and to advance prices sharply both for near and forward deliveries in America. Opinion is generally divided as to the ultimate effect which the new policy will have upon the market at large, but it seems to be generally expected that the tendency will be to create a higher range of values everywhere. As far as America is concerned, prices there may easily go to a substantial premium over London, because there is bound to be competition in America for supplies direct from the East, in view of the fact that it is exceedingly doubtful whether permits will be issued at all from this country until the stocks have been sufficiently increased. America will probably also turn her attention more and more to Dutch tin, and it is known that plants are being put up both in the neighbourhood of New York and Pittsburgh for the treatment of imported tin ores. The United States produces practically no tin, but more than one attempt has been made to create a tin-smelting industry in the United States by securing regular supplies of tin concentrates from abroad. One such, made some years ago to secure material from the Straits Settlements, broke down owing to the authorities there placing heavy export duties upon the tin ore, while an effort made within the last few months to secure Nigerian material was similarly frustrated. The United States is thus forced into the only market left, namely, Bolivia, in which country there are already important United States interests.

Prior to the War the whole of the Bolivian output came to England and Germany for treatment. The closing of the German market has caused a diversion of the entire shipments to this country, and there are now stored here tin concentrates containing 7,000 tons of metallic tin. This added to the 2,000 tons of metallic tin in warehouse brings the actual tin reserves in this country to about 9,000 tons; but it appears that the authorities are leaving the tin concentrates altogether out of their calculations, although they might have also looked at the matter from this point of view, with possible advantage. If under the new conditions which have been created metallic tin in the United States continues to command a considerable premium over prices in the London market, which is generally expected will be the case, then the United States would also be able to pay much higher prices for their ore than English smelters can do, and this must tend to cut down the importance of the English tin-smelting industry just at the time when its growing power and influence are more than ever desirable. It is well that this aspect of the situation should be considered by the authorities here, who, whilst actuated by the very best of intentions, seem in too many of the steps which they have taken for the safeguarding of national supplies to have been gravely handicapped by a lack of knowledge of the problems which they were attempting to tackle. It is earnestly to be hoped that these well-intentioned tin regulations will not really prove to have inflicted a severe blow upon the British tin-smelting industry.

COLONIAL WOOL SALES.

BOOM PRICES.

THE final series of Colonial sales for 1915 finished in Coleman Street last Thursday. At them there was an intensity of competition which has seldom been exceeded, even when France, Belgium and Germany have had free access to all available supplies, and the year's business has demonstrated that the home trade can very well do without any support from Germany. It is much too early to talk about the attitude of the Board of Trade and other responsible parties towards Germany when the War finishes, but at the present time the fact is emphasised that all supplies have been got through, and the year's auctions finished with practically clean-swept boards. As we write this the final figures showing the actual takings of the various sections of the trade are not available, but up to the end of the seventh series the home trade had absorbed 1,802,000 bales, the Continent 158,000 bales, and America 435,000 bales, making a grand total of 2,395,000 bales. This shows a wonderful clearance of Colonial supplies, and in this one particular expectations of all have been greatly exceeded. In fact, when the year opened everybody felt overfaced with the supplies that were coming forward, but evidently the consumptive capacity of the three sections named has proved equal to the occasion, and if supplies had been allowed out of the country to Continental neutrals there would have been to-day a distinct shortage.

The course of the auctions can be summarised in very few words, but some details are well worth giving. The series began with the tendency of prices distinctly upwards, and everything finished at the top notch. Record figures have been paid for good

greasy merinos, and values here have generally appreciated 2*d.* per lb. compared with the close of the November series. This means that very big figures have been paid for Australian greasy merino wool, up to 1*s.* 9½*d.* being actually realised. No such prices as these were ruling before the War commenced, and even then wool was looked upon as a dear commodity. The advances in the better classes of scoureds is from 3*d.* to 4*d.* All this clearly indicates a remarkably strong market, and there is evidence that the trade has confidence in the future of prices.

Turning to crossbreds, the record here is equally as satisfactory, splendid values having been paid. It is really a little difficult to say what the rise is exactly, owing to their being a great dearth of greasy crossbred fleece wools, but the improvement can be put down at 10%, or, say, about 2*d.* per lb. on the medium and fine qualities and a good 1*d.* on coarse descriptions. Scoureds, too, have shown an improvement of about 1*d.* to 2*d.* The chief supply of crossbreds has been in sliped parcels from New Zealand, and some very good wools have been catalogued. These have formed fully three-quarters of the crossbred offerings, and the various khaki requirements have had some beneficial effect upon the movement of these wools. All the loss seen in July and September has now been recovered; no doubt the recent Russian khaki, together with the three million yards of overcoating ordered, have been more or less covered in wool during the past fortnight in Coleman Street. America has not been a very heavy buyer, it being very evident that her operators have about reached the limit in regard to obtaining licences. There have been developments during the past month which are not altogether satisfactory, and if America would not look so persistently upon Germany, and endeavour to do trade with that country through neutrals, she would shine better, and also establish more confidence in responsible quarters in London.

No one can look at to-day's wool values without being forcibly reminded of the piping times of 1899, which was the previous high-water mark, apart from 1872. The boom culminated at the December series, 1899, being followed by a very serious slump in 1900. Prices then were looked upon as being dangerously high when 64's tops stood at 2*s.* 9*d.*, but to-day they are worth in Bradford all round 3*s.* 7½*d.* to 3*s.* 8*d.*, or nearly a shilling more. Still, there is not the least evidence of uneasiness in the trade, and current prices for wool and tops are being paid quite as readily as when wool was 1*s.* per lb. and tops 1*s.* 6*d.* In 1899 no doubt prices were very high, but they look very reasonable in the light of those ruling to-day. We give below particulars of buying prices of average classes of wool at the December series in that year and what similar wool has actually realised at the current series of sales, giving both merinos and crossbreds:—

	Dec. 1899	Dec. 1915
	s. d.	*s. d.*
GREASY MERINO WOOLS.		
Victorian: Western, good quality and condition	1 5	1 9
N.S. Wales: Riverina, good staple and condition ...	1 4	1 8
,, N. England, fine, Clush	1 4	1 8
Queensland: Central, good staple and condition ...	1 3	1 7½
S. Australian: Mallands, fair length and condition ...	1 1	1 7
N. Zealand: South Island, fair character	1 1½	1 6
S. African: fair staple, skirty	0 11	1 1
SCOURED WOOLS.		
Victorian: Fair body and colour	2 5	2 11
Queensland: Good quality, colour and condition ...	2 3	2 7
N.S. Wales: Fair pak, rather fatty	2 2	2 6
N. Zealand: Fair body and colour	2 2	2 7
Cape: Kaffrarian, short light	1 11½	2 0
New Zealand: Half-bred: super 50–56's	1 1½	1 9
,, ,, Crossbred: medium 46's	0 10½	1 7
,, ,, ,, coarse 40's	0 8½	1 5½
,, ,, ,, ,, 36's	0 7½	1 5

One cannot leave this subject without showing the effects of khaki upon New Zealand sliped crossbred wools, these being about the most suitable for use in producing the excellent cloths which are being worn by practically all the troops fighting under the British flag. We give below prices actually realised in Coleman Street at the lowest point these wools ever touched, what they were worth a year ago, and to-day, and there is demonstrated very clearly the effect of the great khaki boom upon every class of staple shown:—

Description.	Nov. 1914	Dec. 1914	Dec. 1915
	d.	*d.*	*d.*
Sliped half-bred coarse [illegible]	6	5½	5½
,, Crossbred [illegible]	4½	4	4½
,, ,, 2nd ,, ,,	4½	4½	5½
,, ,, ,, ,,	4½	4½	5½
,, half-bred, combing	6	5½	5½
,, [illegible]	4½	5½	6
,, [illegible]	5	5½	6½
,, 4th ,, ...	5½	19	21
,, [illegible]	4½	4½	5½
,, ,, [illegible]	5½	16	18
,, ,, crossing	4	16½	16½

As far as one can judge the outlook there is certainly a big trade yet to be done, but all the same it behoves everyone to look seriously at where values stand. We cannot see any sign of a fall, but all the same there is no need on the part of any branch of the trade to push prices higher, and a consolidation on to-day's level will do infinitely more good than values being forced still higher. Wool is dear enough.

AMERICAN COTTON.

LIVERPOOL: Wednesday.

SINCE our last report prices for American cotton, after declining ¼*d.* per lb. under realising selling by American long interests, and also freer offerings of actual cotton from the South, have since regained about half of the fall. To-night's closing rates show a decline of 14 points for winter months since we last wrote.

The Washington Agricultural Bureau crop estimate was issued on the 10th inst., and figured the crop, exclusive of linters, as 11,161,000 bales, against 15,966,000 last year. A few days later we were furnished with the consumption figures for the United States for the first four months of the season. These show a considerable expansion in the American consumption, and suggest that American mills may consume 6½ million bales this season. In November this year 514,000 bales cotton and 78,000 linters were used, against 420,000 cotton and 27,000 linters last year. For the first four months of the season 1,977,000 bales cotton and 261,000 linters have been used, as against 1,671,000 cotton and 108,000 linters in 1914. Last Monday we had the seventh ginners' report, giving the total number of bales ginned up to December 12 as 10,303,000 bales, against 9,711,000 last report and 13,977,000 in 1914. These statistics we take to confirm the views we have previously expressed, viz., that the crop is round about 12,000,000 bales, rather over than under, and that American mills are likely to consume a good deal more cotton than they did last season.

One of the most remarkable phenomena about the War in its commercial effects is the extraordinary way in which the situation has developed contrary to general expectations. At the outbreak of hostilities one great cause for anxiety was the feared industrial depression in Lancashire, but our textile industry, which had been languishing during the summer months of 1914, revived at once, and has since been profitably engaged. The inability of the Central Powers to obtain their supplies of cotton, more particularly after the contraband declaration by this country, was expected to prelude a fall in price. Instead of this, values have risen ever since the declaration was made. At the outbreak of war, so far as cotton was concerned, its immediate effect was to make everyone foresee a time of extremely low prices; but as soon as the first panic was over, and the market was trusted to find its own level, shorts were badly caught, and the Americans showed to the world that, even when deprived of an important Continental outlet, they could carry a large crop and hold till remunerative rates were obtained. All this experience is a warning as to the difficulty under the present unusual conditions of forecasting the future course of the market.

NORTHERN PACIFIC RAILWAY

NINETEENTH ANNUAL REPORT—FOR THE YEAR TO JUNE 30, 1915.

Office of the Northern Pacific Railway Company,
34 Nassau Street, New York, September 15, 1915.

To the Stockholders of the
Northern Pacific Railway Company.

The following, being the Nineteenth Annual Report, shows the result of the operation of your property for the fiscal year ending June 30, 1915 :—

INCOME ACCOUNT.

I.—OPERATING INCOME. (SEE NOTE BELOW.)

Railway operating revenues (Transportation and incidents thereof, other than those mentioned below)		$62,171,652 60
Railway operating expenses		37,108,048 88
Net revenue		$25,063,603 72
Railway tax accruals	$4,470,958 70	
Uncollectible railway revenues	4,151 33	
		4,475,110 03
Total operating income		$21,588,493 69

II.—NON-OPERATING INCOME. (SEE NOTE BELOW.)

Hire of freight cars—credit balance	$512,137 20
Rent from locomotives and cars	421,787 31
Joint facility rent income	1,850,275 32
Income from lease of road	273,352 51
Miscellaneous rent income	330,970 61
Miscellaneous non-operating physical property—rents	55,148 88
Separately operated properties—profit	59,194 81
Dividend income	*6,200,952 00
Income from funded securities	235,004 75
Income from unfunded securities and accounts	440,713 01
Income from sinking and other reserve funds	105,245 99
Miscellaneous income	25,467 94
Total non-operating income	$10,442,959 33
Gross income	$32,031,453 02

III.—DEDUCTIONS FROM GROSS INCOME. (SEE NOTE BELOW.)

Rent for locomotives and cars	$418,552 28
Joint facility rents	493,150 80
Rent for leased roads	61,551 86
Miscellaneous rents	5,772 89
Interest on funded debt	†12,294,400 16
Interest on unfunded debt	54,380 43
Miscellaneous income charges	191,084 17
Total deductions from gross income	$13,208,632 69
Net income	$18,822,820 33

IV.—DISPOSITION OF NET INCOME.

Dividend appropriation of income	$17,360,000 00
Income balance for year—transferred to profit and loss	$1,462,820 33

NOTE.—Radical changes have been made in the Classifications of the Interstate Commerce Commission as of July 1, 1914. The form of Income Account here used is that prescribed by the Commission. The Company does not, however, admit the correctness of the groupings of some of the items of income.

* Includes dividends on stock of Chicago, Burlington & Quincy RR. owned by this Company.

† Includes interest paid on this Company's proportion of joint bonds issued by this Company and the Great Northern Railway Company, secured by C., B. & Q. RR. capital stock as collateral.

MILEAGE OPERATED.

Changes have taken place in the mileage operated during the year as follows :—

There were added :—

		Miles
July 1, 1914.	North Yakima & Valley Lines in Washington, acquired	39·72
July 1, 1914.	Port Townsend Southern Railroad—Southern Division in Washington, acquired	15·00
July 1, 1914.	Oregon-Washington RR. & Navigation Co. in Washington, leased	·13
Aug. 23, 1914.	Spokane Branch, Washington, acquired	9·90
Aug. 23, 1914.	Coeur d'Alene Branch, Washington, acquired	3·74
Nov. 25, 1914.	Spokane Track Branch, in North Dakota, extended	33·85
Dec. 12, 1914.	Edgecomb-Kruse Branch in Washington, constructed	3·80
Dec. 15, 1914.	Point Defiance Line in Washington, constructed	42·95
Dec. 1, 1914.	Seattle South Eastern Railway in Washington, leased	·27
Feb. 19, 1915.	Main Line in Washington (second track constructed)	3·44
May 1, 1915.	Connection with "Soo" Line in Minnesota, constructed	·80
May 1, 1915.	Cuyuna Northern Branch in Minnesota, constructed	·09
May 1, 1915.	Minneapolis, St. Paul & Sault Ste. Marie Ry. in Minnesota, leased	·74
June 1, 1915.	Connection with Great Northern Railway in Washington, constructed	·59
June 30, 1915.	Sundry petty changes and corrections	14·97
	Total additions	169·59

Deductions :

Dec. 15, 1914.	Tacoma-Tenino Line in Washington, track taken up	·61
Dec. 15, 1914.	Olympia Branch in Washington, track taken up	3·55
Dec. 15, 1914.	Port Townsend Southern R.R. (Tumwater Branch), track taken up	5·00
Feb. 19, 1915.	Main Line in Washington, track taken up	5·74
June 1, 1915.	Monte Cristo Branch in Washington, leased	42·12
	Total deductions	57·02
	Net additions	112·57
	Mileage operated June 30, 1914	6,353·60
	Mileage operated June 30, 1915	6,466·17
	Average mileage operated during year	6,416·67

EARNINGS.

FREIGHT BUSINESS.

Freight revenue was $43,833,636.90, a decrease of $4,322,195.89, or 8.98 per cent., compared with the previous year.

5,164,571,432 tons of revenue freight were moved one mile, a decrease of 464,779,995 tons one mile, or 8.26 per cent., less than the previous year.

The average earnings per ton mile decreased from .00855 to .00849.

The revenue train load increased from 566.91 to 573.06 tons. The total train load, including Company freight, increased from 665.76 to 668.45 tons.

The number of miles run by revenue freight trains was 8,107,560, a decrease of 1,081,812, or 11.77 per cent.

PASSENGER BUSINESS.

Passenger revenue was $13,619,113.80, a decrease of $2,087,886.60, or 13.29 per cent., compared with the previous year.

Mail revenue was $1,116,525.39, an increase of $72,804.93, or 6.98 per cent.

Express revenue was $1,225,192.88, a decrease of $86,984.34, or 6.63 per cent.

Sleeping-car, parlour and chair car, excess baggage and miscellaneous passenger revenue was $803,480.28, a decrease of $236,009.92, or 22.70 per cent.

Total revenue for persons and property carried on passenger trains was $16,764,312.35, a decrease of $2,338,075.93, or 12.24 per cent., compared with the previous year.

The number of passengers carried was 8,756,784, a decrease of 1,103,439 from the previous year, and the number of passengers carried one mile was 600,273,153, a decrease of 81,998,277, or 12.02 per cent.

The number of miles run by revenue passenger trains was 10,356,705, a decrease of 1,658,433, or 13.80 per cent.

The average earning per passenger per mile was .02269 and .02302 last year.

OPERATING EXPENSES.

CONDUCTING TRANSPORTATION.

The charges for transportation expenses were $18,987,055.76, a decrease of $2,780,145.56, or 12.77 per cent., as against a decrease of total operating revenue of 10.33 per cent.

MAINTENANCE OF EQUIPMENT.

The charges for maintenance of equipment were $7,317,074.42, a decrease of $1,121,201.24, or 13.29 per cent.

LOCOMOTIVES.

Total number locomotives on active list June 30, 1914		1,357
Additions :		
Engines repaired with boilers purchased		5
		1,362
Deductions :		
Engine sold during the year, from active list		1
Total locomotives on active list June 30, 1915		1,361
In addition to the engines on active list there were :		
Withdrawn from service and on hand from previous year	123	
Dismantled during year	1	
Leaving on hand engines withdrawn from service which may be sold	122	

PASSENGER EQUIPMENT.

On June 30, 1915, the Company owned 1,287 passenger-train cars, including 129 sleeping-cars owned jointly with the Pullman Company, an increase of 127 cars. The number and kind of cars owned is shown in table on page 40 of Pamphlet Report.

Of the 1,287 cars owned, 969 were not due in shops for two months or more.

FREIGHT EQUIPMENT.

Comparative number and capacity of freight cars :—

	1914. Number.	1914. Capacity (Tons of 2,000 lb.)	1915. Number.	1915. Capacity (Tons of 2,000 lb.)	Inc. or Dec. Number.	Inc. or Dec. Capacity (Tons of 2,000 lb.)
Box	26,508	994,930	25,936	983,150	422	11,780
Furniture and Automobile	747	26,850	672	24,895	75	1,955
Refrigerator	4,080	130,320	4,052	129,855	28	465
Stock	2,702	65,285	2,473	57,435	229	7,850
Flat	8,654	305,195	8,507	301,085	147	4,110
Oil	62	2,555	62	2,555	—	—
Coal	5,336	255,990	5,206	252,065	130	3,925
Ballast and Ore	1,035	43,105	1,252	54,290	*217*	*11,185*
Total	48,974	1,824,230	48,160	1,805,330	814	18,900
Percentage	—	—	—	—	1·66%	1·04%
Average capacity per car	—	37·3	—	37·5	—	—

NOTE—Figures in italics denote increase.

Of the total number of freight cars on June 30, 1915, 2,119, or 4.40%, were in need of repairs costing $5.00 or more per car.

No additional passenger or freight equipment is under contract for construction or is building at the Company's shops.

MAINTENANCE OF WAY AND STRUCTURES.

The charges for Maintenance of Way and Structures were $8,523,657.45, a decrease of $840,166.46, or 8.97 per cent.

Block Signals.

Block signals have been installed and placed in service at the following points :—

Minnesota : Brainerd depôt.
Montana : Livingston-Toston.
Idaho : Paradise-Sand Point and Athol-Hauser.
Washington : Pasco-Alfalfa and Cle Elum-Easton.

On June 30, 1915, on 2,485 miles of important main line there were 1,184.30 miles protected by automatic block signals, and 337.50 miles protected by manual block.

Interlocking Plants.

Interlocking plants have been installed and placed in service at McGregor, Minnesota, and at Ballard and Steilacoom, Washington.

CHARGES TO CAPITAL ACCOUNT.

Upon requisition of the Executive Officers, approved by the Board of Directors, expenditures for additions to and betterments of the property have been made during the past fiscal year for :—

REAL ESTATE, RIGHT OF WAY AND TERMINALS :	
Superior, [illegible]	$8,224 [illegible]
St. Paul, Minneapolis [illegible]	[illegible]
Minneapolis, Minnesota [illegible]	42,746 41
Tacoma, Washington, [illegible]	2,[illegible] 4[illegible]
Aberdeen, [illegible]	(Cr. 2,[illegible]0
	$75,706 [illegible]3
BRANCHES, LINE CHANGES, GRADE REVISION AND [illegible] MAIN TRACK :	
Superior, Wis. [illegible]	$201 [illegible]
Cumuru Northern [illegible]	57,335 57
Duluth Transfer Railway, [illegible]	24,923 55
Minneapolis, Minn. [illegible]	[illegible]
Rivulet to Lotus Lake, [illegible]	12,753 81
Golden Valley, [illegible]	134,729 96
Spring Creek Line, [illegible]	592,849 15
Western [illegible]	[illegible]
Bitter Root [illegible]	1,513 00
Camp Creek Branch, [illegible]	2,390 12
Elkhorn Line, [illegible]	[illegible]
Huntley to [illegible]	4,740 38
Edgerton to Kraus, [illegible]	55,313 12
Fremont-Ballard Line, [illegible]	[illegible]

GENERAL.

CHANGES IN ACCOUNTING FORMS PRESCRIBED BY INTERSTATE COMMERCE COMMISSION.

Readers of this report will observe that the Income Account for the business year 1915, appearing on page 5 of Pamphlet Report, differs much in form from that heretofore used in these reports; also, that comparison with figures for the next prior year have been omitted.

The form herein used is that at present prescribed by the Commission. While the correctness of totals, and of resulting surpluses, appearing in this form is admitted, that of some of the groupings of revenues from the several sources is not.

Radical differences in the two forms of Income Account have made impracticable the usual comparisons between figures for the year covered by this report and those for the year 1914. Consequently no attempt at such a comparison has been made herein. Should present regulations continue in force comparison can be resumed another year.

IMPROVEMENT IN OPERATION.

Compared with 1914, Freight Revenue decreased $4,522,195, or 8.98%, while Revenue Freight train miles decreased 1,081,812, or 11.77%.

Compared with 1914, Revenues from transportation of persons and property in passenger trains decreased $2,338,075, or 12.24%, while Revenue Passenger train miles decreased 1,658,433, or 13.80%.

Compared with 1914, cost of conducting transportation decreased $2,780,145, largely through the decreases in train mileage mentioned above.

MAINTENANCE OF WAY.

The settled policy of the Company to maintain its railways in a high condition of safety and efficiency was again followed in 1915.

Expenditures under this head per mile of road operated in each of the ten years up to and including 1915 have been as follows :—

Year.	Average Miles.	Total Expenditures.	Per Mile.	Per Cent. of Expenses per Mile.
		$	$	
[illegible]	5,401·14	7,493,729 90	1,387 45	12·22
1907	[illegible]	[illegible]	1,680 03	15·54
1908	[illegible]	8,762,297 33	1,555 44	14·84
1909	5,671·29	[illegible]	1,[illegible] 44	11·46
1910	[illegible]	10,842,955 20	[illegible] 88	14·55
1911	[illegible]	8,065,462 47	1,355 44	13·43
[illegible]	[illegible]	7,861,490 57	1,304 79	12·40
1913	6,259·85	10,188,053 94	1,627 52	14·00
1914	6,325·26	9,363,823 91	1,480 39	13·29
1915	6,460·67	8,523,657 45	1,319 31	12·49

[illegible] pages 10 and 11 of Pamphlet Report, of which the respective weights of rail sections now in the tracks of the system are [illegible].

Among the renewal items of the year were 3,017,499 cross-ties, or sufficient, at the rate of 3,000 cross-ties per mile, for relaying 1,005.8 miles of track.

Some years back the Company began the use in its tracks of ties treated to resist decay, and installed for this purpose tie-treating plants; one near Brainerd, Minnesota, and another near Paradise, Montana.

Since these plants have been in operation the Company has been laying their output in its tracks, so that on June 30, 1915, the total number of treated ties in track was about 7,400,000, or the quantity required for 2,466 miles on the basis of 3,000 ties per mile.

In the year 1915 treated ties put into track numbered approximately 1,456,676 out of a total of 3,017,499 ties of all kinds laid in renewals. Treated ties are considerably more costly than those not treated, but it is considered that increase in initial cost is much more than overcome by increased life in track. As the proportion of treated ties in the tracks increases annual renewal requirements will correspondingly decrease. That tendency manifested itself appreciably in the year 1915, the total tie renewals having decreased 113,959 ties, compared with those of 1914.

On June 30, 1915, there were in the Company's tracks—mostly in main line—1,564.46 miles of 85-lb., 2,092.72 miles of 90-lb., and 47.20 miles of 100-lb. steel rails; or in the aggregate 3,704.58 miles laid with rail of 85-lb. section or heavier. In track laid with 90-lb. section there was an increase during the year of 255.89 miles.

EXPENDITURES ON CAPITAL ACCOUNT.

The aggregate of these charged up during the year was $11,362,237.27; the details of which, as well as the contra thereto required for accounting purposes, appear on pages 13 and 14 of Pamphlet Report.

Some of the largest of these outlays were as follows :—

Grade revision and double-tracking of the main line at the Cascade Mountain crossing, State of Washington	$664,744 91
Construction of Spring Creek line, in North Dakota	592,849 15
Spokane, Washington, grade separation	453,605 26
Construction Point Defiance line, Tacoma to Tenino, Washington	2,287,181 77
Station and other buildings and fixtures	982,148 11
New steel passenger-train cars	1,182,266 04

Most of the Company's large construction work heretofore undertaken having been finished, outlays on capital account will likely be smaller hereafter.

BOND SALES.

As mentioned in the last annual report, $20,000,000 of the Company's Refunding and Improvement bonds were sold in the month of July 1914, and from the proceeds the Company's one-year notes maturing in that month were paid off; the remainder being used to reimburse the Company's treasury for previous advances of its free moneys for investments on Capital Account.

In the forepart of the present calendar year $1,500,000 of the Company's Prior Lien bonds, available for additions to property, were issued and sold. But $1,000,000 of bonds of that class remain issuable.

The Company is without floating debt at this time, save such as results in the ordinary way from the operation of its properties and the conduct of its business.

FORM OF BALANCE SHEET.

Attention is called to the difference in form of Balance Sheet contained in this report from that heretofore used in the Company's reports.

Such changes have been made to conform with present regulations of the Interstate Commerce Commission on the subject.

The report of the Comptroller gives further details of the Company's transactions.

The Board of Directors especially desires to extend to the Company's officers and employees, as a body, its consideration and thanks for the fidelity and intelligence with which their respective duties have been performed throughout the year.

By order of the Board of Directors,
W. P. CLOUGH, *Chairman*,
JULE M. HANNAFORD, *President*.

LAND DEPARTMENT.

The total net sales for the year of all lands aggregate 1,004,017.77 acres, and the consideration received therefor was $4,124,579.89.

Of this amount $1,005,433 76 was in cash.
and 3,119,146 13 in contracts for deferred payments.

Total ... $4,124,579 89

The cash transactions of the department were as follows :—

Received from sales as above		$1,005,433 76
Received from payments on contracts		781,225 25
Interest collected on deferred payments		309,927 72
Total		$2,096,586 73
Less, for expenses	$130,974 12	
Less, for taxes	565,688 15	
		996,662 27
Net cash receipts for year		$1,099,924 46

The net proceeds credited to the Northern Pacific Estate were made up as follows :—

Total net sales as above		$4,124,579 89
Interest collected		309,927 72
		$4,434,507 61
Less expenses and taxes		996,662 27
		$3,437,845 34

BALANCE OF LAND DEPARTMENT CURRENT ASSETS.

THE CUBAN-AMERICAN SUGAR CO.

ANNUAL REPORT FOR THE FISCAL YEAR ENDED SEPTEMBER 30, 1915.

New York, December 8, 1915.

To the Stockholders of The Cuban-American Sugar Company :

Your Board of Directors submit the following report for the fiscal year ending September 30, 1915 :—

The total output of Raw Sugar was 236,401 tons (of 2,000 lb.), as compared to 264,745 tons (of 2,000 lb.) for the year ending September 30, 1914. The yield of sugar from a ton of cane was approximately 10 per cent. less this year than the previous year, due to the unseasonable weather conditions during the grinding season, especially in the Eastern Provinces.

The following table presents a detailed comparison of the tons of cane ground and the year's output of Raw and Refined Sugar for the last two years :—

	1914–15.	1913–14.
Cane Ground	2,218,168 Tons	2,215,725 Tons
Raw Sugar Production :	(Bags 320 Lb.)	(Bags 320 Lb.)
Chaparra...	525,088 Bags	616,179 Bags
Delicias	315,872 ,,	492,662 ,,
Tinguaro	236,956 ,,	197,240 ,,
United	84,472 ,,	66,606 ,,
Mercedita	93,617 ,,	88,447 ,,
Constancia	196,055 ,,	162,861 ,,
Gramercy, La	25,447 ,,	30,663 ,,
Total	1,477,507 Bags or 236,401 Tons	1,654,658 Bags or 264,745 Tons
Refined Sugar Production :		
Cardenas Refinery, Cuba ...	14,713,144 lb.	13,043,392 lb.
Gramercy Refinery, La. ...	154,954,482 ,,	134,404,783 ,,

The net profit of the Company for the fiscal year was $5,594,047.97, after charging $788,496.95 for depreciation on buildings, machinery and equipment.

We have continued our policy of amply providing for doubtful Colonos accounts, and have written off the yearly proportion of the cost of plantings and all expenses in the cane fields where renewed plantings were required.

Your Directors have under consideration a readjustment of physical values of all buildings, machinery and equipment by a detailed appraisal, and to provide against every contingency the sum of $2,000,000 has been appropriated and transferred from the Surplus Account to the "Reserve for Depreciation."

Regular quarterly dividends were paid on the Preferred Stock, completing the dividends to September 30, 1914; further, on July 1, 1915, 1¾ per cent., and on October 1, 1915, 5¼ per cent., were paid, being the dividend of 7 per cent. accumulated to September 30, 1915.

On November 17, 1915, a quarterly dividend of 2½ per cent. was declared on the Common Stock to stockholders of record on December 15, 1915, payable January 3, 1916.

$179,000 of the Cuban-American Sugar Company's Six per Cent. (6%) Collateral Trust Gold Bonds were retired by the operation of the Sinking Fund provision of the Collateral Trust Indenture, making a total of $884,000 of these Bonds retired in this manner, and leaving outstanding on September 30, 1915, $9,116,000.

The capital outlay during the year amounted to $1,175,490.95. These expenditures were made to provide the most approved and necessary devices that may be employed to increase the yield of sugar and lower the cost of production; to acquire about 35,000 acres of virgin land adjacent to our holdings in the extensive area of the Chaparra properties, and additional railway lines and equipment in order to care for the increased tonnage of cane and its products. New warehouses for the storage of sugar have been constructed, and suitable buildings for the conduct of our commercial business have added largely to the convenience and profit of this important department.

The improvements and additions stated in the foregoing serve to maintain and strengthen your property in all its parts, and offers our best guarantee for an increased output and continued progress.

Extensive new plantings have been made and a large acreage brought under a system of irrigation.

Our fields to-day indicate a tonnage for the ensuing season of unequalled proportions, assuring a record production and a confident outlook for a prosperous year.

The accounts of the year have been examined by Messrs. Lovejoy, Mather and Hough, Public Accountants, and their certificate is made part of this report.

Respectfully submitted by order of the Board,

R. B. HAWLEY, *President.*

CERTIFICATE OF ACCOUNTANTS.

To the President and Directors of
The Cuban-American Sugar Company:

We have examined the books and accounts of The Cuban-American Sugar Company and its subsidiary companies for the year ending September 30, 1915, and hereby certify that the annexed Consolidated Balance Sheet has been correctly prepared therefrom, and, in our opinion, sets forth the true financial position of the companies as at that date, and that the relative Profit and Loss Account correctly shows the results of the operations for the period.

The Stock of Raw Sugars on hand has been valued at the net price subsequently realised, and the Refined Sugars at cost or at market price at September 30, 1915, whichever was the lower.

LOVEJOY, MATHER AND HOUGH,
Public Accountants and Auditors.

55 Liberty Street, New York City,
December 2, 1915.

MEETINGS
OF PUBLIC COMPANIES.

LONDON AND RIVER PLATE BANK, LIMITED.

THE fifty-third ordinary meeting of the London and River Plate Bank, Limited, was held on December 21 at River Plate House, E.C., Mr. E. Ross Duffield, the Chairman, presiding.

The Sub-manager and Secretary (Mr. George R. Hutchinson) having read the notice calling the meeting and the auditors' report,

The Chairman said that the directors were glad to present accounts showing an improvement in the last six months upon those preceding, when the Bank had to cope with extreme depression in all branches of business other than the export trade, which had shown great activity at very favourable prices in Argentina and Uruguay, and in the financing of which the Bank had had a considerable share. Business enterprise, however, was still—and they knew must so continue for some time—greatly fettered everywhere by the clouds cast by the War.

Gradual Resumption of Activity.

There was, nevertheless, a growing impression that appearances pointed to a gradual resumption of activity in those countries where the Bank was chiefly interested—no doubt founded upon the promising state of affairs, agricultural and pastoral out there, which justified looking forward hopefully if the weather continued favourable. At all events, the position of the Bank was sound and strong. They had had to provide again this year for some large losses arising mainly from their South American branches' business; they had also to write down their securities so as to face the general decline in quotations on this side; and they had had some losses in connection with their valuable French business. All of this had been met chiefly out of the year's profit, and, to a moderate extent, out of their useful contingency fund and their balance brought over from last year. They had thus been enabled to improve the final dividend and to show a gratifying carry-forward, while their assets, to the best of the director's belief, might be safely looked upon as representing the value at which they stood in the books of the Bank, for the board's rule continued to be to make ample provision for all known bad and doubtful debts. An important feature, as reflecting upon this value, was the fact that, owing to the failures which had occurred so largely, the position generally had been greatly cleared and benefited.

The Available Profit.

There was an available balance of £497,675 odd to deal with, which included, of course, the balance brought over from last year, and they showed in profit and loss account the amount of income tax incurred—namely, £46,978—and also that of depreciation in the value of securities held in London, provided for by £29,652. As the interim dividend foretold, the directors had at last had to relinquish their time-honoured custom of paying the shareholders' dividends free of income tax; earning power at the present time did not admit of it. The directors were the more gratified, therefore, that circumstances had enabled them, with the devoted help of their managers and staff abroad and at home during a period of marked difficulty and anxiety, to recommend that day a dividend of 9% for the six months, bringing the distribution for the year up to 15%. They regretted that in order to achieve this 15% they had not been able to carry forward to next year an amount equal to that brought forward from last year, but they thought the present £260,975—the amount they had for the purpose—commensurate with the risks the Bank contingently incurred. He hoped the figures shown in the balance sheet pleased the shareholders. An interesting point was that, notwithstanding the War, the total figures showed an increase over those of last year, and so did those of their deposits. It was their custom to be very strong in their cash in hand, so their balance of £9,519,000 was what the shareholders might have expected—very close upon 50% of their total deposits—while their bills receivable and discounted, loans and securities, all of first-class nature, stood out effectively at £20,800,000. There were also the bills receivable which remained over from the large amount held by the Bank when war broke out; they were continually being reduced and gave the directors no uneasiness as regarded eventual payment. With respect to the outlook for their business this next year, the Press was so fully informed in these times upon the state of business affairs and statistics in all well-known countries that there was hardly anything he could say regarding that group in South America which claimed their attention which was not continually put before them in their daily newspapers, and what they had read there recently would have given them an encouraging impression as regarded the general features. He concluded by moving the adoption of the report and accounts.

Mr. David Simson seconded the motion, which was carried unanimously after the Chairman had replied to a few questions, and resolutions were also passed declaring the final dividend mentioned and re-electing the retiring directors and auditors.

The meeting closed with votes of thanks to the managers and staffs and to the Chairman and directors.

WESTERN AUSTRALIAN BANK.

THE one hundred and forty-eighth half-yearly meeting was held on November 3, 1915, at the Banking House, St. George's Terrace, Perth, Mr. W. T. Loton, Chairman of Directors, presiding.

The Chairman, in moving the adoption of the report and balance sheet, said that, although the State had been suffering from the effects of the long drought and the partial failure of last harvest, the business operations of the Bank had been steadily maintained. Compared with the position for the corresponding half-year, September 1914, they would find that the total deposits then stood at £2,433,352, and at the present time at £2,445,201, an increase of about £12,000. In September 1914 the total amount of advances was £2,462,069, as against £2,456,956 on the present occasion, being a decrease of about £5,000. A year ago the total amount of coin, bullion and Australian notes was £815,284, and at the present time £853,379, an increase of about £38,000. He thought these figures should be considered fairly satisfactory, the most important fact being that the business had been kept so very steady. The result of the half-year's operations showed a profit sufficient for the payment of the usual dividend, and an increase to the reserved profits. The State had been favoured with abundant falls of rain, and the coming harvest gave promise of being a bountiful one. He had noticed accounts of some small failures, caused by red rust, &c., but they hope that this would not prove to be very extensive. In fact, all the State's primary industries—pastoral, agricultural, mining, fruit culture, &c.—should be in a flourishing condition, and there should be ample opportunity for employment for all who could and would work, and the Government having partly or wholly commandeered the shipping

and timber businesses, that ought to be a warranty that there would be no waste or friction in the future in that connection. There was, however, another side to the picture. The terrible war, and he feared he might add, local extravagance and excessive expenditure, were rapidly increasing the taxation, which would be a heavy burden to be borne by all, and it seemed to him that now was the time to avoid waste, luxuries and extravagance, and to practise economy, thrift and industry, if they were to make Australia a prosperous nation.

Mr. H. Hocking seconded the motion, which was put to the meeting and carried.

AMALGAMATED PRESS, LIMITED.

THE ordinary general meeting was held on December 20 at the Memorial Hall, Farringdon Street, E.C., Mr. George A. Sutton (the Chairman) presiding.

Mr. J. R. Sumpter (Joint Secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—I think the shareholders will agree with me that it is a matter for congratulation that we are able to come before you to-day and tell you that this Company is in a position to pay the same dividend as in previous years, in spite of the trying and difficult times through which the business world is passing, and the journalistic world in particular. As you will have seen from the report, the profits, after writing off depreciation of plant and buildings, amount to £326,836 6*s*. 4*d*. This achievement is one that has not been equalled by any other publishing firm in the country. Most publishing businesses, if they have not passed their dividends altogether, have, at any rate, reduced them.

Pre-eminence Maintained.

I ventured last year to suggest that this business, which is the largest periodical and magazine publishing firm in the world, backed by its enormous paper-mills, would maintain its pre-eminence. So far it has done so, and I hope and believe that during the coming year it will continue to occupy the premier position. It should not be forgotten, however, that the task of conducting the business has been a difficult one. In addition to shortage of staff and labour, your directors have been faced with a great increase in the cost of everything necessary for the production of your journals—paper, ink, carriage, labour, everything in fact, has advanced, and the longer the War continues the more these expenses must advance. In former years the permanent nature of your periodicals and magazines has often been referred to. The fact that many of them have increased in circulation during the past twelve months proves that there is nothing ephemeral about them. Our advertising revenue, of course, has suffered, in common with every periodical and newspaper in the country, but the papers themselves have maintained their position, and this fact has done a very great deal to convince advertisers that home journals like ours appeal to the very people they desire to reach. As a result, advertisers will, I hope, devote more of their expenditure to this class of medium in future.

The "London" Magazine.

Here I would like to say a word to advertisers about the *London Magazine*. The *London Magazine* has jumped into the very front rank of British magazines. We have recently made public the chartered accountants' certificate showing the circulation for a period of twelve months, and we believe that the *London Magazine* has now the largest certified circulation of any magazine in this country. Two hundred and forty-seven thousand copies of the Christmas Number were sold, a record not accomplished by any other Christmas magazine. Advertisers who wish to have these figures can obtain them from us on application. Another of your magazines, the *Premier*, has become the most popular story magazine in this country. Though it was hardly established when the War started, the circulation is steadily increasing. Your other magazines, the *Red Magazine* and *My Magazine*, are doing equally well, I am glad to say.

Employees Enlisted.

When I had the pleasure of meeting you last year I mentioned that over 300 of our employees had joined His Majesty's Forces. Since then a further 177 have done so. We have already paid out between £15,000 and £16,000 in allowances. I am happy to say that our colleague on the board, Mr. W. F. Mildren, who, together with many of our employees, has been at the Front practically ever since the start of the War, has recently been promoted to the rank of Lieutenant-Colonel. (Applause.) In addition, two employees have received Distinguished Conduct Medals, and another the Military Cross. Having regard to the large number who have enlisted you will recognise that the carrying on of the concern in the past year has not been an easy one for the directors, and it is due to the splendid organisation of your business that we are again able to show such satisfactory results. We regret that during the year under review Lord Northcliffe and Lord Rothermere retired from the board, but we are happy to say that the benefit of their counsel and advice will still be at the disposal of the Company with which they have been so long associated. Under the Articles of Association Lord Northcliffe was entitled to retire from the board twelve years ago, and Lord Rothermere nine years ago.

The Supply of Paper.

Our programme for the starting of new publications, of course, had to be abandoned owing to the War, and must remain in abeyance; but we shall neglect no opportunity of strengthening the business whenever possible. Apart from the uncertainties and increasing cost the labour difficulties alone make it impossible at present to embark upon new ventures, and the best we can do is to solidify existing publications. We are fortunate in possessing such valuable investments as the Anglo-Newfoundland Development Company Limited, and the Imperial Paper Mills at Gravesend. The latter, as you know, are the second largest mills in this country. Backed by these Companies, and foresight in securing large stocks of raw material, there has never been any anxiety in the past year as to the enormous supplies of paper and pulp required for the production of your publications, a position in which no other similar organisation has found itself.

Confidence in the Outlook.

I said last year that it would be most unwise to make any prophecy regarding the financial year upon which we were then entering, and I can only repeat this statement to-day. But I will add that I look forward with the same confidence to the ensuing twelve months as I did at this time last year to the financial period that has just closed. At any rate, you can rely upon your directors devoting that energy and enthusiasm to their work which has always been one of the strongest assets of the business. In this connection it will be my pleasure presently to ask you to confirm the election to the board of Mr. Tod Anderson. He has been associated with our organisation for a period of about 20 years, and has thoroughly earned his promotion. We are constantly endeavouring to strengthen the staff by the introduction of new blood. Applications from ambitious men and women for either editorial, commercial, or advertising positions always receive our careful consideration. I now beg to propose: "That the report of the directors produced, together with the annexed statement of the Company's account at October 31, 1915, be now received, approved, and adopted, and that a dividend be now declared on the Ordinary shares at the rate of 50% per annum for the six months, making 40% for the year."

Mr. Arthur E. Linforth (Vice-Chairman) seconded the motion.

Tribute to the Management.

Mr. Hartley Aspden, J.P.: May I be permitted, as one of the oldest shareholders, to congratulate you, Mr. Chairman, and the board on the magnificent report which you have presented to us to-day? I am sure it has been a pleasant surprise to many of us to find that, after passing through a year of stress and storm, the Amalgamated Press has been able to maintain the same rate of dividend it has paid for the last 10 years. Such a record is, I think, unexampled in the whole history of journalism. We all remember the dark and troublous days of last year, when every business was trembling in the balance, and few of us, I think, would have been bold enough to predict at that time that the Amalgamated Press would not only maintain its splendid dividend of 40%, but actually be in a better financial position this year than it was at the end of 1914. Well, as an old member of the Amalgamated Press, and as one of its directors for over 12 years, I am quite certain that this grand result has only been achieved by hard and strenuous work on the part of the board and of the splendid staff under its control, and I am sure we shall all join in thanking the board for the way in which they have held the fort during one of the most trying years that any business has ever gone through. It only shows, ladies and gentlemen, if the Amalgamated Press can accomplish such wonders in times of war, that when the days of peace come round we can fairly hope that the Company will go on paying the same dividend for many years to come.

The Founders of the Business.

But while we are all glad to have such a good report, I think there is one touch of sadness in the fact that during the year we have parted with two of the most-honoured members of the board, Lord Northcliffe and Lord Rothermere. Those who, like myself, were associated with them in the early days of "Answers, Limited," know the magnificent work which they put into the business of this Company. They laid the foundations of this great business, they built up the superstructure, and if you want any monument of their work you have it in the position this Company has attained as the greatest publishing house in Great Britain, if not in the whole of the world. Well, as one who worked side by side with them in those early days, and who knows the vast amount of work they put into this enterprise, I think they have both earned a well-deserved leisure, for, as the Chairman pointed out, they were entitled to retire several years ago, but they stuck to the Company longer than they were obliged to do, and the fact that they retire now, whilst we are in the midst of a great European war, shows that the foundations of this

business have been well and truly laid and that we can safely place our confidence in the men whom they have trained to follow them. As that well-known newspaper, "Truth," said the other day, "Nobody who knows Lord Northcliffe can suppose for a moment that he would relinquish the chairmanship of the Company if its position were in any way unsatisfactory," and so we must take comfort in the thought that this business will remain in safe and efficient hands. I am sure you will all join with me in welcoming the new Chairman and wishing him as long and prosperous a career as his predecessor. I told him privately the other day that so long as he keeps up the dividend to 40% he will have a very easy time as far as the shareholders are concerned. Well, ladies and gentlemen, I am not going to propose any resolution, as there is already one before the meeting, but I hope I am voicing your sentiments when I say that we all thank Lord Northcliffe and Lord Rothermere very cordially and warmly for the high, honourable and successful manner in which they have managed this Company from its commencement to the present day, and I hope the board will convey to them the expression of our great regard and appreciation of their work.

"Stronger Position than Ever."

Mr. J. H. Panting: As one who has been connected with this Company since its inception, perhaps you will allow me to say "ditto" to everything that has fallen from the lips of Mr. Hartley Aspden. The remarkable thing that has always struck me in connection with this Company has been that, ever since it was first incorporated, it has never looked back; it has always gone forward, until now, on the occasion of the presentation of the nineteenth balance sheet, we find it, as Mr. Aspden and the Chairman have already said, in a stronger position than ever. We might well have looked forward to some decrease in its revenue during this terrible year, when we have been faced with a cataclysm such as the world has never before seen; but what do we find? We find that it has not only maintained its position, but even improved it, so that, in addition to the handsome dividend of 40% which we are receiving, we see that a most substantial addition has been made to the reserve fund, which now stands at £250,000. I think that is a very proud achievement on the part of any company. These results have been mainly due to a remarkable combination—a combination which you rarely find in so marked a degree in one family—the far-sighted genius and ability of Lord Northcliffe on the one hand, and the keen financial ability and genius of Lord Rothermere on the other. Sir, in common with every other shareholder present, I cordially welcome you as Chairman of our board. You know all the ramifications of this Company, because I suppose you have been associated with it for a longer period, perhaps, than any member present. The same may be said with regard to Mr. Linforth. I am sure every member cordially welcomes him to the position which he has so well earned. You, Sir, will have a very difficult task to follow in the footsteps of so distinguished an example; but we all feel perfectly confident that, difficult though the task may be, you will be perfectly sure to be successful.

The Chairman: I am extremely obliged for the kind words which have been uttered by Mr. Aspden and Mr. Panting concerning myself, and I can only say that I am sure the board will do their very best in the coming year, as they have done in the past. We shall endeavour to live up to the wishes expressed by Mr. Aspden with regard to the 40% dividend.

The motion was carried unanimously.

The Chairman next proposed that the election of Mr. T. Anderson to the board be confirmed.

Mr. J. Horace Newton seconded the motion, which was unanimously adopted.

On the motion of Mr. F. Bowater, seconded by Mr. Steele, Messrs. Turquand, Youngs and Company and Messrs. E. Layton Bennett, Sons and Company were re-elected auditors of the Company for the ensuing year.

The proceedings then terminated.

URUGUAY EAST COAST RAILWAY COMPANY.

THE seventh ordinary general meeting of proprietors of this railway was held at the offices of the Company, 1 Broad Street, Place, E.C., on Monday, December 20. Mr. G. Grinnell-Milne (Chairman of the Company) presided.

The Secretary (Mr. R. W. Worsley) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said that with regard to accounts No. 1—share capital and Debenture stock and bonds—£10,080 of the First Mortgage Gold bonds had been redeemed. The receipts and expenditure on capital account showed an amount of £68 19*s.* 7*d.* which was devoted to capital expenditure in the past year, and the balance of £1,788 15*s.* 2*d.* was carried to the balance sheet. As to the portion of the revenue account which was kept in Uruguay this showed on the debtor side that the severe economies which had been made had resulted in decreases in every item except maintenance of way and works, which was $3,400 up. Of course they could not afford to let the line get out of repair.

The Accounts.

On the credit side of the account, passenger traffic was down by about $10,000 and goods traffic by $22,000. Those losses in earnings reflected the condition of affairs in the country during the twelve months they were discussing. The balance brought down—$19,327—was some $21,000 less than the balance of last year. The revenue account, so far as it was dealt with in London, was kept in sterling. The first item of special interest on the debtor side was income tax—£2,256 14*s.* 1*d.*—a large figure, for which the War was responsible, and this compared with £927 7*s.* 2*d.* in the previous year. The French taxes also showed an increase, being £1,536 1*s.* 3*d.*, as against £1,280 odd in former years. The directors had obtained a reduction of the amount subject to taxation, but a rise in the rate made the result worse than before. On the credit side they started with $19,327, which was brought down as £4,112 4*s.* 9*d.*, instead of £8,721 2*s.* 4*d.* in 1914. This showed a falling-off of some £4,600, and the loss in revenue account was £2,679 13*s.* 7*d.*, and this sum was transferred to the balance sheet. Turning to the balance sheet on the debtor side, the figure of £3,428 18*s.* 11*d.* sundry creditors in London was made up of French taxes £1,607 17*s.* 10*d.*, income tax £1,446 12*s.* 9*d.*, and the balance of about £400 was comprised of amounts owing to the trustees, the Société Générale, &c. The renewals fund stood at the same figure as last year. On the credit side of the account, the cash in hand in Uruguay had since been remitted to London. The item of sundry debtors, Uruguay, £1,521 2*s.* 10*d.*, was made up of freight owing by the Government, some £773; amounts due by the Central Uruguay Railway £533 odd; and a balance of about £200 off represented small current debtors. The stores in Uruguay and in transit amounted to £4,568, and were about £3,000 less than last year. The usual reference to £10,966 "B" Debentures of the Railway and Works Company, Limited, still stood in the balance sheet, but the board hoped that the future time should see some further payments on account of that security.

Conditions in Uruguay.

Under the circumstances prevailing in Europe and South America, he thought the shareholders would not have been surprised at receiving an unsatisfactory report on that occasion. With regard to Europe, he need say nothing more; but the conditions in Uruguay during the period they were considering were worthy of a moment's attention. One might roughly gauge the prosperity of a country by a glance at the Customs returns. The Customs returns for Uruguay for 1914-15 showed a revenue of £2,275,000, as against £3,302,000 in the previous twelve months, being a reduction of 28%. The trade, as indicated by those figures, had fallen away to a very large extent, and was, in fact, in a state of extreme sluggishness, caused largely by the feeling of uncertainty resulting from the European War and the consequent financial stringency. Large decreases were noticeable in the figures of most articles exported from Uruguay, including even live cattle; but the frozen meat proved a great exception, that being the form in which the European belligerents took the Uruguayan cattle. The report referred to the complete failure of the wheat and barley harvest resulting from the very unfavourable weather which had prevailed in the country. Serious attention had been given to agriculture by the State, and it had been sought to encourage it in a scientific manner, which should give it an impetus in the future. The figures of shipping tonnage in and out of the Republic showed considerable decreases, and prices had risen. The wool farmers had experienced disappointment in the loss of sheep owing to epidemics. In spite of the depressing conditions in Uruguay, the directors had hoped to avoid the relatively large deficit—the first deficit which the Company had shown—but they regretted they had been unable to do so. As they showed a deficit of £2,679 13*s.* 7*d.*, they failed to expend £2,590 in the redemption of bonds under the terms of the Sinking Fund. The directors had approached the larger holders of the First Mortgage Gold bonds and the Debenture stockholders, and a scheme would shortly be laid before the parties interested. Reports up to the latter part of November showed signs of returning improvement in the general traffic, and there were sensible increases in some of the Company's sources of revenue. The new President, Dr. Feliciano Viera, had already given active attention to the trade and agriculture of the country, and the Company's relations with the Government had always been and continued cordial. The improvement in economic conditions should be a guarantee for the continuance of increases in traffics, and a recent cable informed the board that the Uruguayan Senate had passed a Bill sanctioning the construction of a line from San Carlos on the Company's road to Rocha, but this was hardly a propitious time for financing railroad extensions.

Mr. Guy Hannaford seconded the motion, which was agreed to unanimously.

The retiring director (Mr. B. H. Binder) was re-elected, the auditors re-appointed, and the proceedings terminated.

RONEO, LIMITED.

THE eighth ordinary general meeting was held at the offices, 5 11 Holborn, E.C., on December 21, Mr. W. T. Smedley presiding.

The Chairman, in moving the adoption of the report and accounts, said that, notwithstanding that the year's accounts included a period of 11 months of the War, the trading profits had been £30,135, as compared with £39,368 1*s.* 4*d.* in the previous year, and that the diminution was apparent rather than real. During the previous year upwards of £6,000 had been properly charged to capital account for additions to plant, &c., but during the year under consideration all expenditure had been borne by the revenue account. Moreover, the accounts had been charged with payments to the extent of £1,606 to the wives and dependants of employees who had joined the Army. The net profits were ample, without encroaching on the amount brought forward from the previous year, to provide for the payment of the usual dividends on the Preference and Ordinary shares and provide a substantial increase to the reserve fund, but the directors had felt it incumbent on them, in these times of financial stress and danger, to adopt a policy of extreme caution and to devote all their resources to strengthening the position of the Company. With the balance brought forward there was a sum of £31,426 3*s.* 1*d.* of undivided profits available. There were also surplus profits which had been set aside in previous years, represented on the balance sheet as general reserve £20,000, and special reserve against interests in allied and proprietary companies £10,000, making a total of £61,426 3*s.* 1*d.* Two years ago, after the Balkan wars, the directors had grave misgivings as to the future of the Austrian and Hungarian companies, which had suffered severely, and it was on this account that the special reserve was commenced. The business of those countries was placed in the hands of a substantial and experienced agent, and this Company thereby reduced its responsibility. But the outbreak of the present War had rendered it necessary to deal drastically with the situation, and the directors had therefore provided to write off, if necessary, the whole of this Company's investment in and the debts due to it from both these companies, without putting any value on the stock and book debts existing when war broke out, to the estimated value of upwards of £20,000. The items appearing on the asset side of the balance sheet as expenses attending increase of capital (£9,000) and new branch establishment fund (£5,176 2*s.* 5*d.*) would also be written off, and the item of patterns, patents, &c., reduced. These alterations would have the effect of making the balance sheet exceptionally sound. The dividend on the Preference shares had been paid, and there would remain £955 18*s.* 3*d.* to be carried to the next year's account. There was no need to carry forward a larger sum, for, with the five months' experience of the present year, there was no doubt but that the year would establish a new record for profits.

The report and accounts were unanimously adopted.

THE TANALYK CORPORATION, LIMITED.

THE third ordinary annual general meeting was held on December 21 at Winchester House, E.C., Mr. Leslie Urquhart (the Chairman) presiding.

Mr. J. P. B. Webster (London Manager and Secretary) having read the notice and the report of the auditors,

The Chairman said: I do not think that the accounts before you call for any special comment from me. The interest and other receipts, principally in connection with our advances to the South Urals Company, have been sufficient to cover our London charges, including Debenture interest. During the year covered by the accounts now before you the capital of the South Urals Company was increased by the issue of 19,200 shares of Rs. 250 each, and the whole of that issue was taken up by this Corporation. As a result the shares in the South Urals Mining Company now stand on our books at a figure of £695,263. There is one item in the balance sheet, namely, Loan from Discount Bank, Petrograd (£30,969), to which I will refer later.

The Labour Supply.

At our last meeting I told you of the difficult time through which we were passing owing to the effects of the War. The position in this respect has not improved, and especially in the matter of labour we have been greatly affected. When the War broke out we had almost completed our construction programme and had hoped to obtain from the surrounding districts the additional labour necessary for exploitation work. Not only has this been impossible, but we have lost one-half of our workmen and employees. Although our copper goes to assist the Russian Government, it is not sold by us direct but through the medium of a refining company; consequently at the outset we were handicapped by not receiving that support which the Government afforded to other copper producers. In view of the nature of our work the Government has now allowed certain of our employees to be freed from military service, and has also supplied us with 250 Austrian prisoners of war, who are working at the copper and cyanide plants; but with these men we have to contend with the difficulty of language; the majority of the men are quite unskilled, and, moreover, we can hardly expect them as prisoners of war to put their hearts into the work, whereas the men taken from us had been properly trained during the previous years at Tanalyk. The whole of the Russian machine works have been mobilised by the Government, causing great difficulty in fulfilling machinery orders, and the preference which is naturally given on the railroads to military supplies causes delays in delivery of goods for private enterprise. Despite this I am pleased to say that since last meeting we have not only kept the copper reverberatory furnace in continuous operation, but have completed the cyanide plant for the treatment of our gold ores, and have also erected and put into operation a second copper-smelting plant, consisting of two small blast furnaces.

Transport.

As you know, our mines and smelters are some 250 miles distant from the railway, and we are therefore dependent on horse transport for the delivery of materials, coke, &c., necessary for our mining and smelting operations. The Orenburg Government is to a large extent populated by Cossacks and Bashkir. The Cossacks were mobilised early in the War, and, being cavalry and under their terms of service obliged to supply their own mounts, large numbers of horses were taken. In addition to this, the Government mobilised and took away for army purposes very large numbers of horses from our district. The Bashkir Mussulman population is extremely thriftless; the horses are allowed to keep themselves alive by what they can feed on underfoot on the Steppe, and were therefore only available to a limited extent for local carting. All this has very greatly hampered our transport of goods from the railway. We have to an extent met the difficulty so far as our local transport is concerned, and also the transport of more important goods from the railway, by purchasing some 350 horses for our work. The shortage of horse transport prevented the delivery of regular supplies of coke, and we have been unable to keep the blast furnaces in continuous work; and I fear we must look forward to irregular operations of this part of the plant until we can make certain of a continuous supply of coke. Another difficulty with which we have to contend is the shortage of staff in the accountancy departments. The chief accountant was called up at the beginning of the War, and also many of the office employees; consequently, the accounts are some months behindhand, and we cannot quote actual book figures to cover the more recent work.

Results of Prospecting Work.

To deal first of all with the prospecting work. As you know, our right to take up claims under the original 70 years' lease contract expires next spring, and our efforts have been almost entirely confined to the examination of the more promising outcrops, with a view to bringing them into our lease, so that they can be further dealt with at our leisure. With the small geological staff available we have of necessity limited our programme to this, and but little has been done in the important work of studying the continuation of the present known ore bodies. Further work on the North Euluke Outcrop, to which I referred at the last meeting, has not met with success, for, although our head geologist was most optimistic regarding the possibility of a large ore body, we have not so far found the continuation of this outcrop in depth. At the South Euluke Prospect certain promising indications have been found, justifying further work. Considerable progress has been made with the development of the Ulali Prospect referred to at the last meeting. This is now a mine of considerable value, the ore averaging about 6% copper, with valuable gold and silver contents, and will increase the output from our copper plants and reduce the cost of the product. We are now opening up the 210-foot level at the mine, and there is reason to anticipate that further work here will permit us to quickly block out a quantity of valuable ore, which we have not brought into our proven reserves at the present time.

A Prospect of Great Promise.

Another prospect of, I must say, great promise is that of the Tuba Mountain, which lies 25 miles north of Tanalyk in a district hitherto unexplored. Here we have an outcrop of over 1,000 feet in length, on which we have driven so far for some 300 feet, at a depth of 60 feet to 65 feet below the outcrop. The width of the drive is about 6 feet, but does not anywhere touch either the foot or hanging walls, and two cross-cuts show widths of 12 feet and 40 feet respectively. The oxidised ore, where driven on, has been sampled for 160 feet, showing very regular tenor, and averaging 1.1% copper, 76 dwt. gold, and 23 ounces silver per ton. Advice received since the date of Mr. Brown's report states that the first borehole, at 160 feet vertical depth, cut the vein, showing a width of 26 feet, the ore still being oxidised; no core was recovered, and therefore I cannot give you the assay values. A second borehole has now been started to cut the sulphide zone. In order to give you some idea of the possibilities of this mine, I may state that a solid sulphide ore body, only 300 feet long by 10 feet wide, would give 30,000 tons per 100 feet of depth. This prospect was only discovered during last season's geological work, and it is too early to make any definite statement, although it will not require much

ore of the value so far shown in the oxidised zone to make this a very valuable mine. The Managing Director of the South Urals Company intends to treat, during 1916, 5,000 tons of the oxidised ore which we are developing at present. You will realise how valuable the ore is when this small quantity alone represents over £100,000 in gross value, the greater part of which is profit. Mr. Gilman Brown, in his report, taking quite correctly the engineer's point of view, implies that we can hardly expect sulphide ore of this value in precious metals, though the copper content is likely to be higher. I do not wish to raise false hopes, but our opinion is that we have fair reason to believe that we have here encountered an ore body more important than any we have yet discovered on our properties.

Ore Reserves.

The position at the mines is satisfactory. The shortage of labour has only permitted ore production for current requirements, and but little has been possible towards development of new ore reserves. Nevertheless, the latest estimates of ore reserves show that we have 108.000 tons of copper ore and 140,000 tons of gold ore, a total of 248,000 tons of developed ore. This compares most favourably with the position a year ago, when our net ore reserves stood at 185,000 tons. When it is remembered that during the year we have treated 32,000 tons of ore, the position must be deemed most satisfactory, for the small amount of development work which shortage of labour permitted during the year added more than 50% to the developed ore and increased the net ore reserves developed by more than one-third. As I have told you at previous meetings, the friable nature of the ore does not permit of our accepting diamond-drill results as conclusive. The figures of reserves given are, therefore, of ore actually proven and developed at the present moment, and are subject to addition as development proceeds. In stating the present reserves no allowance has been made for extension in depth of the Mambet mine, where a borehole 100 feet below the bottom level shows that the ore continues. Only part of the ore in the Ulali mine has been included, and Tuba Mountain has been entirely excluded.

The Smelting and Cyanide Plants.

The copper-smelting plant now consists of the reverberatory furnace and two small water-jacketed blast furnaces, which have been purchased and erected since the last meeting. It was our original programme to add a second reverberatory furnace, but the opening up of ore in the Ulali mine eminently suitable for treatment in blast furnaces caused us to alter our plans and to instal the water-jacketed furnaces, as providing a much more flexible plant. The total capacity of both plants is 150 tons of ore daily, but while the War continues we cannot rely on reaching this figure of through-put, owing to the difficulty, which I have already mentioned, in obtaining regular supplies of coke for the water-jacketed furnaces. I feel that this change in our programme was well warranted, and that the advantage of this will be shown when we return to normal conditions. Owing to the difficulties in the delivery of machinery and materials, the cyanide plant was only completed in July last. It has since been running intermittently, as we have not yet been able to obtain the requisite stock of materials to ensure continuous working, but the results so far obtained from the plant are considered quite satisfactory. Certain experiments which have been made recently lead us to expect that the capacity of the plant and the recovery of gold can both be materially increased by certain alterations, but these alterations involve small machinery additions to the plant which cannot be obtained at the present time.

Coming Year's Programme.

With regard to our programme for the coming year, the Managing Director of the Russian Company estimates to produce about 1,000 tons of copper, with the usual high gold and silver values; but the difficulties we are experiencing in the supply of fuel and materials have led us on this side to reduce this to the still more conservative estimate of 600 tons output. The former average of precious metal values will be materially increased if we include ore from the Tuba Mountain. Efforts will be made to keep the cyanide plant in continuous operation, but here again allowance must be made for difficulties in supplies. At our last meeting I stated that with the cyanide plant in operation we should be earning profits at the rate of £100.000 per annum. This estimate still holds good, and, despite intermittent working of the cyanide plant, we are justified in looking on Mr. Gilman Brown's estimate of 1,000,000 roubles profit during next year as a conservative statement, and this does not include any profit from the 5,000 tons of phenomenally rich ore from Tuba Mountain which will be treated next year.

The Financial Position of the Corporation.

It is necessary for me to say a few words regarding the financial position. At the present moment, owing to the conditions of which I have told you, the working of the plants is only intermittent, but the receipts are sufficient to pay all our current expenses, including preparation of new stocks of materials, and to leave a surplus. When we embarked on our new construction programme we had every reason to anticipate that the necessary funds would be provided from the issue of reserve shares and from the full and continuous operation of our plants, but the War made this impossible. In order, therefore, to finance the completion of the cyanide plant, the purchase and erection of the blast-furnace plant, and the capital locked up through the War in our gold slimes, arrangements were made in Russia for a credit of Rs. 700,000, of which a part has been brought into our balance sheet as loan from the Discount Bank, Petrograd, this loan being guaranteed by us. Other than ordinary current supplies accounts, this is our only indebtedness. I would mention that against this credit of Rs. 700,000 we have an amount of some Rs. 400,000 held up in the gold slimes, which, owing to the embargo laid on export of all gold by the Russian Government, we were unable to realise during this year. Arrangements are being made for the realisation of these slimes as soon as possible. The surplus from operations next year should permit of this indebtedness being cleared off and leave a good balance on the right side. Before concluding my remarks I wish to say how much we appreciate the services of the Managing Director of the South Urals Company, Mr. Kabanoff, who, as you all know, was the founder of the undertaking. Mr. Kabanoff is a shareholder with us in this enterprise, and since the War broke out he has unreservedly and at great personal sacrifice placed his services at the disposal of the business. I feel that to a very large extent Mr. Kabanoff has been responsible for keeping things going in these very difficult times through which we are passing, and I am sure you will agree with me that we owe him a very hearty vote of thanks. I now beg to move that the report and accounts now before you be received and adopted.

Mr. R. Gilman Brown, E.M , seconded the motion.

The Tuba Mine.

Mr. Francis Moore said it seemed to him that on the present occasion the Chairman had given the shareholders a great *bon bouche*, namely, the Tuba Mine, about which they knew nothing last year. Judging from what the Chairman had stated with regard to the extent to which this mine had been proved, it appeared to be an enormous mine, and one of which it was at present impossible to realise the prospects.

Mr. Gilman Brown, in reply to the last speaker, said he was very unwilling to say much more about the Tuba than he had said in his report. It had undoubtedly a very fine prospect indeed, and was certainly the best he had seen in the Tanalyk district, but so many points were uncertain—

such as what would be the tenor of the original sulphide below, and how much they would find the gold value exaggerated in the gossan, as it always was—that any estimate of costs and profits could only be a matter of guesswork, and as an engineer he did not like to guess. (Hear, hear.) It was a smelting ore of high value, and there was undoubtedly a handsome profit in this gossan, which should roughly represent, above the shallow 60-foot level, 10,000 or 15,000 tons of ore probably.

The Coal Mine.

In reply to Mr. Reid, the Chairman stated that the coal mine had been a great disappointment. At first it looked quite a favourable proposition, and they proved sufficient coal, as they thought, to last them as fuel for a number of years, but very great difficulties were experienced in mining the coal. There was an overlying bed of quicksands, which at first was comparatively small, but afterwards increased in thickness until it became very dangerous to continue mining operations. They therefore thought it well not to take any further risks, as it would have been a very costly matter to continue work there, but they were now opening another prospect about 30 miles from Tanalyk. It was, however, only a prospect so far, and they did not care to say anything further about it at present.

The resolution was carried unanimously, and the retiring directors and auditors having been re-elected, a vote of thanks to the Chairman and directors, as well as to the staff in Russia, concluded the proceedings.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

The sixth ordinary general meeting was held on December 20 at Winchester House, E.C., Mr. C. Greenway (Chairman and Managing Director of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Starting with the balance sheet, you will see on the liabilities side that the amount of paid-up capital stands at £2,750,000, as compared with £1,900,000 in the previous year, this augmentation of £850,000 being represented by £751,000 received from His Majesty's Government on account of the 2,000,000 Ordinary shares and 1,000 Preference shares subscribed for by them and by £99,000 received from the Burmah Oil Company, Limited, in payment for the 99,000 Preference shares issued to that Company.

Cost of Tank Steamers.

The only other item on the liabilities side of the account to which any reference need be made is, I think, that of bills payable. The amount of £70,489 1*s.* 7*d.* includes £46,450 for bills accepted in part payment for the fleet of tankers which is being built for the transport of our oil; but as a separate tanker company has since been formed to work the fleet this liability has since been transferred to that company. You will be pleased to learn that the prices at which we were fortunate enough to secure these boats are very little in excess of the average of pre-War prices, and that they are relatively fully £80,000 per boat lower than prices which we have recently had quoted to us for similar boats to be built in the United States. Turning now to the assets side of the account, the first item calling for remark is "Purchase price for concessions, &c." The addition to this item during the year has been £103,239 19*s.* 9*d.*, representing almost entirely further shares taken up in the Bakhtiari Oil Company, Limited. Under the next heading, "Refinery, tank installations, pipe-lines, &c.," you will see that we have again, owing to the difficulty of correctly allocating expenditure while so much work is in progress, reverted to the system of incorporating various items of expenditure which last year were shown separately. The new expenditure for the year under this more comprehensive heading was £431,631 16*s.* 1*d.*, which amount it is perhaps needless to remark almost entirely represents outlay in connection with the new programme of extensions now being carried out. £40,000 has been deducted for depreciation, this amount being, in the opinion of the board, a sufficient sum to write off in view of all the circumstances.

Result of the Year's Operations.

I will now ask you to turn to the profit and loss account. The balance of our trading account, as you will see, is £171,083 7*s.* 4*d.* This amount would have been about £74,000 greater had we included in it the amounts due to us by the Turkish and Persian Governments, but, although we have every reason for anticipating that the greater part, if not the whole, of these outstandings will sooner or later be realised, we have decided not to take credit for them in the meantime. After making allowance for these outstandings which may be regarded as purely adventitious we have, I think, every reason to be satisfied with the results of the year under review. The balance of the trading account would have been about £245,000, and, omitting the loss of £26,711 3*s.* 10*d.* carried forward from the previous year, since it will not be a recurring item, there would, after paying Debenture interest and home charges, have been a balance of about £200,000 available to meet depreciation and further payment of dividends. What the result may be for the current year it is still too early to prognosticate with any certainty in the present unsettled condition of Southern Persia. But notwithstanding the diminution of revenue resulting from our pipe-line having been out of use for two and a-half months of the present financial year, we may, I think, failing of course the happening of any untoward event, count upon being able to present at least as good a result as that now before you in our next annual accounts.

The Cutting of the Pipe-Line.

As mentioned in the report, our pipe-line was cut by some Persian tribesmen on February 5 last. This damage was perpetrated by a small tribe who inhabit a district which is traversed by our line for a distance of about 12 miles, and the damage was limited to the destruction of a few sections of pipe within this length of line. It took some time to repair the damage to the line, owing to the unsettled state of the country and to the whole of our transport being required for the military operations, but it was restored to full working order by the middle of June, and since then has been worked continuously. The amount of excess oil which had to be burnt, owing to lack of sufficient storage tanks and to avoid pollution of rivers in the four and a-half months during which we suffered from this enforced shut down, was, I am sorry to say, about 36,000,000 gallons, or 144,000 tons, but, as you will have gathered from the terms of the concession which I have just quoted, the Persian Government are liable to make good to us, and to the producing companies, the whole of the losses consequent upon the destruction of this large quantity of oil, and also for the extra expenditure to which we shall be put in consequence of the general interruption to our work which has been caused by this act of folly on the part of Persian subjects.

Mr. John T. Cargill seconded the motion, which was carried unanimously.

ASAHAN RUBBER ESTATES, LIMITED.

The third annual general meeting was held on December 20 in the Council Room of the Rubber Growers' Association (Incorporated), 38 Eastcheap, E.C., Mr. George Croll, Chairman of the Company, presiding.

Mr. J. M. Kemp, on behalf of the Secretaries, Messrs. Harrisons and Crosfield, Limited, read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: Our authorised capital remains at 260,000 shares of 10*s.* each and our issued capital remains at 229,803 shares, of which 229,722 have now been paid up to the extent of 9*s.* 6*d.* per share, and 81 are fully paid. If anything like the present prices continue during the current year—and I think it reasonable to anticipate that they will—we shall in all probability be able to postpone the calling up of the remaining 6*d.* per share until we enter the 1916-1917 period. The capital expenditure for the period under review amounted to £10,351 3*s.* 4*d.*, against an estimate of £12,179. The capital expenditure spread over the average immature area of 1,759 acres represents £4 14*s.* 9*d.* per acre, which shows a satisfactory reduction on the previous year, when the figure was £6 10*s.* 5*d.* The total capital expenditure on the properties to July 31, 1915, was £105,349 6*s.* 11*d.*, which, spread over the 2,464½ acres of cultivated land, gives us the figure of £42 15*s.* per acre. On July 31 we had a surplus at credit of capital account of £3,809, and if you approve of the proposal we make in regard to the disposal of last year's profits, we shall have £1,037 of undistributed profits to add, giving us £4,846 to meet an estimated capital expenditure of £11,264. This would leave a deficit of £6,418, against which we have our uncalled capital, but as our crops are increasing the proceeds of these should enable us to get through the current year without making any further call.

Low Capital Cost per Planted Acre.

I might mention that, when this company was reconstructed and came under its present management, it was anticipated that the then issued capital would be insufficient to complete the capital account and that it would be necessary to issue at least a portion of the 30,000 unissued shares, but as things have gone I think that, without calling upon the shareholders to forgo more than reasonable allocations to reserve out of profits, we should be able to bring the present acreage into bearing without any further issue. If this forecast proves to be correct the capital cost of our property at par would be £46 per acre—that is, when the capital account is closed and the acreage planted brought to maturity. This is not only a very low cost, but it is very much less than we could plant up and bring to maturity a similar property for to-day. A statement of the acreage is given in the report, and the only changes from that given last year are that the 318 acres then given as early 1912 planting are now included with the 425 acres then given as 1912-13 planting, and that a further 44 acres are added as 1913-14 planting, making our total planted acreage 2,464½ acres.

Output Increased: Costs Reduced.

The crop for the period amounted to 177,235 lb., against an estimate of 95,000 lb. This very substantial increase was mainly due to a larger number of trees coming into tapping than was anticipated. This crop corresponds

with 62,531 lb. harvested in the preceding year. The all-in cost, including war risk insurance, was 1*s.* 4.13*d.*, a reduction of 1.28*d.* on the preceding year, which, considering the large number of trees tapped for the first time, is, I think, very creditable to the management. The average gross price realised for the crop was 2*s.* 3.41*d.*, which is 2.75*d.* per lb. more than was secured for the previous crop. The profit for the year amounted to £6,412 12*s.* 8*d.*, and, with your permission, we propose to deal with that as follows: by writing off the balance of the preliminary expenses, amounting to £1,121 6*s.* 1*d.*; by writing off the balance of the underwriting commission, amounting to £1,525; by payment of a dividend of 2½%, less income tax, amounting to £2,728 19*s.* 3*d.*, and carrying forward £1,037 7*s.* 4*d.* At the beginning of the year 56,978 trees were being tapped, and by the end of July this number was increased to 90,745. The first latex is manufactured into smoked sheet, the quality of which is excellent. This represents 68%, and the balance of the crop is manufactured into crepe. The labour force has been satisfactory and the health good.

State of the Property.

The property is clean weeded and well drained, and our visiting agent, Mr. Ris, reports that the estate is all over in the best condition, and, from the growth of the trees and the yields which the tapped trees have given, has an excellent future before it. The crop estimated for the current year is 180,000 lb., and for the four months ended November we have harvested 74,134 lb., so that it would appear that our estimate is again on the very conservative side. Of this crop we have to date sold 11,404 lb. at an average price of 2*s.* 8.64*d.*, and we have to deliver under forward contracts 44,800 lb. at an average price of 2*s.* 4½*d.*

Mr. Payler: Is that London?

The Chairman: Yes. Both those prices are London. We have just received a telegram from Medan which states that the properties are in good condition throughout, and that the estimated crop will be fully secured.

Sir William Erskine Ward, K.C.S.I., seconded the resolution, which was adopted unanimously.

KWALOE RUBBER ESTATES, LIMITED.

The fifth ordinary general meeting of the Kwaloe Rubber Estates, Limited, was held on December 21 at the offices of the Rubber Growers' Association, 38 Eastcheap, E.C., Mr. Richard J. Arnold (the Chairman) presiding.

Mr. J. O'Neill, on behalf of J. A. Henderson and Company, Limited (the Secretaries), read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: We informed you last year in September that we expected to start tapping at the commencement of this year. This was done, and to March 31 last we harvested 2,238 lb.—a small beginning, but that is all there was for the period covering the accounts. Since then you will see that steady progress has been made and that we have never looked back during any single month, our last return—that for November—being 7,655 lb. This is, of course, no criterion of what our yield will be, for we shall now go steadily on adding fresh trees each month to the total of trees tapped; in fact, it is safe to say that our yield will steadily increase until our maximum yield is reached some five years from now. I put down this maximum yield at 600,000 lb. per annum, and I think it would be very fair to suggest that the yields will be 120,000 lb. for 1916, 240,000 lb. for 1917, 360,000 lb. for 1918, 480,000 lb. for 1919, and 600,000 lb. for 1920. This is approximately correct, and I shall be curious to see how nearly this estimate is achieved. I have been asked to estimate the "all-in" cost, but this is a great deal more difficult than to estimate the yield, for so many of our charges are percentage charges, which are naturally higher when rubber stands higher in the market, so that I cannot predict "all-in" costs without at the same time fixing the sale price. Moreover, there are at the moment several abnormal charges, such as freight, war risk insurance, and other charges, which are very different to what they were in the piping times of peace. I will therefore confine myself to giving you an estimate of what our rubber should cost f.o.b. Sumatra, gathered from experience on other estates and the special conditions of labour and other factors applying to our particular estate. I put our f.o.b. cost at 1*s.* 2*d.* for 1916, 1*s.* for 1917, 10*d.* for 1918, 9*d.* for 1919, and 8*d.* for 1920—perhaps even slightly less. Rubber prices, however, I must decline to forecast, as we all have different views, and in any event any estimate would be blind guessing. It becomes doubly difficult with the recent enormous rise in the price. I venture, however, to suggest that we might make 1*s.* per lb. profit on the 1,800,000 lb. of rubber which we shall harvest during the next five years. This would mean £90,000 for that period, or an average of £18,000 a year. Worked out on a percentage basis, this is an average of over 14% on our capital. Another way of estimating the value of our estate is on an acreage basis, and in conjunction with my colleagues we have arrived at a figure of £75 per cultivated acre. This would make our property worth about £130,000, which means that our shares are worth slightly over par. We are already making rubber of most excellent quality, so we need have no fear of our goods not being saleable at a fair price. With the labour market, too, I think we are quite safe. We have still to spend something on equipment and factory as our crop increases, but this will not be very much, and hardly makes any impression on the figures I have quoted. You will notice that I have given you figures for calendar years. Unfortunately, our financial year ends on March 31. We are here in good company, as it is the Government's financial year, but it makes many estimates, comparisons, and calculations very difficult, and your Board have decided to alter this and close our books again on December 31, which means that we shall have another meeting in the spring or early summer, and then we shall be in line with other rubber companies. This is all the more desirable, as you will see that we have yielded to the pressure of several of our large shareholders to alter our shares to 2*s.* shares. Why this should make a difference it is difficult to say, but I predict that your shares will be worth considerably more when the change is made. Believe me, they are worth very close to par, and remember also that he who buys now has no income tax to pay on the rise between now and par which must assuredly happen; if not, half the rubber companies in the list would have to decline to under their par denomination.

Commander A. J. Farquharson, R.N., seconded the resolution, which was carried unanimously.

NEW SCHIBAIEFF PETROLEUM COMPANY, LIMITED

The second annual general meeting was held, on December 22, at Winchester House, E.C., Mr. G. Grinnell-Milne (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Turning to the balance sheet on the debtor side, there are no new items and there is little to explain. The entry, "Interest suspense," represents interest owing to us by the Russian Company, S. M. Schibaieff and Company, but not yet paid. On the credit side of the account you will note that preliminary expenses have been written off to the extent of £3,824 1*s.* 10*d.*, and now stand at £11,472 5*s.* 6*d.* I would call your special attention to the item "advances to S. M. Schibaieff and Company, £60,109 8*s.* 4*d.*," and to the fact that this loan to the Russian Company has been reduced from £205,163 5*s.* 5*d.*, at which it stood in the accounts submitted to you last year.

Cash Position.

On the other hand, the cash on loan in Russia, London, and at bank in London now amounts to £196,869 5*s.* 8*d.*, as against £2,664 14*s.* 8*d.* in the previous year's accounts. Thus the cash figure is not only increased by the sum of about £145,000 repaid to us by the Russian Company, but by some £46,000 of profits for the year. I would call your particular attention to the note at the end of the balance sheet referring to the starred item £108,000 on loan in Russia. As will be seen, we have ample funds in London, and therefore do not require to remit this amount, but the auditors very properly call attention to the fact that if this necessity had arisen at the end of the financial year the yield in sterling would have been some £18,000 less than that shown in the balance sheet. To-day, as you are aware, the value of the rouble has still further depreciated, so that the yield on a transfer at the moment would be correspondingly less. Turning to profit and loss account, on the debtor side, directors' fees, salaries, stationery, &c., and 25 of preliminary expenses written off require, I think, no further explanation. On the credit side the first item, interest on Debentures, £11,000 odd, represents the interest on these Debentures of S. M. Schibaieff and Company, which, as you are aware, came into the possession of this Company on the reconstruction. The dividend on shares of S. M. Schibaieff and Company, 390,000 roubles, or £33,913 0*s.* 10*d.*, would, at the normal rate of exchange, have stood to the credit of profit and loss account as £41,000 odd. We have, however, taken it at the "exchange of the day," April 13, at 11.50 roubles to the £, thus reducing the sterling equivalent by over £7,000. On the other hand, you must not forget that, before arriving at this dividend, a large sum was set aside as reserve by the Russian Company for depreciation of its properties in Russia.

Production Well Maintained.

The production from our oilfields has been well maintained during the year under review, but, as we have indicated more than once, we do not desire to depend for our future on these old and, in most cases, diminishing sources of production. We are, therefore, as you are aware, looking in other directions for further supplies of crude oil. The new fields acquired in the Shirvan Steppe, and mentioned in our last year's report, are extremely interesting, but, in consequence of the calling up for military service of many of our best men, we stopped work on our own wells in that district. We have, however, a half interest with the Société Bnito in the other two wells referred to, and on these work has been continued. In the first of these wells oil indications were met with at about 1,800 feet, and it is hoped that payable oil will be obtained at a greater depth. The present depth is, as the report states, about 2,550 feet. In the other well, which has already reached

the depth of 2,700 feet, we are waiting for the arrival of a suitable drilling rig—rotary system—in order to sink to a depth of some 500 or 600 sagenes, in accordance with the advice of our geologists. I would particularly call your attention to the list of oil lands on page 9, most of which are old fields, from which production has been hitherto obtained, but Sea plot No. 32, which has not yet become productive, is one of some interest.

Current Year's Operations.

You may be interested to hear some figures of the working of the present year 1915 since March. Our production for seven months to the end of October was 3,029,620 poods, against 2,890,886 for the same period of 1914. Our profits for five months are quite good, and compare well with last year. We have drilled 74 sagenes, against 155 in 1914, with a shortage of labour. As stated in the notice of the meeting and in the report, we propose paying a dividend for eighteen months on the Cumulative Preference shares, say, up to the date of the accounts, and if the necessary resolution is passed the warrants for this dividend will be issued to-morrow. At the same time we regret we are not in a position to pay anything to the Ordinary shareholders, but we hope they will find some small consolation in the report we put forward to-day and in the considerably improved position which our accounts show as compared with those presented a year ago.

Mr. H. N. Benjamin seconded the motion, which was carried unanimously.

The Chairman next moved that the dividend on the Preference shares for the period October 14, 1913, to April 13, 1915, at 5% per annum, be paid.

Mr. E. Hume seconded the motion, which was agreed to.

MISCELLANEOUS

Allynugger Tea.—Interim dividend of 5%, less tax, on Ordinary.

Assam Dooars Tea.—Interim dividend of 5%, on Ordinary, less tax.

Assam Frontier Tea.—Ad-interim dividend of 4% on Ordinary.

Boxing Day, Dec. 27th, 1915.

The ordinary week-day services will be in operation.

The London General Omnibus Co., Ltd.,
Electric Railway House,
Broadway, Westminster, S.W.

Messrs. Kelly's Directories, Limited, are to be congratulated on the promptitude with which, in spite of the general disturbance caused by the War, they have managed to bring out at its due date the 117th edition of the "Post Office London Directory with County Suburbs." There is a slight decrease in the number of the pages of the present volume. Sixty-two new trade headings have been introduced. An examination of the number of streets in the more distant parts of the Metropolitan area shows that no inconsiderable number of small tradesmen have during the past year given up business; though, as the publishers remark, it is curious that there has been no increase whatever in the number of cases of bankruptcy or liquidation in the last two years. Price: One vol. 40*s.*, two vols. 43*s.* 6*d.* The "London Directory," bound separately, can be obtained for 32*s.*

We have received Messrs. F. C. Mathieson's "Highest and Lowest Prices, and Dividends and Crushings" of shares of mining and kindred companies for the past six years, with position of the properties, capital, &c., price 1*s.*; also "Mathieson's Handbook for Investors for 1916," price 2*s.* 6*d.*

"*Dividend Income-tax Tables.*"—For the use of Secretaries, bankers, accountants, &c., price 6*d.* (London: Effingham Wilson.)

Debts recovered and paid over promptly.

The "Stock Exchange Year-Book" for 1916 has been issued this week. Such a well-known and useful work needs little commendation. It condenses into the smallest amount of space a great deal of information relating to the origin, history, and present position of each of the public securities and joint stock companies known to the markets of the United Kingdom. There is very little addition to the number of pages in the present edition; they now total 2,278. Copies can be obtained from the publishers, Messrs. Thomas Skinner and Company, 76-81 Gresham House, E.C., price 35*s*.

PELMADULLA RUBBER.—Interim dividend of 10%, less tax, on Ordinary.

PHILADELPHIA COMPANY.—Quarterly dividend of 1½% on Common stock.

PORTSMOUTH UNITED BREWERIES.—Dividend of 10% on Ordinary, making 20 per cent. for the year.

PROVINCE OF BUENOS AYRES WATERWORKS.—Final payment at the rate of 4% per annum on Ordinary "A" (Extension) shares.

ROBURITE AND AMMONAL.—Interim dividend at rate of 10% per annum.

ROYAL DUTCH.—Interim dividend of 15%.

SANDERSON MICHAEL AND SON.—Dividend of 5%, less tax, on Ordinary for year.

SELANGOR RUBBER.—Third interim dividend of 8*d*. per share, less tax.

TILBURY CONTRACTING AND DREDGING.—Dividend of 3 for year.

WITBANK COLLIERY, LIMITED.

(Incorporated in the Transvaal.)

DIRECTORS' REPORT for the Year ended 31st August, 1915: to be submitted to the Fifteenth Ordinary General Meeting of Shareholders, to be held in the Company's Board Room, Cullinan Building, Johannesburg, on Friday, 28th January, 1916, at 12 noon.

GENTLEMEN,—Your Directors beg to submit their Report, together with the Reports of the Consulting Engineer and the Manager, for the year ended 31st August, 1915, and the Financial Statements made up to that date.

PROPERTY.—Your Company's property holdings remain as last reported, viz.:—

Witbank, Freehold	2,428 morgen.
Joubert's Rust, Freehold	1,057 morgen.
Uitspan, Freehold	225 morgen.
Portion of Blesbokkaagte, Mineral Rights ...	506 morgen.
	4,216 morgen.

equal to about 8,920 English acres.

MINING OPERATIONS.—The Reports of the Consulting Engineer and Manager give full details of the past year's operations.

From the attached Statements it will be noticed that the output reached a total of 791,323 tons, being a decrease of 79,782 tons upon that of the preceding year.

FINANCIAL.—The Appropriation Account for the twelve months under review may be summarised as follows:—

Balance brought forward from previous year ...		£76,658 7 6
Profit realised during the year		67,396 4 9
Interest, Rents and Sundry Revenue		1,428 3 4
		£145,482 15 7
Less—		
Audit Fees for previous year	£262 10 0	
Government Tax on Profits for previous year	3,691 7 0	
Income Tax to 30th June, 1914 ...	1,841 15 6	
Capital Expenditure for past year...	1,681 17 1	
Dividends Nos. 20 and 21, declared during the past year	42,000 0 0	
Directors' extra remuneration ...	1,500 0 0	
Tar Contract Settlement	10,000 0 0	
Sundry Items	805 11 10	
		61,784 1 5
Leaving a balance to be carried forward of		£83,698 14 2

The following items of Capital Expenditure have been incurred during the past year:—

Buildings	£742 0 5
Machinery and Plant	2,271 9 0
Reservoirs, Surface Works, &c.	94 18 10
Uitspan Equipment	2,376 16 5
	£5,485 4 8
Less—	
Received by sale of Freehold Stands in Witbank Township	£1,242 0 0
Furniture, Livestock, Vehicles and Harness written off	184 11 .
	1,426 11 2
	£4,058 13 6

DIVIDENDS.—On the 28th February, 1915, your Directors declared an Interim Dividend No. 20 of One Shilling and Sixpence per share (7½ per cent.) for the first half-year, and on the 31st August, 1915, a Dividend No. 21 of Two Shillings and Sixpence per share (12½ per cent.) for the second half-year, making 20 per cent. for the year.

You will be asked to confirm your Board's action in the matter.

WITBANK TOWNSHIP.—It will be observed from the Notice to Shareholders embodied in this Report that a Special General Meeting of Shareholders has been convened to follow immediately after the Annual Meeting on the 28th January, 1916, for the purpose of considering and if thought fit passing a Resolution authorising the extension of the objects of the Company. This Special Meeting has been convened, as your Directors wish to enter into an arrangement with the Company's Township at Witbank for the supply of electric light, which can be done at a small capital cost and a profitable basis, but are advised that there is a doubt as to whether, from a strictly legal point of view, they have the necessary authority under the Company's Articles of Association.

In the event of such Resolution being adopted it will be submitted for confirmation at a subsequent meeting called for the 19th February, 1916.

MANAGEMENT.—Your acknowledgments are due to your Consulting Engineer, Mr. D. Wilkinson; to your Manager, Mr. J. K. Addie; to your Business Manager, Mr. F. A. Gillam, and to the Staff generally, for the zealous and able manner in which they have carried out their duties during the past year.

DIRECTORATE.—In accordance with the provisions of the Company's Articles of Association, three of your Directors, Messrs. E. A. Wallers, A. G. Gill, and W. H. Dawe, retire from the Board by rotation, but, being eligible, they offer themselves for re-election.

AUDITORS.—The retiring Auditors, Mr. J. P. Ablett and Messrs. C. L. Andersson & Co., being eligible, offer themselves for re-appointment. You will be asked to appoint Auditors for the current year, and to fix the remuneration for the past audit.

We are, Gentlemen, Obediently yours,

W. H. DAWE, Chairman.
J. H. RYAN,
H. A. ROGERS,
E. GOLDMANN,
J. JEPPE,
C. MEINTJES,
P. DREYFUS,
